This is Real Talk

Three months ago I advised the purchase of

KLIMAX and **KORELOCK**
DOORS

Since then prices have advanced beyond anything you dreamed of. I now say that prices will continue to advance beyond anything you dream of now. Having a car or two of

KLIMAX and **KORELOCK**
DOORS

on order or in your Warehouse NOW means having something you will be needing badly soon! and something that will cost you 25% more within the next few weeks! The demand for these Doors is far exceeding the output, more so than we are willing to believe. Now is certainly the time to stock up! Better think this over and give me a call via phone, wire or letter.

Introducing You to the Lumber Users of Your Community

On this page are reproductions of three full page advertisements appearing in magazines that circulate in every community in the United States. They have been read by thousands of lumber users—lumber users all living within the trade territory of some retail lumberman. They all carry the line: **ASK YOUR DEALER FOR LONG-BELL LUMBER.** They carry a message to every reader that Long-Bell lumber has an outstanding quality.

Did you ever stop to think that, if you were a dealer in **LONG-BELL** lumber, these widely read advertisements would serve as a guide to your lumber yard? The name **LONG-BELL** and **LUMBER** are becoming synonymous. Dealers in that brand are coming to have a tremendous advantage—an asset that cannot be over-estimated.

The Long-Bell Lumber Company
R. A. Long Bldg. Kansas City, Mo.

OUR PRODUCTS

Southern Pine Lumber
Oak
Oak Flooring
Gum
Creosoted Lumber

Creosoted Posts
Poles
Piling
Ties and Wood Blocks
California White Pine

The Name Behind the Lumber

Behind every piece of **Long-Bell** lumber there is more than forty years of lumber experience and more than a quarter of a century of lumber milling. Into every piece of our product goes our entire reputation, because we brand every piece with our trade-marked name—

Long-Bell
THE MARK ON QUALITY LUMBER

With 13 mills and lumber manufacturing plants, every one equipped with the latest word in lumber-making machinery, it is our pride to produce as nearly a perfect product as it is humanly possible to make. We add to our equipment a rigid adherence to grading rules and a maintenance of extreme standards of workmanship.

The Long-Bell Lumber Company is the largest manufacturer of Southern Pine in the United States. It puts its name on its entire product—500 million feet a year. Look for the name on these materials:

Southern Pine, Hardwood, Oak, Flooring, Creosoted Lumber, Ties, Posts, Poles, Piling and Wood Blocks.

Ask your dealer for **Long-Bell** Brand.

The Long-Bell Lumber Company
R. A. LONG BLDG. KANSAS CITY, MO.

This is The Mark on Quality Lumber

Long-Bell

NATURE gave to Southern Pine its wonderful Strength and Durability, but it is a job of the manufacturer to give to lumber Quality and Uniformity. This can be accomplished only by improved milling methods and careful grading. The products of The Long-Bell Lumber Company have forty-four years of lumber experience behind them. For a quarter of a century its mills have striven for a goal, and that goal was a lumber so nearly perfect that it would be worthy of the name **Long-Bell**. The goal has been reached. Every piece of the 500 million feet annual output now bears the trade-marked name—**Long-Bell**. It is the company's mark of accomplishment. It is the consumer's mark of assurance.

Ask Your Dealer for **Long-Bell** Brand.

The Long-Bell Lumber Company
R. A. LONG BLDG. KANSAS CITY, MO.

Making Lumber in a **Long-Bell** Mill

**Shop
Grade**

REDWOOD

Clears

Our "Shop Grade" is excellent for cutting up for window and door frames, it is also ideal for cabinet and interior finish and trim work. Try a sample shipment.

Pacific Lumber "Clears" provide the right kind of stock for your needs in shelving and wide panelling material. The firm name ensures the quality.

MAPLE

—and Prompt Shipment

As extensive producers of Hard Maple we are fully prepared to fill orders immediately. You need experience no difficulty in securing your Maple quickly for we can make prompt shipment.

Our Maple is especially selected for use in Automobile, Vehicle and Implement work. With it you can be certain of building a high value into your product.

John I. Shafer Hardwood Co.
SOUTH BEND, IND.

Lower Your Production Cost

No doubt you, like most concerns in your line, are trying to reduce your production costs. By saving labor the

Huther Bros. Dado Head

will help you do this. It will cut perfect grooves of any width either with or across the grain, and makes the most intricate cutting seem easy.

Will fit any saw mandrel or rig and has simple no screw adjustment. Requires but little power to operate.

Send for one on approval. May be returned at our expense if unsatisfactory.

Kiln Dried

Mill Cuts up to 85 foot
Lengths.

Up-to-date Plant on
East Coast of
Vancouver Island.

Good Harbor Taking
Vessels drawing up
to 32 feet.

Special facilities for
Shipment by Rail or
Water to all Parts.

GENOA BAY LUMBER CO.

- Genoa Bay, B. C.

Dealers in Lumber, Lath, Cross-Arms, Mouldings, Doors, Sash, Shingles

Telegraph Address, Duncan, B. C.

Code: A.B.C. 5th Edition

Phone 25 Duncan

WE ARE CUTTING LOGS LIKE THESE EVERY DAY—ANY LENGTH UP TO 120 FEET—WE
LOG AND MANUFACTURE OUR OWN TIMBER—CAPACITY 80,000 FEET

Our Specialties:

Long Fir Timber—Planking Decking

Cutting orders for 2" in long lengths
either Common or Clear (obtained as
side cut).

Planer capacity 6" x 30". We do not
operate dry kiln, but can arrange to
air-dry in our yard to requirements.

Our Mill is on Canadian Pacific Railway with Rail Connection (Five
Miles) to Tidewater on Alberni Canal, Navigable for all Vessels

BAINBRIDGE LUMBER CO., Ltd.

Bainbridge Lumber, Victoria. Service at Bainbridge

SIMONDS

WIDE BANDS AND LARGE CIRCULARS

The highest achievement in Saw Making. Matchless saws, either Band or Circular, have the foundation and quality necessary to the economical operation of mills or woodworking factories. They are producers that stand up under severe tests. The best in saws means Simonds beyond all others.

Let us advise you on your saw problems.

Simonds Canada Saw Co. Ltd.

Feeding the Camp

IF that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Why Building Costs Keep Soaring

In the columns of the "Canada Lumberman" there have appeared from time to time many articles, of both an editorial and news character, urging retail lumbermen to enter upon an aggressive campaign, so far as their customers are concerned, to build now.

There is implanted in every human breast a desire to possess a roof over one's head. Paying rent comes to be regarded in the course of a few years as a monotonous, stereotyped and unprofitable proceeding. A city of home owners is generally a much more prosperous, contented, happy and progressive community than one where the residents are of that migratory and irresponsible class who are here today and away tomorrow. These remain in one centre as long as seasonable conditions are favorable, or fancy dictates, but depart, at the first beckoning call of newer communities or larger centres, only to discover in the end that "distance lends enchantment to the view." After all there is not such a vast difference in localities where one resides if there is evidence of public spirit and local loyalty and a sincere desire to co-operate in any organized effort for the up-build, advancement and prosperity of the hamlet, village, town or city.

The United States Department of Labor, through its Information and Educational Service, did particularly effective and timely work in stimulating "the build now," "buy now," and "own your own home" campaign. It pointed out that the man who owns his own home, is a valuable asset to the community in which he resides and has, all things considered, a better standing than the man who is content to keep his family in a rented house. It also urged that where an employer learns that a man owns his own dwelling or is paying for one, he has greater respect for him and is more willing to trust and advance him.

There is not only the patriotic side, but also the sentimental and the aesthetic as well. This is found in the memories and associations, happy reunions and joyous celebrations around the old homestead.

The aggressive and up-to-date lumber dealer should, in his pub-

licity campaign, emphasize the fact that the ordinary family derives great pleasure, comfort and security in its home and is accorded the highest respect in the community. If the dealer states that he has in his office all sorts of plans and ideas that other people have found useful and that these will be of help to any prospective builder, the truth is being driven home that right now is the time to build, that prices are advancing all the while, that labor is going to cost more and all materials that enter into the equipment of an attractive residence are on the upward grade, such as lighting fixtures, plumbing, hardware, etc.

The cost of construction has been steadily increasing in the last twenty years, and it has been the record of builders that each delay in the hope of better prices has resulted in added cost to the projected improvement. From the lessons of the past surely one can learn a great deal and be guided by the experience and insight of the days that have passed.

One of the most effective slogans of the campaign already referred to sets forth that after the American civil war, building costs never came down to pre-war prices, and concludes: "Any man who takes opportunity by the horns will not be disappointed and will be far ahead of the man who waits. You will find when you investigate that owning your home is a very simple thing and not nearly so formidable as you once thought it. Every man has it in his power to own a cosy place which he calls "My home."

Making Your Business Earn Money

The weather is always a fruitful topic of conversation. It is the one common plane on which high and low, rich and poor, educated and illiterate, can meet and discuss with safety and ease. The only danger, perhaps, lies in the fact that a topic which is in the mouth of everyone is apt to grow threadbare and monotonous. By the same process of reasoning there has been so much said in the columns of the "Canada Lumberman" of late in regard to figuring costs and knowing overhead, that one may easily err on the side of presenting readers with too much of a good thing, or talking an otherwise interesting subject to a slow and painful death.

It is from the successful and prosperous business firms that the smaller operator can learn many lessons, and on this point one dealer, who for many years had been marking time and making a little money occasionally, but not in any way equal to the amount he should have earned on his investment and turnover, states that for several months now he has been reaping splendid results. He has raised the selling prices of his lumber so that he knows definitely that the "spread" between the wholesale figure and the retail figure is sufficient to take care of all proper charges and expenditures. In the first place, a proper system of checking has been adopted, and when an estimate is given and a contract secured, each item is checked up and, more particularly, the labor end, so that a close tab is kept on costs.

Not only is this method followed in the yard itself, but in the planing mill, and if labor costs on any contract are found too high there is an investigation and an effort made to locate the weakness so that the mistake will not be repeated. Every item of purchase and expenditure comes under close inspection. Now, as a result of system, foresight, sound business sense and sane judgment, the annual returns are most encouraging. Buying is carefully done, advantage taken of all discounts, collections promptly made, and the best service possible rendered. In this way the plant in question, which is located in a prosperous Ontario town, is building up a splendid and rapidly expanding connection. Nothing is taken for granted and every car of lumber is measured and a close watch kept to see that all stock is up to specifications and grade. This may seem a rather elaborate program, but it has paid the firm many thousands of dollars and is another exemplification of the oft reiterated declaration that success comes, not by accident or a turn in the wheel of fortune, so much as by thought, system, care, patience and perseverance and, last but by no means least,—service.

How Great Industry Has Expanded

Going back over ten years, the progress of the Canadian pulpwood, pulp and paper industries has been phenomenal. There are two principal reasons for this expansion—the practical removal of the tax upon paper going into the United States—the duty on paper is above 5c. per pound—and the policy of prohibiting the export of pulpwood cut on Crown lands. The possibilities of the pulp and paper industry have not been lost sight of by many of our large lumber companies, and in Eastern Canada particularly we have seen the construction of immense plants by lumber companies and the extension of others established in the earlier years. After all, it is a logical expansion by lumber concerns—they possess the raw material, and in many cases suitable sites adjacent to water powers, and the organization to handle efficiently such a rapidly growing industry.

The official figures of the exports of pulpwood, pulp and paper for the fiscal year ended March 31 last are now available. They tell the story of progress at a glance:—

Paper and manufactures of	\$26,123,215	\$37,865,330	\$49,165,795
Wood pulp, mechanical	14,032,920	19,133,813	30,226,856
Wood pulp, mechanical.	6,371,133	6,487,079	4,479,915
	\$46,527,268	\$63,486,222	\$83,872,566
Pulpwood, unmanufactured.	6,448,189	8,339,278	15,386,600
Total	\$52,975,457	\$71,825,500	\$99,259,166

The United States were our largest customers for pulpwood, pulp and paper, so will be seen by the following tables, Canadian printing paper was exported as under:

	Cwt.	Value
United Kingdom	9,310	\$ 38,484
United States	11,880,069	36,031,358
Australia	643,101	2,081,911
New Zealand	242,336	862,402
Other countries	473,726	1,703,866
	13,248,542	\$40,718,021

The chief foreign markets for Canadian pulp during the year were:

	Cwt.	Value
Chemical Pulp		
United Kingdom	140,364	\$ 611,399
United States	7,414,825	26,256,265
Japan	639,997	2,775,486
Other countries	137,744	583,706
Mechanical Pulp		
United Kingdom	2,528	3,033
United States	3,453,149	4,418,555
Other countries	53,049	58,327

The value of the United States as a buyer of these commodities is made doubly so at present by reason of the financial situation, and the adverse trade balance against us with the United States. It is urgent that we should sell more and more goods to our neighbors, and so redress the balance which unfortunately has been so largely against us for years. The falling off in ground wood pulp sold last year was due to the high water in the Eastern States and the increased supply of pulpwood.

The pulpwood figures are of interest in connection with the agitation in the States for the removal of the embargo on wood cut from Crown limits. The figures show how the United States mills are becoming more and more dependent upon Canadian supplies, and explain the anxiety of those connected with the U. S. paper industry to tap more freely our pulpwood resources, which are not so extensive as were at one time thought. Our own paper people, on the other hand, are not gratified at the increasing exports of raw material, it being contended that if exports of all pulpwood were prohibited it would compel more U. S. companies to build plants in Canada or give increased work to our present plants—thus materially benefiting our country. There is, however, the danger of retaliatory measures which must not be overlooked. Many things which are desirable are not always expedient, and the total prohibition of the export of pulpwood would certainly lead to an agitation for retaliation in some form or another.

In connection with this subject, the following information is significant as showing the increase in the exports to the United States of pulpwood. The total has grown from 982,671 cords, valued at \$6,448,189 in 1917, and 1,002,127 cords, valued at \$8,339,278, in 1918,

to 1,597,042 cords, valued at \$15,386,600, in 1919, an increase in one year of practically 100 per cent. It is estimated that the quantity of manufactured pulpwood exported last year was sufficient to have made 1,064,694 tons of paper, or about one-half the total quantity of newsprint used in the United States where the wood was sent. Sold at \$75 a ton, the present market price in the States, this quantity of paper would have brought into Canada \$79,852,050, instead of the \$15,386,600 received for it in the form of wood.

The Badge of the Happy Home Owner

It is noted by the Musicians' Journal that the Trades Council Union News of St. Louis in an editorial in the current issue advocates a policy of each worker owning his own home. Better advice could not be given. Success in life depends upon thrift, and thrift is best cultivated through ambition and proper surroundings.

It is properly contended that the man who owns the house he lives in is going to take care of it, and at the same time take better care of those who live in it. Find the man who owns his home and you find the man who gives his children better educational opportunities, clothes and feeds them better.

Attention is also called in the St. Louis Trade Council News to the campaign of the United States Department of Labor to "Own Your Own Home." This campaign is conducted through local committees composed of town or city officials and representatives of leading associations interested in civic progress; through bankers, ministers, editors, teachers and members of women's clubs; through mercantile associations and labor unions. Thus is interest aroused in the building of dwellings and other structures. Community houses of various sorts are focusing attention. These include libraries, club houses and recreation centres.

Building gives employment to men of many trades, and it has the advantage of stimulating business enterprises of various sorts. The materials close at hand are likely to be used, and as every community has a certain proprietary interest in each new structure nothing more surely awakens civic pride than extensive building operations.

Consider for a moment the raw materials to be found in the average town and district for building purposes. Any move made in the erection of houses either for personal or company or renting purposes is a goo done and many allied trades are given employment. There is no better time to build than the present, whether one undertakes the enterprise on a big or small scale.

What the Yardman Should Observe

It is said that statistics make dry reading and it does seem that too few retail lumbermen and others give proper consideration to the study of costs on the ground, perhaps, that it is easier to guess or to estimate, or mayhap they have no definite idea of how costs should be figured or on what basis. Many firms do not know what their overhead amounts to, and if asked to tabulate what constitutes overhead charges, they would either be at a complete loss, or would eliminate—perhaps unintentionally—some of the most important items. How many men in their inventories ever deduct ten per cent. for depreciation on buildings, machinery, fixtures, etc., or take into consideration that their waggons, motor trucks, horses, harness, etc., are wearing out. Do they make proper allowance for all this?

Then again, certain lumber dealers own the buildings in which they do business, or the yards in which their stock is piled, and fail to charge up a specific amount annually for rent. By all means this should be done, as the money invested in land and buildings should bring in an adequate return, and if leased to a tenant, would certainly do so.

How many yard men fail to place a just estimate upon the value of their own services, or those of the members of their family? Perhaps there is a son or daughter, a nephew or niece, employed in the office, or some other department, and because it happens to be in the family no definite charge is made in the salary account to cover the work done by these persons. This is all a mistake. The retailer

who fails to include a salary for himself equal to what he would be worth to anyone else—and, also, what the work done by members of his own family, or relatives would cost him if performed by outsiders—is certainly not figuring his overhead costs on the proper basis. By all means, salaries should be included for the proprietor and any working member of his household, and he should also make allowance for a reasonable percentage to cover his investment. The subject of figuring costs and knowing overhead expenses is, in these days, a very practical and pertinent problem with every retail lumber dealer, who wishes even to hold his own, let alone forge ahead in the game. As one authority has said, the man who does not know that he is selling his merchandise at a loss—or deliberately does so—is the type of competitor who brings bankruptcy to the trade.

Telephone Service Needs Gingering Up

The cost of Bell Telephone service in Canada has been increased, but so far as Toronto is concerned there is no evidence that this service has improved. The cold fact is that the service is bad. These are busy days and business men cannot afford to spend the time frequently required to get in touch with customers. There is delay in getting the operator's attention, a very big percentage of the calls are wrong numbers, many conversations are interrupted and the administration, generally, seems to be very loose.

These are times when people expect "service" and for the most part are ready to pay for it. However, there is no disguising the fact that there is a very general feeling that we are paying for a satisfactory service and getting a decidedly unsatisfactory one. Is the management inefficient? If so, it is due the Canadian public that the weak points be strengthened up without further delay.

Oh! What a Fall From Days of Old

The general public, having become accustomed in past years to respect the utterances of the Canadian Manufacturers' Association, as the result of the prominent connection with this association of such names as Senator Frederic Nicholls, Mr. W. K. McNaught, C.M.G., Mr. W. H. Rowley, Hon. Nathaniel Currie, Sir Chas. Gordon, Mr. Lloyd Harris, Mr. Robert Hobson, Hon. C. C. Ballantyne and others scarcely less prominent industrial figures, must have noted with considerable disappointment the recent explosion of one of the members at the annual convention, in which he made use of language not generally accepted, to say the least, as forming part of a gentleman's vocabulary. That the president of the association, Mr. W. J. Bulman, an insignificant Winnipeg manufacturer, sat quietly by and allowed the member to proceed, makes him equally responsible. The incident doubtless is without significance in itself beyond the fact that it indicates that the standard of C.M.A. officials is, temporarily we hope, at a very low ebb.

The Canadian Manufacturers' Association is an organization on whose shoulders grave responsibilities regarding the industrial development of our country rest. We do not believe the members of that association, even a small fraction of them, are favorable to the use of such unbridled and offensive utterances as those made by a Mr. Harris on the occasion referred to. If the Canadian Manufacturers' Association is to become an arena for such disgraceful brawls as the recent demonstration of this man's boorishness, the influence of the organization cannot fail to deteriorate very rapidly from the high standard of past years.

B. C. Lumber Commissioner Arrives

Major James Brechin, of Vancouver, who returned some time ago from overseas and was recently appointed by the British Columbia Government Lumber Market Commissioner for Ontario and the east, has arrived in Toronto and opened an office at 409 Kent Bldg., corner of Yonge and Richmond streets, which will be his headquarters.

Major Brechin is an experienced lumberman and was for some years manager of the King Lumber Company at Cranbrook, B.C. His mission to the east is to develop trade and increase the demand for forest products from both the Coast and Mountain regions. He

has already called upon several leading builders, contractors, architects, retail lumbermen and others, and by his gentlemanly bearing and earnest, quiet manner has created a large number of friends. Major Brechin will undertake work of the same scope and character in the propaganda line as was carried out by L. B. Beale, former British Columbia Lumber Commissioner for Ontario, and later representative of the British Columbia administration in Great Britain. Mr. Bale is now one of His Majesty's Trade Commissioners, with headquarters at Winnipeg.

Major Brechin is associated with the trade extension department of the B. C. Forest Branch, and will conduct an aggressive campaign on behalf of that branch. The work will be undertaken on a broad basis. Major D. D. Young is the B. C. Lumber Market Commissioner for the prairie provinces, and was appointed at the same time as Major Brechin.

Canada's Remarkable Lumber King

Mr. J. R. Booth, the veteran "lumber king," of Ottawa, who is now in his 93rd year, had the misfortune to fall recently and break one of his arms, but this was only a mere trifle to a man of the sturdy physical frame and vigorous build of Mr. Booth. He made his appearance at his mammoth plants next day in spite of his fractured arm.

It will be remembered that about five years ago Mr. Booth, when supervising some construction work, was hit by falling timbers and had one of his legs broken, besides receiving internal injuries. He rallied from the effects and was out again in a few weeks. The many friends of Mr. Booth confidently believe that his iron constitution and open air life will carry him long past the century mark.

It will also be recalled that Sir James Ball, British Timber Controller, on his recent visit to Ottawa, took a walk over the extensive lumber yards at the Chaudiere Falls, in company with Mr. Booth. Just as he was departing, Sir James jocularly remarked, "Well, Mr. Booth, I am coming back ten years from now and hope to have the pleasure of having another stroll with you."

"All right," rejoined "J. R." with a smile, "you'll find me on deck and I'll be glad to give you a hearty welcome."

Some Editorial Short Lengths

Japanese lead pencil manufacturers will try out British Columbia cedar. The low land timber has been found too soft for this purpose, but it is hoped that the cedar on the benches and in the drier districts will prove satisfactory. Recently Japan has been taking considerable quantities of British Columbia cedar for finishing purposes.

It takes 15,000 feet of lumber to build the average dwelling. Suppose the price of lumber advances \$1.00 a thousand. Suppose it advances \$2.00. Suppose it advances \$3.00. The first means an increased construction cost of only \$15.00; the second, \$30.00; the third, \$45.00. Honestly, now, would that stop anyone from building who really wanted to build? remarks "The Retail Lumberman."

"The interest of Labor is not in the reward which can be obtained after accidents have happened, though that is important; the real interest of labor lies in preventing accidents," says the President of the Trade & Labor Congress of Canada. These are terse and timely words spoken at the annual meeting of the Ontario Safety League. While we may have been unfortunate enough to have left the barn door open, it is good sense to lock it before another horse is stolen.

A resolution on "trade relations" created a lively discussion recently among lumbermen and, for the present no definite agreement has been arrived at by the wholesalers and the retailers in regard to their respective status and definite sphere of action. On retail lumber dealer, when the subject of "trade relations" was mentioned, enthusiastically endorsed the proposition and intimated that he would gladly trade his mother-in-law and sister-in-law for a carload of 2 x 4 mill run white pine.

Making National Survey of Canada's Timber

What Stock Has The Dominion On Hand, What Future Crops Can Be Looked For, and By What Means Can Production Be Sustained and Measured

By James White, Ottawa, Commission of Conservation

James White, Ottawa, Ont.

Regarding the survey of the forest resources of Ontario, the Commission of Conservation has been assured of the fullest co-operation of the Ontario Government in this undertaking and proposes to start at once on the compilation of the data.

It took practically four years to complete the report on the "Forests of British Columbia" which has lately been issued and it is expected to take nearly as long to prepare a similar report for Ontario. Much will depend on the assistance received from the various departments of the government and from the timber owners. It is, of course, impossible for the Commission to attempt to cruise the whole province and since such a large proportion of the merchantable timber is in private holdings, for

which the owners have detailed cruises, it would be extremely wasteful both of time and money, to duplicate this work. The Commission is therefore depending on the lumbermen, as it did in British Columbia, to supply the information they possess. It may be pointed out that, in British Columbia, detailed cruises were secured on 70 per cent. of the alienated lands and in only two or three unimportant instances was the information withheld when available.

Access to Cruises and Reports

Through the courtesy of the Minister of Lands, Forests and Mines of Ontario, the Commission will have access to all the cruises and reports in his department. Other sources of information will be cruisers, rangers, surveyors, explorers, etc., who have knowledge of local conditions, and, in addition, a considerable amount of field work will be conducted to check and connect up the data received from other sources.

The individual reports will be treated as confidential and used only as a basis for arriving at totals for large drainage areas embracing many holdings. It is hoped that sufficient data will be collected to permit of a general classification of the land as to whether it is wasteland or is suitable for agriculture or for forestry. Maps will be prepared, showing in a broad way the various forest types as regards composition and yield.

The report on the "Forests of British Columbia" has been received with the marked appreciation of the timber owners, lumbermen and others interested in the development of the forest resources of that province and it is felt that information of a similar nature should be available for the rest of the Dominion.

Similar Surveys in Other Provinces

The Commission of Conservation has completed a survey of the forest resources of Saskatchewan but, owing to the illness of the forester who conducted the investigation, the completion of the report has been much delayed. It is hoped, however, that it will be in the hands of the printer at an early date. In 1909-10, a similar survey of the forests of Nova Scotia was made by the Government of that province. When completed, the report was published by the Commission of Conservation.

Much data respecting the forests of Alberta and Manitoba have been obtained by the Forestry Branch, Dept. of the Interior, and when supplemented by some further investigations, will be available for publication. The forests of New Brunswick are being surveyed by the Government of that province. Ontario and Quebec, therefore, are the only provinces in which a very large amount of investigatory work is required and, if the survey of Quebec's forests is undertaken by the Quebec Government, we may look forward with confidence to the completion, at a comparatively early date, of the survey of the forest resources of Canada. Then and then only, will we be able to formulate with confidence specific measures for the

areas of Canada that contain forests and for the areas that are suitable only for the growth of forests. Unfortunately, when completed, this survey will demonstrate that the optimistic statements respecting our "illimitable" and "inexhaustible" forest resources have no foundation in fact.

Canada Needs Increased Production

Forests are primarily valuable for the production of wood. At the present time, Canada needs increased production as never before, but the fact must not be overlooked that we shall require sustained production for several generations in order to meet the obligations which the war has imposed on us. That our forests may be used to the best advantage, it is necessary that we first know what stock we have on hand; second, what future crops can be looked for; and third, what means can best be adapted to sustain and increase production. This knowledge is perhaps more valuable to those engaged in the forest industries than to the governments since a knowledge of the available supplies will enable them to so plan their operations that their plants may be kept running. The increasing shortage of supplies is becoming a serious matter, especially for the pulp industry and the problem of reproduction either naturally or by planting, has become a live issue. The Commission of Conservation is conducting an extensive investigation of this subject and with a knowledge of the virgin supplies, basic information will be available as to the practical possibility or advisability of adopting means of maintaining the productivity of their timberlands.

The Commission appreciates the support which it has received in the past from the "Canada Lumberman" and from the other technical papers and the newspapers of Canada, and desires to thank them for their offer of co-operation in this project.

City Repeals Anti-Shingle Ordinance

The anti-shingle ordinance, prohibiting the use of shingles for wooden roofing and requiring roofs to be made of fire resistive materials was repealed recently by Dallas, Texas. The city commission was called into extra session by Mayor Wozencraft. The ordinance was repealed by an ordinance carrying with it the proviso that a secondary fire zone will be established in which fire resistive materials and not shingles must be used on roofs.

The anti-shingle ordinance was passed Aug. 2, 1918, "regulated the construction of roof covering for certain buildings in the city of Dallas, and requiring the use of fire resistive roofing to be used in the construction or repairing of such buildings." Existing houses with shingle roofs were allowed to stand under the ordinance, but houses constructed from the date of the passing of the ordinance could not be constructed with wooden shingles.

Mayor Wozencraft made the following statement in regard to the repealing ordinance:

"The ordinance was passed by the commission in order that the relief which is urgently needed in order that building may not be unwarrantably delayed might be given.

"The commission, and more especially Police and Fire Commissioner McGee, will look into the proposition of extending the fire limits into a secondary fire zone where fire-resistive roofs will be required, and all other regulations complied with.

"But it is not felt that this ordinance repealing the old ordinance should be held up until the details of the plan are completed.

"The commission satisfied itself that the use of fire-resistive materials adds materially to the construction of homes, and created considerable additional expense in the building of modest-priced homes. Upon further study we reached the conclusion that the cheaper grades of fire-resistive roofs were not satisfactory."

Section 3 of the ordinance passed yesterday says:

"Whereas, by reason of the unsatisfactory roofing required to be used by the citizens because their houses are to some extent rendered uninhabitable on account of rain and wind by reason of such unsatisfactory roofing; because it causes an interruption in building of homes by the citizens of the city of Dallas by reason of the operation of said ordinance, an emergency is created for the immediate preservation of the public peace, health and safety requiring that this ordinance shall take effect immediately and it is accordingly ordained that this ordinance shall take effect from and after its passage and approval."

Sawing Lumber for Export—Speed vs. Quality

The Question Arises Which Pays the Best—Some Observations on Swedish Methods in Comparison With Those Which Are Followed in Canada

By J. Ander, Montreal

J. Ander, Montreal, Que.

The "Canada Lumberman" of June 15th contained an interesting article by Mr. James H. Lane, entitled "Some Things Canadians Can Learn in Sawing". He points out, that Canadian exporters of lumber are up against a keen competition on the British market, particularly by Swedish shippers, and urges the Canadian shippers to study the methods of their Swedish competitors to enable them to secure a greater share of the trade with Great Britain than they have in the past.

Mr. Lane states that Swedish lumber is preferred by British buyers, and that £1 to £2 per standard more is willingly paid for Swedish lumber than for corresponding qualities of Canadian lumber. The reason for the preference accorded Swedish lumber is the regularity with which it

is sawn, the neatness of the cross-cutting, the attractive way of marking the lumber and the strict adherence to qualities indicated by different marks. Mr. Lane's article is very instructive and deserves every attention. I wish to add a few remarks, based on more than twenty years' experience in the lumber business, twelve years thereof in Canada and several in Sweden.

They Never Go Hand in Hand

For the Canadian sawmill owners, there seems to be one consideration that outweighs every other—speed, with, as a consequence, low cost of manufacture. In a lumber mill, however, great speed and high quality of work never go hand in hand. Our modern Canadian sawmills cut lumber very fast and very cheap, but no one can deny that the lumber is very irregular. Anyone having had experience with resawing and planing Canadian lumber knows that it often varies in thickness all the way up to 1/4 in. Some pieces are 1 3/4 or 1 7/8 in. thick; others 2 1/8 in. or 2 1/4 in. Other pieces are 2 in. in one end, 1 7/8 in. in the middle, 2 1/8 in. in the other end. If such an irregularity were only an exception it would not be so important, but irregularity is the rule and precision is the exception. This is what British and French buyers object to. For a number of purposes, they demand lumber perfect in thickness and width, and for such lumber they are willing to pay a higher price, and in order to get it, they turn to Sweden.

Swedish lumber of standard makes is absolutely exact in thickness and width. It does not vary 1/16 in. It is cut plump, so that when the deal is dry, it is exact in size. Consequently, when the British buyer resaws this lumber into boards for shooks or for other purposes, he knows to a fraction of an inch what he is going to get out of it; there is no waste, no "last piece" that is useless. With Canadian lumber a considerable waste must always be figured on when working it. The British buyer figures it pays him better to give the Swedish shippers from \$2.50 to \$5.00 per M. S. ft. more; it not only means money in his pocket, but he preserves also his peace of mind, which he finds seriously threatened handling uneven lumber.

The Canadian producer sacrifices quality to speed—the Swedish, speed to quality. The question is, which pays the best?

The Precision of Swedish Cuts

All the larger Swedish mills are equipped with log frames built to turn out perfect lumber and to get as much lumber out of the log as possible. The foremost manufacturers of Swedish sawmill machinery, the Bolinder Company of Stockholm, Sweden, build a "precision log-frame," using very thin sawblades for all diameters. It produces a faultless cut and the saw blades used are from No. 18 to No. 20 B.W.G. and the sawkerf only about 1/16 in. A log frame of this kind, coupled with the Swedish procedure of sawing, about which more below, not only cuts perfect lumber, but the logs will yield from 6

to 10 per cent. more lumber than what can be got out of them even with the best Canadian band mills.

On a cut of say, twenty million feet of lumber per year, this saving would amount to at least 1,200,000 S. Ft., worth, with present prices, about \$40,000. Considering further, that the Swedish producer will get on an average, \$3.50 per M.S. Ft. more for his lumber, c.i.f. British port, his system of sawing will assure him of another gain of \$70,000, or \$110,000, in all, on a cut of twenty million feet.

The Swedish shipper has a lower freight to contend with, but we do not take that matter into consideration, as our object is only to make a comparison between Swedish and Canadian sawing methods. That the Swedish exporter is closer to the British market is something in his favor, which cannot be overcome.

Incidentally, we might mention that the lower freight rates for the Swedish exporters, are offset by the higher cost of their logs. The larger Swedish lumber corporations keep whole armies of men taking care of their forests. The Swedish forests get the same attention as an average mortal gives his children—with the result of course, that the logs, delivered at the mills, stand in a very high price, but also with the result that the forests are preserved and their wealth will never give out.

Yearly Gain vs. Increased Sawing Cost

Against the extra profit of \$110,000, mentioned above, the Swedish manufacturer has to figure on a considerably higher cost of sawing the lumber. He employs a larger number of men in his mill than what a Canadian manufacturer does for cutting an equal quantity of lumber.

The whole question in a nutshell is, therefore, this: Which amounts to more, the \$110,000 yearly gain on a twenty million feet cut, or the increased cost of sawing? That is a matter for Canadian manufacturers to study.

The Swede swears by his methods and claims that not only do they bring more money into his pocket, but they insure him also a world market. South Africa and Australia are large buyers of Swedish lumber and the reasons for this, as was clearly shown by an article in the "Canada Lumberman," a year or so ago, are exactly the same as those that make the Swedish lumber preponderant on the British market.

One or two attempts have been made to employ Swedish sawmill machinery in Canada, but the results of those attempts have not been very satisfactory. In the first place the machines employed were not modern, but very much out of date, and in the second place, the Swedish methods were not carried through in a consistent way. The success of the Swedish machines depends upon their being used for the working procedure they are designed for.

The Swedish Methods in Detail

The Swedish method of sawing starts in the boom, where the logs are sorted as to sizes. A 10 in. log is not cut with the same saw-setting as a 9 1/2 in. or 10 1/2 in. log, from which slightly different sizes are taken out. The Swedish manufacturer has diagrams, showing to a fraction of an inch, what sizes are to be derived from all different log diameters.

The larger Swedish mills are equipped with quite a number of log frames, so that the different sizes of logs are easily handled. In smaller mills, the saw-setting is changed for different sizes, morning and noon, to prevent accumulation. This method requires very extensive booms with numerous pockets but the quantity of slabs and edgings going out from a Swedish sawmill is extremely small. Burners for taking care of sawmill waste, would be considered a monstrosity.

Wherever possible, the waste, after every foot of lumber that could be utilized for shooks or similar purposes, has been taken care of, is cut up by slab-chippers, and used by the pulp-mills. At other sawmills, situated too far from a pulpmill, the edgings and slabs are converted into charcoal.

How the Appearance is Preserved

The lumber is not cross-cut in the mills. The cross-cutting or trimming is done by portable electric trimmers just before the lumber goes into the vessel. At the same time, the marking, which Mr. Lane speaks about, takes place. The trimming of the lumber, after it is

dry, means that the ends are bright and neat, and not split, which all considerably improves the appearance of the lumber.

I trust that the above remarks may be of interest to progressive Canadian manufacturers. It would, no doubt, be of a tremendous interest to the Canadian lumber trade, if some large Canadian corporation would adopt the "Swedish system" in one of their mills, installing modern Swedish machinery in order to manufacture lumber, which would be able to compete with the Swedish on the British market. If carried through in the right way, there is no reason why such an attempt should not turn out a success. It would demonstrate how the Canadian forests could be made to yield from 6 to 10 per cent more lumber from the same amount of logs, and it would open up for Canada a larger market for its lumber.

It would undoubtedly take some little time to convince the British public that the Canadian lumber cut by Swedish methods would compare with the Swedish lumber in quality, and the old question would, no doubt, be asked: "Can anything good come from Nazareth?" By degrees, however, this incredulity would be overcome, as "seeing is believing."

Laurentide Dividends Grow Still Larger

When Laurentide Paper securities were bid down to 218 in the Montreal stock market recently it was hardly expected that an announcement would be made late in the afternoon that with the regular quarterly dividend of 3 per cent. the company would declare a bonus of 3 per cent. on its \$9,600,000 capital stock.

The company increased its distribution to shareholders to 12 per cent. in December last, after paying 10 per cent. for the previous year. In some quarters it is considered a sort of preparation for the division of the stock, making with what is now practically a 15 per cent dividend, new shares with dividends at 5 per cent., the stock, at present market value, to be quoted around 70.

There was a tendency when the news first became known to connect the 3 per cent. bonus with the dividends which the Laurentide Company is in receipt of from its prosperous subsidiary, Laurentide Power, but this was put aside as improbable in view of the fact that only one quarterly disbursement had been made by the latter, representing but 3/4 of 1 per cent. on the outstanding capital shares of the parent enterprise. The bonus, therefore, is, in all probability, the outcome of the earnings of the Pulp and Paper Company, the Grand Mere plant, as President Chahoon announced some time ago, being operated at capacity for several months past.

The action of the Laurentide executive, in the matter of the bonus distribution, would seem to render prospects particularly bright for shareholders, in view of the fact that officials of the enterprise are more or less committed to the policy of turning over to the holders of the pulp and paper stock annually the dividends received by the company from Laurentide Power. As these represent some 3 per cent. per year on the stock of the parent company, this would appear to be the equivalent to placing the shares on an 18 per cent. dividend basis. providing, of course, the bonus just declared becomes permanent.

Some Newsy Briefs from Ottawa

The principle of collective bargaining, as meaning the dealing by woodworking factory officials and heads with all the employees of such factories at Ottawa, has been flatly refused, according to information given the "Canada Lumberman."

The situation from the labor end with the woodworking factories at the date of writing, remained indefinite. The workers were asking for a further increase in wages and requested of the mills that they set a flat or general rate for all labor employed in woodworking plants. Negotiations which have been under way for some time, continued up to practically the end of the month when the workers staged a meeting at the Windsor Hotel and invited the employers to it. The employers did not appear.

The best information from the mills that the lumbermen could receive was that the mills, while willing to consider the demands of labor for an advance in salary, would not listen to the workers collectively, but were willing to discuss the situation, each mill for itself, with its own employees.

Secretary McLellan, of the New Brunswick Lumbermen's Association, recently returned from England where he was in the interests of the association. He predicts great things for the New Brunswick product and says that there will be fine opportunities for a good market for many years to come. He says the housing problem in the Old Country is acute and large quantities of lumber will be needed for building purposes.

Wholesalers Discussed Trade Ethics

All Members Will Do Everything in Their Power to Protect Each Retail Customer

The Wholesale Lumber Dealers' Association, Incorporated, held its monthly meeting on June 13th, at the Albany Club, Toronto, and had one of the largest turnouts of the season. Mr. A. E. Clark occupied the chair. Matters of a routine nature occupied the attention of the members chiefly during the evening.

The greater portion of the evening was devoted to an interesting discussion on the subject of trade ethics, being centered chiefly upon the proper field of operation for the wholesaler. Every member present expressed his views on the subject and it was the unanimous feeling of all the members that wholesale lumber dealers should do everything in their power to protect the interests of their retail customers.

The discussion showed, however, that it would be neither practical nor advisable to handle this matter by anything in the nature of definite regulations which might be considered as restraining trade, but rather that it should be left to each individual member.

It was brought out also by the discussion that practically every member of the Wholesale Lumber Dealers Association, Inc., is scrupulously careful to protect the interests of the retail lumber dealers, and that such complaints as may develop from time to time relate to firms or individuals who are not members of the Association.

The Wholesale Lumber Dealers' Association, Incorporated, has from the first, co-operated extensively with the Ontario Retail Lumber Dealers' Association, in order to assist the latter in its difficult work of organization, and the members felt that the goodwill they had shown to the retailers should be accepted by the latter as a definite indication of their desire to promote the welfare of the retail trade.

One of the interesting features was the passing of a resolution, moved by Mr. Alex. Gordon, and seconded by Mr. H. G. McDermid, that the Association should hold a picnic sometime during the summer. Details for the event were left in the hands of the Entertainment Committee, which consists of Messrs. F. Oliver, chairman; A. K. Johnson, D. C. Johnston, and D. Barclay.

At the conclusion of the meeting it was decided that no meetings should be held during the ensuing summer months.

St John Desires More Ships for Export

One of the biggest problems that lumbermen in New Brunswick have had to cope with in years is that of tonnage. For many months past the situation could be termed as acute for every available bit of space on wharves and in their yards was taken up with piles and there was very little, and in some instances, no room for this season's cut. The British controller of timber supplies purchased many hundreds of millions of feet of all kinds of lumber in New Brunswick and the vast majority of it is still piled up waiting shipment. Adequate tonnage was said to be available, but the price asked was too large. Representations were made to the controller and he promised to take immediate steps in the matter; for a time there was no change and much dissatisfaction resulted. To date there has been a slight change for the better and a promise is held out that more tonnage will be released later in the season to carry the many millions of feet overseas. Within the last fortnight there have been several sailings and this has helped to a great extent to lessen the strain.

Two cargoes of lumber went across within the past few days, the S. S. War Country and the S. S. War Ottawa taking away over four million feet at a value of over \$100,000. This is for reconstruction work in the British Isles and in Belgium. The S. S. Everilda also took away a large quantity and the S. S. Trojan and the War Niagara are now in port loading, while a new schooner, Irma, is expected from New York in a few days to load for the United Kingdom. It is estimated that there are still many hundreds of million feet to be removed and a large number of steamers will be necessary.

Farnworth and Jardine's Wood Circular, of Liverpool, for June 1 had the following on New Brunswick and Nova Scotia spruce and pine deals and birch: "The total import to the Mersey, including the Manchester Canal, was 2790 standards, Liverpool receiving a small proportion. Satisfactory consumption, considering the depleted condition of stocks is noticeable. The demand is fairly steady for early arrivals, but business is difficult to arrange for more distant delivery, chiefly due to the very large quantities to come forward on government account. Tonnage, particularly for private business, is strictly limited. Pine deals-stocks practically exhausted. Birch-logs nominal import to Liverpool, deliveries accounted for the bulk of the stock on the quay at the end of last month, leaving the present holdings extremely light, viz. 6,000 cubic feet. Planks, arrived freely, good consumption; stocks not excessive."

Work of Lumbermen's Safety Association

Principle of Current Cost Plan Endorsed—Adoption of Merit Rating System and Placing Doctors Under Direction of Employers Advocated

The fourth annual meeting of the Lumbermen's Safety Association was held at 16 Castle Building, Ottawa. H. I. Thomas, the president, presided and there were also present: Messrs. Sir Henry K. Egan, W. E. Bigwood, John S. Gillies, T. E. Clendinnen representing the Hon. W. C. Edwards, and J. L. Martin of Kars. In addition, proxies had been received from 184 members.

President H. I. Thomas addressed the meeting as follows: "During the month of February, your president, in common with other representatives of the Canadian Manufacturers' Association, had an interview with Sir William Hearst and Mr. Lucas, the Attorney-General of Ontario, relative to the amendments which it was proposed to make to the Workmen's Compensation Act of Ontario during the session of the legislature this year. At this interview a number of more or less important considerations were laid before the Ontario Government and special attention was paid to the desirability of allowing the Safety Associations to represent before the Workmen's Compensation Board their respective groups of employers in any matter affecting such group as a whole. This suggestion was favorably considered and it was pointed out that no amendment to the

Mr. H. I. Thomas, Ottawa, Ont.

Act was required to permit such procedure and that steps would be taken to allow same in the future. It was also pointed out by the deputation that it was desirable that, on certain general points, an appeal should lie from the Board to some judicial tribunal. No desire was expressed for litigation with regard to awards made by the Board, but only for a final and decisive ruling on general principles. No indication was given by the Ontario Government as to the possibility of granting this request. Another matter which was brought forward by the deputation was the inclusion, in some cases, of the salaries of clerical employees in the assessments made by the Board. Unfortunately, this representation did not have the desired effect, as it became evident that, under the Act, as it then stood, such inclusion was not permitted, but it was evidently felt by the Ontario Government that clerical employees should be protected and their salaries assessed, so that an amendment to this effect has now been incorporated in the Workmen's Compensation Act.

Abandon Idea of Big Reserve Fund

"Perhaps the most important fact in the year's experience of the working of the Act has been the implicit abandonment by the Board of the principle of building up a large reserve fund to take care of deferred liabilities. It was felt that the representations made by your Association and other similar bodies to the effect that these reserve funds were already large enough and that it was unfair to burden the employers, at this time, with assessments larger than were necessary to take care of the current cost of the operation of

the Act, had great weight and, as a consequence, we may look, in future, to an assessment only sufficient to pay the current cost.

"It should also be pointed out to the members of our Association that merit rating has now been established and employers, whose accident record is bad, will be penalized. This modification we have constantly asked for, and it is gratifying that our efforts in this direction have met with success."

The president also stated that the capitalized value of outstanding pensions in Class 1, as of December 31st, 1918, was \$237,273.04, and that a letter had been received from Mr. Samuel Price, chairman of the Board, dated April 10th, 1919, stating that it was the intention of the Board in the near future to have a re-valuation of outstanding pensions.

Some Data From Secretary's Report

The following extracts are taken from the secretary's report: In the fall of 1918 it was decided to have your inspector visit the lumber camps, not alone for the purpose of safety inspection work, but also to inspect camps from a hygienic and sanitary point of view to avoid as far as possible industrial diseases. We incorporated with these ideas, the further one of First Aid—having secured diagrams, books, etc., from the St. John Ambulance Association—realizing that this would be a most important addition to the inspector's safety work.

Comparing the results of 1917 and 1918 cases finally disposed of by the Workmen's Compensation Board, the figures are as follows:

	1917		1918	
Temporary Disability				
Medical aid only	63		212	
Compensation	810	873	857	1069
Permanent Disability		76		69
Deaths		26		22
		975		1160

The report by the Workmen's Compensation Board of receipts and expenditures shows a net shortage on Class 1 operations for the year of \$24,147.17, which explains why it will be necessary to increase the rate of assessment on saw mills from \$1-.50 to \$1.60 for both 1918 and provisionally for 1919. The logging or lumbering rate will remain the same \$1.20 for each of the two years.

Average of \$73 Paid per Accident

We understand that the total number of accidents in all classes for 1918 was 47,848 with paid claims amounting to \$3,514,648, or an average per accident of \$73.45.

In Class 1 the average per accident (not including the estimated amount required to complete all claims for the year 1918) is \$123.88.

This emphasizes in graphic fashion the urgent necessity which exists, not only to reduce the number but the seriousness of accidents in Class 1, apart entirely from the humanitarian standpoint. It is to be noticed that lumbering and logging accidents were responsible for nearly 44 per cent of the awards and estimated requirements to settle all 1918 claims, while the percentage of saw mill accidents is nearly 55 per cent.

With reference to the subject of Merit Rating, it is felt by the Board that its adoption will go a long way towards attaining the objects sought by this industry. The following extracts from a circular issued by the Board in November, 1918, have special application at this time.

"It may be pointed out that employers who are so careless or reckless in regard to safety conditions as to be inadequately dealt with by the merit rating provisions are still subject to application of the penalties provided for by Section 74 (4) of the Act, namely, to be specially assessed for the cost of the accidents which they produce."

With regard to the subject of Medical Aid it says:

"The cost of medical aid, like the cost of compensation, has proved to be much less than was feared or anticipated when the law was being framed. The year 1918 is the first full year of medical aid experience. The figures to date show that it has added less than 15 per cent. to what would otherwise have been the burden of the Act, the compensation awarded in Schedule 1 industries during the first ten months of 1918, amounting to \$2,104,378.77, and the medical aid

payments to \$304,683.62. While, of course, some increase of rate will be inevitable by reason of medical aid, it is hoped that the figures of 1918 when finally ascertained will show the same satisfactory results as those of previous years."

Then with reference to the average rate per \$100 of pay roll, we note the following:

"When the Act was going into effect in 1915, the average rate per \$100 of pay roll which it was estimated would be required was \$1.64, after the experience of 1915 had been ascertained, the rate were adjusted to an average of \$1.27; the average rate for 1916 as finally adjusted was \$1.09, and the average rate for 1917 was 98 cents; and the latter will, as the figures now show, be slightly further reduced. These reductions have taken place while expenditures in almost every direction were very greatly increasing."

No Abuse of Provisions of Act

"The Board also, while giving the workmen entitled to it the full measure of compensation provided for it by the Act, has been careful to use every reasonable effort to avoid imposition and unwarranted payment of claims. For assistance in this, credit is due to the co-operation of employers in making careful reports, and notifying the Board of any attempted abuse of the provisions of the Act."

The net balance to the credit of Class 1 in the Pension Fund, December 31st, 1918, was \$237,273.04.

The balance carried from 1917 was \$153,980.13.

The amount transferred in 1918 was \$94,065.75.

Interests received, \$9,542.76.

Pensions payments, \$20,315.60.

The books of the Association have been certified correct by Mr. Alex. F. Chamberlain, chartered accountant.

Inspections made in 1918:

In Class 4 to April 1st, 1918	190
In Class 1 to December 31st, 1918	506
In Camps, Nov. 18th to Dec. 31st, 1918	25
	721

Services Performed by the Association

Amongst the various services which have been rendered by this Association since its inception, may be mentioned the following:

The acknowledgement of the principle of the Current Cost Plan. That is, this Association objected to the building up of a huge reserve fund by the Board by means of capitalizing deferred payments.

We also have agitated that in connection with medical aid the doctors should be placed under the directions of the employers.

We have also urged the adoption of some sort of appeal by any group of industries from any decision of the Board, which might be regarded as unfair or unworkable.

We have urged the adoption of the Merit Rating System, which is now being done by the Board.

Another matter that we have consistently advocated is a provision whereby corporations able to give satisfactory evidence of financial stability should be allowed to stand outside the group in which they would naturally fall, and pay individually the actual amount of compensation awarded to their injured employees by the Board.

The summary of accidents forwarded by Mr. J. R. Booth of Ottawa was presented to the meeting, and it was decided to suggest in the report that all our members should send in a similar report. This report covers amount paid for accidents happening during the year ending December 31st, showing saw mill operations and bush operations separately, also accidents which happened in the previous year, compensation for which was received during the current year, then the amounts paid for doctors, hospitals, undertakers and ambulance accounts during the current year; pensions paid during the current year on accidents happening in previous years. This would give a total paid by the Workmen's Compensation Board in any one year, and then should be shown the amount of the assessment paid to the Workmen's Compensation Board during that year. Then the summary should contain the number of accidents during the calendar year, and which were reported to the Workmen's Compensation Board with detail to the number of accidents which happened in the various departments.

Officers and Directors for 1919

The following directors and officers were elected to serve for the year 1919:

Mr. H. I. Thomas, president.

Mr. W. E. Bigwood, vice-president.

Directors—Hon. W. C. Edwards, Mr. Dan McLachlin, Sir Henry K. Egan, Hon. George Gordon, Mr. John S. Gillies.

Frank Hawkins, secretary.

Fourteen Mills Wiped Out by Fire

Continued fine weather throughout New Brunswick for the greater part of the last month or two has made the outdoor world attractive, but it also has made the country dangerously dry, with the inevitable toll of forest fires as a result. Just as new fires were springing up in all directions a short time ago, a providentially heavy downpour of rain averted the danger but everything was so dry that the destruction of a big lumber mill and its supplies of lumber occurred during the rainstorm. Since then dry weather has given the fires another opportunity. The most serious was that at Kedgewick, where an entire village was wiped out, leaving many homeless people and doing damage to the extent of \$250,000.

In recent weeks no less than fourteen lumber mills have been destroyed by fire, mostly in the northern part of the province. The annual recurrence of these fires, with the great loss not only in buildings and goods, but in the standing timber swept by forest fires, shows how necessary is the policy of the provincial Department of Mines and Lands which has been devoting more time and money to safeguarding the greatest provincial asset by the development of the forest protection service.

The recent decision that the government railways should be required to observe the same safeguards against the spreading of fire that have been required of privately owned roads, was a notable victory for the province and will play an immediate part in lessening the fire risk.

General News Notes From the West

The Tanner Lumber Co., at Camrose, Alta., has been succeeded by the H. J. Wells Lumber Co.

The launching of the 1,500-ton wooden schooner Gunn at the Cholberg shipyards at Victoria, V. C., marks the practical completion of the first vessel constructed on the Pacific coast of the Dominion for Norwegian registry. Two additional ships of the same type are being built at the Cholberg yard.

It is likely that an amendment will be made to the Forestry Act which proposes to withdraw certain portions of the Porcupine Forest Reserve in Saskatchewan, which are suitable for soldier settlement. It is estimated that the portions which may be withdrawn this year will aggregate about 200,000 acres. It is now the intention to take from the reserve land that ought to remain and be used for forestry purposes but it is intended to make available all that is especially suitable for crop production.

The Hammond Cedar Mill, of Hammond, B. C., is now entirely electrically driven. The daily output is about 70M feet of bevelled siding, and 200M shingles. Messrs. Hartnell, the heads of the enterprise, report business as being exceptionally good. The mill gives employment to about 100 men. New furnaces, a new filing room and machine shop 48 by 48 have been constructed. The erection of a new burner for taking care of the refuse and reducing the fire risk is almost completed, and the company is also installing a new underwriter's fire pump of 1,000-gallon capacity. Among other new machinery set up are a Yates power-feed rip saw, a Yates fast-feed motor, a six inch planing mill, resaw and a Yates No. 10 timber sizer. There are also being installed a duplicate set of trimmers.

The H. W. Wilson Co., Ltd., has been incorporated at Edmonton, Alta.

The Robertson-Hackett Saw Mills, Ltd., of Vancouver, will shortly have added to them a modern fully electrically driven planing mill. The old mill on False Creek will be torn down as soon as the new structure is completed, and with its elimination will pass one of the old landmarks of Vancouver.

Another particularly successful launching was staged at the Foundation Yards, Victoria, B. C., recently when the good ship Ottawa was consigned to Neptune's domain in the presence of one of the largest crowds that has yet turned out for a twilight affair. The Ottawa marks the eighth ship to be launched by the Foundation Company to fly the tricolor of France, the shipbuilding corporation holding a contract for the construction of twenty wooden vessels.

Bad forest fires are raging forty to fifty miles northwest of Calgary in the Sheep Creek Valley. A forest fire is also reported in the valuable timber in the Porcupine Hills.

A recent despatch from Fernie says: After fighting for twenty-four hours forest fires which threatened to sweep the town, the inhabitants of Nataal, B. C., were removed from the town in a special train early Sunday morning, while a volunteer fire corps, under Chief MacDougall, extinguished blaze after blaze within the town itself, until the fire in the immediate vicinity had spent itself. No serious casualties were reported. Forest fires are reported from many districts near here, and some ranching property is threatened. A fire one mile east of Hosmer is confined to cut-over land, and the fire wardens have been successful so far in protecting valuable timber lands.

Something Wrong with Distribution System

It is Costing Too Much to Get Manufactured Products to Consumer, Declares Mr. Nicholson, Chairman of High Cost of Living Committee

Geo. B. Nicholson, M.P., East Algoma, Ont.

George B. Nicholson, M.P., of East Algoma, who is a member of the firm of Austin & Nicholson, Chapleau, Ont., lumbermen, pulpwood and tie dealers, delivered a stirring address at the annual banquet of the Canadian Manufacturers' Association, held recently in Toronto. Mr. Nicholson is chairman of the High Cost of Living Committee in the House of Commons. To meet the heavy financial burdens imposed upon her, Canada, the speaker said, must do as any individual would, take stock of her resources, and make up her mind how to develop them to meet the obligations. "We cannot take our place as a divided people," he said, "We must find some way to become united. At the present time we find that there is utter chaos. There seems to have grown up amongst our people

a feeling of resistance against constituted authority or restraint. There is absolutely nothing in the form of unity.

"Unless we can find a basis upon which the workingman and his employer can get together we are going to end in utter and complete chaos. The unrest is due to three prime causes. There is the natural nervousness through which the whole world is passing because of the war. There is the economic pressure, which is bearing perhaps more heavily on the workingman than any other class, and there is the irresponsible agitator. The last of these I would consider first." He agreed that the time came long ago when Canadians should have said that people who were not willing to become Canadians should not have been allowed to enter; also that those who are here and are not willing to subscribe to our institutions should not be permitted to stay here.

Consumer Pays Too Much.

Dealing with the second cause, that of economic pressure, Mr. Nicholson gave it as his opinion that the less control the Government exercises over the normal things of earth the better it would be for the country. He believed there was something wrong in the distribution system, in that it may cost too much to get things from the producer to the ultimate consumer. "I believe there are instances where it is costing too much to get the things you men produce from the producer to the consumer. The Canadian Manufacturers' Association are bearing a very large part of the odium that is cast upon people who are producing things. It should be your business to see that the channel through which your goods pass to the ultimate consumer is made as clear of obstruction as it is possible to make it, and I mean the distribution system within our own borders."

Referring to the nervousness existent at present, Mr. Nicholson said that great patience was necessary. It was manifest that conditions could not continue as at present, because it was impossible to produce anything in competition with the world and have the class war such as there is in Canada to-day.

"Canada cannot establish a different basis than other countries and compete with other countries," he declared. "Our workingmen have the right to the best standard workingmen can possibly get, but if they get on a pedestal above the other workingmen of the world then the things they are making cannot compete with the rest of the world. There must be an effort to bring about a reasonable world standard."

Rebellion Against Constituted Authority

Mr. Nicholson referred to the paralysis in Winnipeg as an illustration of what the rest of the country should steer clear of. "The Winnipeg strike is not a strike at all in the accepted sense of the term," he said. "It is rebellion against constituted authority in organized labor itself. Those who are responsible for that movement know that the only way they could accomplish the purpose they had in mind—and that was the overthrow of constituted authority—was, first of all, by overthrowing organized labor. The thing that has

saved the situation in Western Canada is that organized labor has been able to see through the whole thing. The men at the head of that Winnipeg movement were not workingmen at all, but they were grafters on the workingmen of this country and the workingmen in every other country."

However, the speaker declared, there is a place for organized labor, and many of the employers in Canada are, to a large degree, responsible for placing the club in the hands of those agitators that they have been able to use, because many employers in Canada have refused to recognize the good they are getting out of organized labor, properly constituted, and because they have refused to allow the workers to get together. Mr. Nicholson came out strongly in favor of labor having the right to organize; also in favor of collective bargaining. The Winnipeg strike struck at the foundation on which collective bargaining rests to be successful. It rests on two principles, the first being the recognition that employers may organize, and the second is the inviolability of a contract.

What Education Should Do For Masses

The Canadian Pulp & Paper Association some months ago appointed J. N. Stephenson, of Montreal, a committee of one for the purpose of considering certain aspects of educational matters in Canada. It was felt that one of the underlying causes of industrial unrest is the lack of proper appreciation on the part of the people of Canada for their rightful obligations and responsibilities in respect to social, political and industrial matters. It is believed that this is largely due to a lack of training on all ethical lines in our common schools, and that the present tendency for better facilities for technical education will fill a great want in the training of those who work in mills and factories, but this does not reach the great mass of future citizens.

It is stated by the Canadian Pulp & Paper Association that the dangers of Bolshevism, just as the dangers of Teutonism, really lie in the lack of ethical standards of the people and the failure of individuals to realize and accept their responsibilities to the community. It is only by proper training of the youth that an improvement of these conditions can be accomplished.

There has been drawn up by Mr. Stephenson, after a year of hard work and deep thought on the question, a comprehensive memorial. This memorial will be presented to the various educational authorities in Canada for the local committees. The memorial has already been approved by the Canadian Mining Institute, Canadian Fisheries' Association and the Society of Chemical Industries. It is hoped that every member of the Pulp & Paper industry will express his approval of the sentiment contained in the resolution, which will be forwarded to the Ministers of Education for the different Provinces of Canada. The memorial states that it is of vital importance, in the development of the Canadian nationality with high ideals and efficient performance, that there should be an early and thorough training for citizenship in all schools throughout the Dominion.

To be effective this training should be based upon the ordinary activities and occupations of the children and young people; and it is pointed out that the success of this method is well shown in the Boy Scout movement, and that any attempt to teach abstract principles of citizenship and moral conduct solely through text-books, notes or lectures is sure to be futile. The committee is of the opinion that compulsory education should be universal throughout Canada up to the age of fourteen years, at least, and declares that illiteracy, even in a minor degree, is a great handicap. One reason why the masses in Russia cannot be reached and rescued from the present error of their ways is that they cannot read, and it is thus impossible to influence them as an educative populace can be influenced.

The question should also be considered whether some form of continuation education should not be compulsory for a further period of two years or more. To secure the desired results it would be necessary to pay the teachers larger salaries in order to make it worth while for the best men and women to devote themselves to the profession.

The committee also endorses improvements in text-books to make them more interesting and more closely related to the natural knowledge and the ordinary activities and occupations of children and parents. This would open up the opportunity of character building and training in citizenship.

Lumberman Legislator Talks on Labor Unrest

Stirring Address Delivered in Commons by Major Power, Lumberman, Who Charges Government with Negligence on Several Problems

Major Chas. G. Power, M.C., Federal representative for Quebec South

Major Chas. G. Power, M.C., who is the Federal representative in parliament of Quebec South, and a son of Wm. Power, the veteran lumberman of Quebec, recently made an able and logical address in the House of Commons on the question of industrial unrest in Canada. He discussed the situation in a clear manner and brought out many strong points in the matter of dealing with present conditions. Major Power, who is a brother of W. Gerard Power of St. Pacome, Que., president of the Canadian Lumbermen's Association, served with the Canadian forces overseas and was seriously wounded on two occasions. He was with the 14th Batt. and was later transferred to the Cyclists Corps. In his remarks in the House, he spoke in part as follows:

We have, as one of the approximate causes of the present unrest the difficulty which the Government has found in demobilization. I do not intend to go into this question at any great length. Many theories have been advanced as to whether demobilization should proceed more rapidly or more slowly, but we have found this: The Government, despite all its agencies—its employment agencies, its land settlement scheme, its war-service gratuity scheme, and even its pension scheme—has been unable to find work for the returned soldier, and unable to provide for the dislocation of industry consequent on the armistice. The Government have been unable in any way to prevent or forestall the unrest which it was patent to any one of us would follow the conclusion of the war.

How Living Costs Have Aviated

The cost of living has been going up by leaps and bounds, and there has been no attempt to prevent or control it on the part of the Government. I do not wish to tire the House by quoting the figures of the percentage of rise for all the countries in the world, but I might mention the increase that has taken place since 1914 in the following countries: United Kingdom, 120 per cent; France, 137 per cent; Sweden, 220 per cent; Canada, 84 per cent; United States, 75 per cent; One hon. gentleman stated today that in New Zealand the cost of living had gone up higher than my figures show, but if my figures are correct, and I have reason for thinking so, the cost of living in New Zealand in October, 1918, had increased only 42 per cent. So it will be seen that the increase in the cost of living in Canada has been exceeded only in European countries subject to blockade conditions. Compared with all other countries except these the increase in the cost of living in Canada is by far the highest.

It has increased considerably more than in the United States. There is twice the increase suffered by New Zealand and nearly two and a half times that in Australia.

For four years our Government has permitted and even fostered one of the most nefarious following to become organized into a band of middlemen, which is as great a curse upon the country as the cold storage octopus. It has an army of agents running wild through the country buying up everything in and out of sight upon the farms, giving the farmers such fabulous prices that it not only unsettles and sometimes prevents them from taking advantage of the normal prices, but they themselves are admitting that the product is not worth the price that they are being sold for in the city of Quebec.

The excuse is that there is a shortage of food in Europe. If there is a shortage of food in Europe, where there is revolution and strife, is that any reason why we should export more of our surplus and create the same labor unrest at home? Would it not be better to take the bull by the horns and bring down the high cost of living by spending immediately in building cold storage houses and controlling the farmer's produce, so that there may be normal prices, only charg-

sufficient commission to pay the working expenses of the cold storage plants? Then, again, can we not make a law to imprison the dishonest promoter and speculator by making it an offence punishable by imprisonment for middlemen to engage in speculation.

Wealthy People Flaunt Their Riches

There is another reason for this general unrest. I think the Government is, in some extent at least, responsible for it. The wealthy people of Canada have not been judicious in the manner in which they have enjoyed their wealth.

The wage-earner is measuring his income against the evidences of luxury, advertisements of ladies' dresses at prices that have to support a family for a year, and not too much of them at that. Gentlemen's neckties at from five to fifteen dollars, and all else in proportion—goods whose commendation evidently is their dearthness. Daily appear such appeals to fashion luxury in the newspapers as might well be called immoral in their encouragement to ungainly waste. Meantime, the wage-earner reads with rage of millions made out of war necessities, and of one claim upon the government, that he has to support, for eighteen million dollars, which a contractor would have made had his product not been rejected. He stands aghast at such figures, and, in his corporate capacity of trades unionists, he rebels against it. Here is the way the Winnipeg worker sees it: "During all these fearful years the rich became richer and the poor poorer, and with the increase of wealth the arrogance of the wealthy increased. Their wealth did not make them more beneficent. It made them mad for still more wealth. They became more and more callous."

The condition of the worker is primarily of the utmost concern to the State. He should not be allowed to be exploited by capital as a mere instrument for the making of money; hence it is unjust that the fruits of man's sweat and labor should not belong to him. As a rule it is quite legitimate for the worker and the capitalist to bargain; but there comes a time when, driven by fear, necessity or otherwise, the laborer finds it impossible to make a bargain which will give him sufficient to gain a frugal, honest and honorable living. When that time comes it is the duty of the State to see that the laborer is not oppressed by the capitalist—to enable the employee to make a fair bargain with his employer.

What Standard of Living Should Be

Further, the standard of living should not be the minimum at which the worker can keep body and soul together, there should be given to him a wage sufficient to provide him with comfort and recreation, to enable him to educate his family and to provide against accident and old age. To establish this standard, it is essential that the workers unite, for experience teaches us that man is naturally greedy, and the rich and powerful will rarely concede anything to the poor unless coercion is applied. It is the duty of the State, therefore, to foster and encourage such unions when the poor have not the same facilities for protecting themselves as the rich. It is also the duty of the State as much as possible to remove all causes of complaint between employer and employee, to prevent by remedial measures, taken beforehand, any resources to the strike, which is invariably a great economic loss, in many cases most seriously affecting those not intimately concerned in the struggle, and always leaving rancour and bitterness in its train. It is neither justice nor humanity to grind men down and stunt their minds with labor of their bodies. Daily labor must be regulated so that it is not protracted beyond the strength of the workers. In all agreements between master and workman it is implied that proper leisure be left to the workman for rest, recuperation and recreation.

The laborer must come to realize that he owes his employer and society an honest day's work in return for a fair wage, and that conditions cannot be substantially improved until he roots out the desire to get a maximum of return for a minimum of service. The capitalist must likewise get a new viewpoint. He needs to learn the long-forgotten truth that wealth is stewardship, that profit-making is not the basic justification of business enterprise, and that there are such things as fair profits, fair interest and fair prices. Above and before all, he must cultivate and strengthen within his mind the truth which many of his class have begun to grasp for the first time during the present war; namely, that the laborer is a human being, not merely an instrument of production; and that the laborer's right to a decent livelihood is the first moral charge upon industry.

Do Not Delay Building Say Many Lumbermen

The Hope That Prices of Material and Labor Will Come Down in Near Future is Illusive One—Building Operations in the East

The opinion of many retail lumber dealers and representative builders' supply men is that now is the auspicious time to build, that nothing can be gained by delay, and those who are deferring structural undertakings or postponing the erection of homes, in the hope that lumber will soon come down in price, or labor become cheaper, are being deceived. Those who have given close study to the present situation and taken into consideration all the contributing factors are firmly of the belief that all signs point to increased quotations on many lines.

Some further reports of an interesting character have come to hand with respect to building prospects in the Eastern provinces and they will be read with timely interest:

George A. Christie of Truro, N.S., reports that operations in the building line are quiet at the present time owing to the high price of material. Many are hanging back, thinking there will be a drop in quotations. Mr. Christie does not believe this is likely to occur for a year or two yet. There is some repairing going on and a few homes will be built this summer, while others are talked of. There is a great demand for dwellings to rent. In Truro rents are not only very high, but help is scarce, and on account of so many strikes all over the country building has been tied up.

D. Porter & Son, Westville, N.S., state that there are not many houses being erected in their locality, as, owing to the high cost of material, the people do not feel in a position to build and are waiting in the hope that price and labor conditions will ameliorate. The firm think that business is rather more quiet than usual on account of vessels not being available for shipping.

Many New Houses Going Up

In regard to building operations in Halifax, Wm. Watt states there are many houses going up in his section of the city, and that many more will follow. If it had not been for the outbreak of labor troubles, much greater progress would have been made. Everything was tied up for several weeks owing to the carpenters' strike. Now that a settlement has been effected, the outlook is much more promising.

A. Duchemin & Co., of Charlottetown, report they find building prospects only fair for the coming season, owing to the high prices of material. Considerable extension and repair work and jobs are being carried out, but there is not a great deal of new work. The company say that building for investment is almost unknown just at present, so they expect in the near future, as soon as conditions are more settled, to become busy.

J. L. Black & Sons, of Sackville, N.B., state that the usual amount of building and repair work is being undertaken this season. They add that a considerable increase in new structures would undoubtedly be witnessed were it not for the prevailing feeling among prospective builders that the cost of materials and labor will be lower next season. From the lumbermen's point of view the situation is good. Prices are high; the demand is active, and while there is more stock on hand than usual, it is moving satisfactorily. The firm do not look for any radical alterations in prices for some months to come.

Considerable Repairs in Progress

Geo. A. Ryan, of Grand Falls, N.B., declares that the building prospects in his section are about normal. There appears to be considerable building and repairing going on, in spite of the high cost of labor and supplies, which, he asserts, does not seem inclined to drop. Lumber is high, and the general outlook not very encouraging for a reduction in prices, owing to the lumber cut last season. Mr. Ryan says that the Burgess & Sons' lumber mills are only cutting with a day crew, against a night and day crew last year.

Musgrave & Co., Halifax, after referring to the unsettled conditions generally in the building trade in that city occasioned by the strike, report that some of the contractors paid exceptionally high figures to workmen in order to have rush jobs completed on time, but outside of those isolated cases, there had been practically nothing doing in the building line for some weeks. The devastation caused by the explosion, in 1917, has not been fully replaced, and there are still hundreds of residences and tenements to be erected. In addition to this there are several additions to banks, hospitals, shipyards, etc., for immediate construction. The firm add that the general opinion is that materials will not be lower for some time to come, but on the other hand, with the increase in wages they may be higher. In any

event, labor and building will be higher, and now that the strike is over a lot of work will be carried out. All local dealers are pretty well loaded up with ordinary stocks, but there are some enquiries coming in for large dimension material. The exporters in that community are not buying at the present time either for the West Indies or England, which makes the local market dull at this juncture.

Where Everybody is Rebuilding

J. E. Humphreys, Petitcodiac, N.B., states that a big fire in March last destroyed the greater part of the business houses in the village and that there is unusual activity there this summer. Practically everybody is rebuilding and on a better and bigger scale than before, and work has already commenced. The present cost of labor

Dodge That Storm

Lumber prices have NOT YET advanced in proportion to other commodities, but they are headed that way. The production is below normal on account of labor shortage. The demand is far in excess of the supply. Therefore, the best opinion available is that lumber prices WILL NOT COME down, but in ALL PROBABILITY will advance still farther. The sensible thing, then, for people to do who want to build, is to BUILD NOW. Come to our office and we'll talk it over.

From the "Retail Lumberman"

and materials has had no appreciable deterrent effect; although occasional comment is heard on the high prices of labor and supplies, but very little complaint. There is also more than the usual amount of repairs and extensions under way, while a great many new buildings are planned. Mr. Humphreys says that his sales this year have greatly exceeded those of last, (which was the largest in his history) and that everyone seems prosperous and optimistic. Mr. Humphreys concludes that one of the great difficulties is in getting dry lumber, or in fact green lumber, in right sizes and sufficient quantities. Stocks of last year have all been marketed and shipped, and although this season's cut is fully up to normal, much has already been shipped, and all the remainder has been practically contracted for by St. John exporters. The only difficulty has been in securing the business for transportation. The feeling seems to be that labor will continue high all the year, and that lumber quotations will prevail at an exalted level for some years to come.

The lumber industry of the Province of New Brunswick is having troubles of its own. Shortage of shipping continues to be a serious problem and one which should be coped with as soon as possible. It is estimated that 600,000,000 feet of lumber have been sold in the Eastern section of this country through the British timber controller, but the vast majority of this is still piled up about the mills and on every available lot where it is possible to place a run, waiting for bottoms. The dealers are not under any expense holding the lumber, but the quantity of it lying about is causing considerable inconvenience and blocking up space, which should be used for this season's cut. Unless some relief is offered the mills may have a hard time to keep running for they have no place to carry the lumber to as it comes from the mills. There is a report heard that there will be a lot of shipping released in July, and if this is true it will undoubtedly ease the situation.

Mr. George R. Gray Elected Director

George R. Gray, Sault Ste. Marie, Ont.

George R. Gray, manager of wood operations of the Spanish River Pulp & Paper Mills, Limited, who have plants at Sault Ste. Marie, Espanola and Sturgeon Falls, has been elected a director of the company in succession of the late Ben. Tooke of Montreal. Mr. Gray has been associated with the Spanish River Company for many years and is well known in the pulp and paper industry, enjoying the confidence of a large circle of friends. He has been a resident of the "Soo" for the past two years and was a director of the original Lake Superior Paper Company several years ago. Mr. Gray is also a director of National Grocers, Limited, and Cochrane Hardware Limited. He is thoroughly familiar with lumbering and logging conditions in Northern and North-western Ontario,

and reports that the drives of pulpwood during the past season have been brought down to the various plants of the company more expeditiously than in a long period, owing to the high water and splendid driving conditions. The company have ample pulpwood for the operation of their plants for the coming season. Mr. Gray is the nominee of the Ontario Pulp & Paper bondholders on the board of the Spanish River Company and will add strength to that representative body, of which Geo. H. Mead, of Dayton, Ohio, is president.

Gillies Bros. Lose Big Mill by Fire

The large and well equipped saw mill of Gillies Bros., Braeside, Ont., which is three miles west of Arnprior, was destroyed by fire on June 23rd. A harness-shop belonging to the firm and the C.P.R. station were also consumed by the flames. It is estimated that the loss is \$300,000, mostly covered by insurance.

Gillies Bros., Limited, are one of the oldest established lumber firms in the Ottawa Valley, having started business in 1873. David Gillies is the president of the company; J. S. Gillies, vice-president and managing-director and D. A. Gillies, secretary-treasurer. It may also be stated that J. S. Gillies is the president of the Canadian Forestry Association.

The equipment of the mill, which was destroyed, was thoroughly overhauled two years ago by S. F. Caldwell, head millwright for the firm. The plant had two single bandsaws; one pair of twin circulars, 60 in. diameter, one 24 in. gang, which runs 260 R.P.M., and two, four saw edgers. There were many labor-saving devices about the mill. For putting logs on the twin carriage the firm had steam log loaders and similar equipment for the band carriages. They also had one steam nigger with steam set works for each carriage, which they found worked out well. The band saws, while of the older type, had many improvements on them, which made them as good as some of a later date.

Hudson's Consolidated Unissued Capital

The directors of the Hudson's Consolidated, Ltd., in a circular state that they have decided to provide additional working capital to complete the financial arrangements necessary to place the newly-acquired manganese properties in Great Britain on a largely-increased profit-earning basis, in order to secure the results anticipated in the various reports received from the company's managers and consulting engineers. The company now offers for subscription 70,000 7½ per cent. cumulative and participating preference shares of £1 each at par, and 141,693 ordinary shares at £1 5s. per £1 share.

After the payment of a fixed dividend of 7½ per cent. to the preference shares, the balance of the total profits distributed in dividends in each year is applied as to 10 per cent. to the preference, and as to 90 per cent. to the ordinary shareholders.

The directors have taken the opportunity of reviewing certain other of the company's enterprises, and publish valuations and reports by the manager, Mr. H. H. Riddle, and by Mr. F. A. Salaman, the well-known timber expert, on the St. Anne timber property in Canada, situated on the St. Lawrence River.

Mr. Riddle states that the property is equipped with a circular saw-mill having a capacity of 10,000 ft. per day. The mill has been running to full capacity since November last, supplying timber to specification at less than £8 per standard, and similar timber is now

selling in England at £34 per standard upwards. He calculates that there exists over 300,000,000 ft. of good timber on the property, and that with an expenditure of from £20,000 to £30,000, the necessary dam and additional sawmill can be erected in five months. The completion of this work should easily allow of 100,000 board feet of first quality timber being cut per day, equal to 50 standards, on which there should be a profit of £15 to £25 per standard. The minimum of £15 per standard (based upon pre-war prices) would give a profit of over £112,500 per annum, working only 150 days in the year. This is considered an extremely conservative estimate.

Ontario Lumber Dealers Do Cash Business

It will be remembered that at the last annual meeting of the Ontario Retail Lumber Dealers' Association that a resolution was unanimously carried, as follows:

"Whereas the retail lumber dealer must buy his lumber in car lots, carry for a considerable period and distribute in small lots to his customers, and

Whereas the amount of capital required in the retail lumber business is now so large, and

Whereas the public is continually demanding increased service from the retail yards,

Be it resolved that the "terms of sale" in the retail lumber business in the Province of Ontario should be net cash, with ledger accounts carried only with people of absolute approved credit, and who agree to pay each month's account in net cash on or before the tenth of the following month, and Be it resolved further that a card containing this resolution in printed form be sent by the secretary to each member."

In accordance with the action then taken that a card should be issued containing the substance of the foregoing in printed form and that it should be sent out by the secretary to each member, Mr. Boulton has carried out the instructions. The card, which is neatly printed, reads as follows:—

"Terms of Sale—Net Cash. No discount. Ledger accounts only with customers of approved credit who will agree to pay each month's account in net cash on or before the tenth of the following month. Sales for amounts under \$25,000—cash with order.—The Ontario Retail Lumber Dealers' Association.

Ten Million Dollars For New Homes

Under the Ontario Government's housing scheme 300 houses are now under construction in different parts of the province, and within another month it is anticipated that another 1,100 dwellings will be erected. No fewer than 19 cities, 29 towns, 13 villages and 9 townships have come under the scheme to date.

Government officials estimate that about \$10,500,000 will be loaned to municipalities this year, of which sum the Dominion Government will furnish about \$8,500,000. Five million dollars of this money will actually be expended this year, and it is likely that next year the figure will jump to \$15,000,000.

In Toronto very little progress has been made in building homes owing to the difficulty in securing suitable sites, but had the Toronto City Council agreed to the Government supervision of its plans the local housing commission could now have been expropriating the land on which it could erect reasonably priced dwellings.

The Timber Requirements of Japan

A. E. Ryan, Canadian Government Trade Commissioner to Japan, in a recent report to the Trade and Commerce Department, Ottawa, says:

Considerable quantities of red cedar are imported into Japan. It usually comes in square cut logs ready for immediate use, without treatment except for slight planing. The squares must not be under 5-inch by 5-inch and not shorter than 10 feet. Before the armistice there was a strong demand for Douglas fir for shipbuilding. It was imported in heavy timbers of 20 feet to 40 feet long and 18 inches to 24 inches square. Most of the imports were from the Pacific Coast States of America. But there is no reason why British Columbia lumber should not fill the demand if our producers can give as attractive terms.

United States Forestry Situation

The United States has used up about half the forests originally possessed. Although there are forest associations in nearly every state supplementing the excellent work of the national forest service, trees are being used up faster than they are being grown. When a tree is cut less than half of it reaches the consumer. The saw-mill wastes amount to 40 per cent. of the tree. Forest fires cause a loss of \$25,000,000 to \$50,000,000 yearly. There are 147 national forests in the United States, consisting of 155,166,619 acres.

Woodlands Section Summer Meeting

New Regulations Favored Covering the Cutting of Timber on Crown Lands of Quebec

Reafforestation was the keynote of the summer meeting of the Woodlands section of the Canadian Pulp and Paper Association, held at Berthierville and Grand 'Mere, on June 25 and 26. The attendance was very large, many members going from Montreal, Quebec and Ottawa, and others motoring in from Three Rivers and other points.

On arrival at Berthierville the members were entertained at luncheon, and afterwards inspected the Provincial Government nurseries, under the guidance of Mr. G. C. Piche, chief forester. This was followed by a discussion, under the chairmanship of R. Kernan, president of the Section.

The chairman referred to the question of artificial and natural reafforestation, and also discussed the subject of who should pay the cost of the former—the government or the limit holders. He advocated the burning of slash, even although it would involve a certain amount of expenditure.

The Hon. Jules Allard, Minister of Lands and Forests, reviewed the work of his department in fire protection, the suppression of the fake settler, and the general conservation of forest resources. He was, he said, in favor of the co-operative method of limit holders in fire fighting. Mr. Allard also spoke of the establishment of the government nurseries, with a view to assisting the lumber and pulp companies and the private citizens.

Mr. Piche described in detail the history, operations, and extent of the nurseries, and also the reclamation of the shifting sands at Lachute. The present stock of trees in the nursery, he said, ex-

ceeded four million, and they were preparing to ship out annually two to three million plants. Mr. Piche then referred to the question of a progressive policy of reforestation in the province, in view of the rapid disappearance of trees from the shores of the St. Lawrence and also the increase in the cost of pulpwood and lumber. There was no use in hiding the truth that millions of acres of land had been impoverished either by improper cultivation or by wasteful lumbering, whilst others had been ruined by repeated fires. Mr. Piche, in enumerating the reasons for planting waste lands, declared that the increased development of the lumbering industries had produced such a big demand upon the forest that within a relatively short time some of the companies would either have to reduce their production or to purchase new holdings. The speaker was of opinion that reforestation would pay, basing his conclusion on American and European figures. As to lands leased from the Government, he had not come to a satisfactory conclusion as to who should do the work, the government or the limit holder, or both, co-operative. The forests should be protected from fire, and a systematic inventory made of the forests in order to organize a definite working plan of operation which would be based upon growth studies and also upon the analysis of the past lumbering operations. The time had come for the Government to exercise full control over the wood-working establishments of the province, as too often sawmills were located in localities where there was not enough wood to justify their appearance. All the woodworking establishments should be licensed and compelled each year to obtain a permit to operate. The Government would thus be in a position to determine if they had sufficient timber lands to justify the operation of the mills and to prevent enlargements

where there was no supply in sight. The prevention of waste in the forest and in transit to the mill should be aimed at—in fact economy all the way round. Mr. Piche concluded by advocating that those who wasted the forests by bad lumbering should replant the limits at their expense.

Mr. Ellwood Wilson urged that the Government should deal immediately with the slash question, the cost of which would, in the end, be borne by the consumer. It was impossible, he said, to secure natural afforestation unless the system of lumbering was changed, and he favored the removal of the diameter limit and the cutting of certain areas absolutely clean.

Mr. W. Gerard Power, president of the Canadian Lumbermen's Association, said that if the Government would amend their regulations as to clean cutting the disposal of slash was a comparatively easy matter.

Mr. F. W. Reed of the U. S. Forest Service, gave details of the regulations of slash burning in the States.

The members left in the evening for Grand 'Mere, and slept on board the train. Next morning, with Mr. Ellwood Wilson as guide, they visited the Lauretnde Company's nurseries at Proulx. The delegates also visited Lac a Tortue, where Lieut. S. Graham gave a demonstration in one of the hydroplanes loaned to the St. Maurice Forest Protective Association for fire protection work. The delegates were entertained at luncheon by the Laurentide Co.

The delegates passed a resolution favoring certain changes in the regulations of the lands and forests, governing the cutting of timber on crown lands as essential to the preservation and perpetuation of the forests, and suggesting the appointment of a committee of the Association to wait upon the Government urging the necessity of an early revision of these regulations to meet present-day conditions.

Votes of thanks were passed to the Quebec Government, the Hon. Jules Allard, Mr. Piche, the Laurentide Co. and Mr. Ellwood Wilson for their hospitality and efforts to entertain the members.

Hon. Jules Allard, Minister of Lands and Forests.

G. C. Piche, Chief Forester of Quebec Province.

ceeds four million, and they were preparing to ship out annually two to three million plants. Mr. Piche then referred to the question of a progressive policy of reforestation in the province, in view of the rapid disappearance of trees from the shores of the St. Lawrence and also the increase in the cost of pulpwood and lumber. There was no use in hiding the truth that millions of acres of land had been impoverished either by improper cultivation or by wasteful lumbering, whilst others had been ruined by repeated fires. Mr. Piche, in enumerating the reasons for planting waste lands, declared that the increased development of the lumbering industries had produced such a big demand upon the forest that within a relatively short time some of the companies would either have to reduce their production or to purchase new holdings. The speaker was of opinion that reforestation would pay, basing his conclusion on American and European figures. As to lands leased from the Government, he had not come to a satisfactory conclusion as to who should do the work, the government or the limit holder, or both, co-operative. The forests should be protected from fire, and a systematic inventory made of the forests in order to organize a definite working plan of operation which would be based upon growth studies and also upon the analysis of the past lumbering operations. The time had come for the Government to exercise full control over the wood-working establishments of the province, as too often sawmills were located in localities where there was not enough wood to justify their appearance. All the woodworking establishments should be licensed and compelled each year to obtain a permit to operate. The Government would thus be in a position to determine if they had sufficient timber lands to justify the operation of the mills and to prevent enlargements

Mr. Dollar Visits Eastern Ports

Robert Dollar, of the Dollar Shipping Company, owner and operator of a line of steamships which ply between Canadian and American ports, West India, and Oriental ports, was in Sydney, N.S., recently, on a business trip. Mr. Dollar said he was there to look over the situation from a shipping standpoint solely, and see what Sydney had to offer in the way of natural advantage and products of industries. The company plans to run a line of steamships, calling at Singapore and other ports in the Orient, and through the Panama Canal to some port on the Atlantic Coast. That port has not as yet been decided upon.

Lumber Company Will Not Use Aeroplanes

The Bathurst Lumber Co., Limited, of Bathurst, N.B., say that they have not made any arrangements for patrolling their forests by aeroplanes, as they do not consider this problem has been properly worked out as yet. They believe that during the experimental stage the matter will have to be handled in some way under Government patronage.

With respect to the demand for sulphite and sulphate pulp, the company declare that it is improving rapidly and prospects are that the trade will soon be back again good and strong, as at present nearly all the paper mills in Canada and United States are quite active and are in the market for raw material.

A Spoonful of Smile

A great man once remarked, "When a cheerful man comes into a room his arrival has the same effect on everyone present as the lighting of another candle around a hospitable table."

Always remember that when you are talking to a prospective customer you are like a man walking around a dynamite factory—the slightest mistake is likely to blow you out through the roof—so far as any chance of landing a sale is concerned. Your customer is a bag of sand or a load of rock. He is a man—made up of combustibles—pride, prejudices, vanity, sensitiveness, conceit. Be careful not to touch a match to any of these; avoid friction—it throws out sparks. Walk quietly—and remember a spoonful of smile is worth a gallon of growl.

Personal Paragraphs of Interest

Chas. H. Russell, of Montreal, was a recent visitor to New York on business.

Angus McLean, of the Bathurst Lumber Co., Bathurst, N.B., paid a short visit to Buffalo, recently.

Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa, visited Montreal last week on business.

W. R. Beatty, secretary-treasurer of the Colonial Lumber Company, Pembroke, spent a few days in Toronto recently on business.

L. C. Tatham of Churchill, Sims & Co., the London, Eng., wood brokers, has been on a business visit to Montreal and St. John, N.B.

Hugh A. Rose of Toronto, representing Mason, Gordon & Company, is on an extended business trip throughout the Maritime Provinces.

James W. Sewall and Joseph D. Latno, of the Sewall Co., Old Town, Maine, have returned from a short cruising trip in the Adirondacks.

W. A. Hadley of Chatham, Ont., president of the Southwestern Ontario Retail Lumber Dealers' Association, was in Toronto recently and called upon a number of members of the trade.

In the recent election in Maskinonge, Que., Rodolphe Tourville, lumberman, was successful in being returned in the Liberal interests, defeating his opponent, A. Lamy, Conservative, by over 700 majority.

Frank A. Kent, of Seaman Kent Co., Limited, Toronto, attended the twenty-second annual convention of the National Hardwood Lumber Association, which was held in Chicago on June 19 and 20.

Prof. B. E. Fernow, Dean of the Faculty of Forestry, University of Toronto, has asked to be relieved of his work, owing to poor health, and requests that his resignation take effect as soon as possible.

J. D. McCormack, General Manager of the Canadian Western Lumber Company, Fraser Mills, B.C., arrived in Toronto recently to spend a few days with L. D. Barclay, eastern representative of the firm. Mr. McCormack called upon a large number of friends while in Toronto.

In the recent Quebec Provincial election H. Biermans, general manager of the Belgo-Canadian Pulp & Paper Co., Shawinigan Falls, Que., contested the riding as an Independent candidate in St. Maurice, against Geo. Delisle, Liberal, and Dr. Dufresne, Conservative. Mr. Delisle was the successful candidate.

Claude Villiers and F. W. Wigg, of the Canadian General Lumber Co., Montreal, have been on visits to the New England States. Mr. Villiers reports that conditions have materially improved in these States, that building is proceeding very briskly, and that the outlook for Canadian lumber is decidedly better.

Miss Beatrice Maud Tobin, youngest daughter of Edmund W. Tobin, M.P., vice-president of the Brompton Pulp & Paper Company, and a well-known lumberman, was married recently to Joseph Omer Asselin, of Quebec, formerly of Sherbrooke. The ceremony was quietly celebrated at Bromptonville. Mr. Asselin and bride will reside in Quebec City.

George R. Gray, manager of wood operations of the Spanish River Pulp & Paper Mills, Limited, has been elected a director of the company in succession of the late Benjamin Tooke of Montreal. Mr. Gray has been associated with the Spanish River Company for many years and is receiving the congratulations of his many friends on his recent appointment.

George Edward Petry of Toronto, who is associated with R. G. Chesbro, representing the Allen-Stoltze Lumber Co., of Vancouver, has joined the ranks of the benedicts. Mr. Petry was married on June 24th to Miss Emeline Margaret, daughter of Rev. Dr. and Mrs. Abraham, Winchester St., Toronto. The many friends of the esteemed young couple will join in hearty felicitations.

With the recent incorporation of the Boston Plastic Fire Brick Co., Frank J. Jewell was elected President and Secretary, and Nelson Adams, vice-president and treasurer. The new corporation name is the Betson Plastic Fire Brick Co., Inc., Rome, N.Y. The company's products are Plastic Fire Brick for boiler furnace linings and baffle walls and Hi-Heat Cement for use in the boiler room.

H. R. MacMillan has been appointed representative of the British Timber Buyer in Western Canada, with offices in Vancouver, B.C. He has been on a trip to New York, Philadelphia, Montreal, and Ottawa, looking into shipping and other conditions. Prior to being appointed, Mr. MacMillan was in the aeronautical supplies (lumber) department of the Imperial Munitions Board.

Lieut.-Col. Frank J. Carew, who was the officer commanding No. 1 District, Canadian Forestry Corps, in France, and was some time ago made an officer of the Order of the British Empire, recently returned from overseas and resumed his work with the John Car-

ew Lumber Company, Lindsay, Ont., of which he is secretary-treasurer. Lieut.-Col. Carew is son of John Carew, M.L.A., of South Victoria and, previous to enlisting for service abroad, was engaged with his father in the lumber business.

Ed. Ouellette, vice-president and general manager of the Tourville Lumber Mills, Ltd., Montreal, and Louiseville, has been re-elected by acclamation for Yamaska, in the Province of Quebec elections. Rodolphe Tourville, the president of the company, had to fight for his seat in Maskinonge County. N. P. Tanguay, another lumberman, who represented Wolfe, retired after many years' service.

And. P. Shand passed away recently at Windsor, N.S. For many years Mr. Shand has been closely associated with the business life of Windsor. He was formerly connected with the Windsor Furniture Co., The Windsor Lumber Co., The Hants County Mfg. Co., Falmouth, N.S., barrel manufacturers; in addition he was a governor of the Acadia College, and President of the Commercial Bank of Windsor.

Albert E. Dymont, who was recently elected vice-president and chairman of the board of directors of the Canadian General Electric Company, to fill the vacancy caused by the death of W. D. Matthews, is a well-known figure in the financial and business world. He is senior partner of the firm of Dymont, Cassels & Company, stock-brokers, Toronto, and is identified with a number of progressive organizations. Mr. Dymont, who was born in Wentworth county, is a son of the late Nathaniel Dymont, and learned the lumber business with his father's concern, Mickle, Dymont & Son, who have several saw mills throughout Ontario, and also operate large industries in Toronto, Brantford and other cities. The headquarters of the firm are at Barrie, Ont. Albert E. Dymont holds a large interest in the organization. He is also well known to the Canadian turf, having, with his brother, established the Brookside Stable, which produced "King's Plate" winner at the Woodbine in Toronto some years ago.

Lumbermen Elected to C. M. A. Offices

At the annual meeting of the Maritime Branch of the Canadian Manufacturers' Association, which was held at Halifax recently, Angus MacLean of the Bathurst Lumber Co., Bathurst, N.B., was elected president. Mr. MacLean is a live wire in several organizations and under his direction the Maritime Branch of the Canadian Manufacturers' Association should enjoy a year of prosperity and increasing usefulness.

The British Columbia Branch of the Canadian Manufacturers' Association, at their recent annual meeting, elected J. H. McDonald, of the British Columbia Mfg. Company, New Westminster, E. W. Hamber, of the British Columbia Mills Timber and Trading Co., Vancouver, and J. O. Cameron of the Cameron Lumber Co., Limited, Victoria, members of the executive.

New Eastern Representative Appointed

A. W. Barnhill, who has been appointed Eastern representative of the "Service" Lumber Co., Vancouver, and has opened an office at 20 St. James Street, Montreal, is a well-known sawmill man and operator. He started in the lumber business with B. B. Barnhill of Two Rivers, Cumberland County, Nova Scotia, and spent fourteen years with the firm from the stump to the finished product and was also engaged in the marketing of the same. Mr. Barnhill was manager of the Ruby Lake Lumber Co., Hudson Bay Junction, Sask., for eight years, and was Forest Supervisor for the Dominion Government in that province for three years. He was president of Barnhill Bros., shipbuilders, at Goggins Mines, N.S., during the past year. The "Service" Lumber Co., which he now represents in the East, specializes in rough and dressed timber, fir, spruce and cedar, fir tank stock, B. C. red cedar shingles and all forest products from the Pacific Province.

A recent despatch from St. John, N.B., says: Capt. Dan Owen, late of the Royal Air Force, and now surveyor of the lumber lands for a United States firm, is on his way to the United States. He said he expected to command an expedition to Labrador in the interests of his firm, with the purpose of surveying the vast lumber lands owned by them in that country. Two aeroplanes will be used, one a seaplane and the other a landplane, and flying at a high altitude, photographs will be taken and maps made of the various forests.

Fire breaking out at the plant of James Davidson's Sons, Davidson, Quebec, recently, caused a loss of around \$7,500. The sawmill was not injured. Two cars of hay and some stables were burned. The loss is partly covered by insurance. On June 25th a fire swept through the Shepard and Morse yards at Ottawa and did \$17,000 damage.

And Great is the Soul of Britain!

By A. C. Manbert, Toronto

Editor, "Canada Lumberman":—

I should like to respect your request for comments upon conditions here, but I feel some restraint.

I am not unlike a motorist in a strange country, who from considerable study, has a theoretical knowledge of where the roads probably do go. There are reasonable doubts, however, until they are actually travelled.

To carry the analogy farther, the map shows some roads to be more important than others and that the more important ones control the access to lesser, but necessary paths. Shipping seems the travel artery immediately vital to the export trade and opinion is varied as to probable developments in this road. Only "after whiles" can tell.

To abandon figurative speech, I am sure lumber trade confidence and expectation are much higher than when I reached England. The relatively small, but gradually increasing stocks arriving seem "appetizers," and future commitments are now being ventured, or considered, beyond anything thought possible a month ago.

When the Timber Controller ceased purchasing and released control on March 31st, it was generally believed that his stocks would have to be pretty well placed before new and private purchasing would resume. Not so! Already private trading is competing with the Controller's stocks, and, what is more, prices are both maintained and firmer.

Fundamentally, the situation is strong. The future is becoming somewhat clearer. It is a question of time and mechanism, and none now waste breath debating the ultimately vast demands. All woods are readily placed in consumer's hands as fast as they come forward. Customers literally stand in line for white pine. So keen is the demand, the Controller publicly gives notice that parties receiving his stocks must not sell above maximum prices named by him in March last.

Commercial and social life is here so complex, one hesitates to speak with assurance, but the general business of the country is undoubtedly stabilizing itself—not so rapidly as some had hoped, to be sure.

Retail business is wonderfully good—too good for the satisfaction of the shopper, for war-time prices prevail. Few prices have lowered and many have advanced. This is unfortunate, for it adds fuel to the flame of labor's unrest, because of high living costs. How long this will continue is any man's guess.

He who knows the action of shipping and other productive agencies may answer. But it will not end immediately. It is a process and not an event, and in this clearing-house of world affairs, processes are not simple.

The marvel to me here is the wonderful patience of the

people. Restrictions, interference, discomforts. All are accepted with a good nature, a cheerfulness that quite amounts to a fine philosophy; perhaps better than any conscious philosophy, it is so spontaneous.

I have heard much of the "tension" of war times. Peace times have not removed it all. A very great deal remains. Scant housing, scant transportation, scant food, scant employment. When I hear of our disturbances at home, our grumbling, our attack of "nerves," it makes me fair ashamed at our lack of poise and perspective. Compared with this country, we have known nothing of war. "Nerves" would be justified here.

But undoubtedly it is this capacity to endure which has made Britain the outstanding bulwark in the great struggle. Also its inherent instinct toward fair play makes for it self-centered assurance, its imperturbable self-confidence. If there is unrest, there is little hysteria. If there be disagreement there is little ill-feeling. It is reflected everywhere—this respect for order and fair play; in the thronged Strand, the packed "busses," the crowded congregations—no ill-natured jostling, no recriminations.

It is not the good nature of indifference. It is the good nature of habit—a quality, not an attainment. Some prate of British stolidity. I like not the term. Stability suits me better. Temperamental? Perhaps not. But unimaginative? No. Rather an imagination that thinks in practicalities instead of abstractions, that visualizes integrity, honesty, justice.

Great is the soul of the man who is sure of himself. And great is the soul of Britain.

Small wonder, then if this great people with its heritage of centuries, goes serenely on in its national life undisturbed by doubts which paralyze.

Certain of purposes which sustain, it reaffirms, if deprecatingly, its unalterable conviction that it will "muddle through."

It is difficult for us of the Western Continent to understand all this. In our alertness, we are continually on the "qui vive." We react quickly to externals and, in the cumulative play of mass psychology, we rise to great enthusiasms or descend to marked despondencies with equal abandonment.

But without disparaging this awareness in which lies the root of our great energy, you will, I hope, understand me when I confess that in this time of stress and adjustment through which we are passing, there is a grateful sense of comfort and security in the ponderability of this great people who accept things as they are and with undisturbed self-confidence meet their problems as they come.

(Signed)

A. C. Manbert.

London, Eng., June 3, 1919.

LUMBERMEN LEGISLATORS IN QUEBEC PROVINCIAL ELECTIONS

Ed. Ouellette, M.L.A., Liberal candidate, who was returned by acclamation in Yamaska.

Rodolphe Tourville, M.L.A., who was successful in Liberal interest in Maskinonge.

N. P. Tanguay, M.L.A., late representative for Wolfe who has retired from public life.

Death of Mr. William J. Smith

Mr. William J. Smith, a well-known lumberman, passed away on June 26th at his residence, 15 Denison Ave., Weston, Ont., in his 57th year. He had been ailing since May, 1916, and heart trouble was the cause of his death.

Mr. Smith had been engaged in the wholesale lumber business in Weston for some fourteen years, and previous to that was associated with the late Robert Stewart in Guelph for some time. Prior to locating in Guelph the deceased conducted a successful contracting and carpenter business in Grand Valley for a number of years.

The late Mr. Smith was a member of the Wholesale Lumber Dealers' Association, Inc., of Toronto, and was widely known in the industry, enjoying the confidence and esteem of a large circle of friends. He was a member of the Masonic Order and also of the Canadian Order of Foresters. His wife died some two years and a half ago and a family of four sons and two daughters are left to mourn his passing. The sons are Lieut. Arthur L. (who enlisted with the 75th Batt. for overseas and was later transferred to the 4th Machine Gun Brigade, returning to Toronto recently); Alvin E., of the selling staff of Read Bros., Limited, Toronto; Arnold R., accountant in the office of his father at Weston, and Percy G. of the C. P. R. telegraph department, Vancouver; two daughters, Ila and Milda, reside at home.

The funeral took place on Saturday, June 28th, the remains being interred in Riverside Cemetery. The last sad rites were attended by a large number of lumbermen in both the wholesale and retail ranks, and many beautiful floral tributes bore silent evidence of the respect in which the late Mr. Smith was held.

Forestry Methods as Applied in Canada

At the invitation of the Pennsylvania Forestry Association, Mr. Robson Black, Secretary of the Canadian Forestry Association, addressed a large gathering of Americans on Canadian forestry problems and the methods of operation of the Canadian association. Great interest was displayed in the rapid progress of forest fire preventive work throughout the Dominion, and particularly in the success of educational work for which the Canadian Forestry Association is responsible.

Mr. Black explained to his audience that unlike ordinary propaganda, the advancement of forestry could not promise a quick, tangible profit. People accustomed to political and commercial policies, based upon immediate likelihood of gain were slow to take up cudgels for a cause that spoke of a social and national profit fifty or a hundred years hence. Yet, in a country where 90 per cent. of the forest lands were owned and governed by the people and where timber operators were merely annual tenants, any advancement of state control of forest policies depended absolutely upon arousing the masses of citizens to their public privileges and responsibilities. The Canadian problem was, therefore, in sharp contrast to that of the average American state, where only a small fraction of the forest wealth had not been alienated and placed beyond public control.

The methods employed by the Canadian Forestry Association were explained in detail by the speaker, who claimed that one of the basic reasons for success in forestry propaganda is to keep the organization free from any governmental or commercial affiliation. This allowed perfect liberty to carry on constructive agitation, which, at times, must run counter to governmental tradition, and perhaps displease certain commercial interests. Mr. Black described reforms in province after province of Canada due largely to educational campaigns.

The Forestry Association, he said, devoted the greater part of its attention to improvement of public policies and administration. At the same time, it initiated and carried out scores of educational enterprises aimed at securing the good will and co-operation of the individuals responsible for setting forest fires. Scores of thousands of school children and teachers, settlers, railroad men, and other classes were reached year by year with attractive literature, and by motion pictures and special public speakers. This was a branch of work, said Mr. Black, which plays directly into the hands of practical rangers and their scheme of patrol, for it went far deeper than mere fear of the law and gained voluntarily what under no circumstances can be compelled by magistrates and fines.

The Lessening Supply of White Pine

William Little, of Westmount, Que., writes the press as follows: In corroboration of the facts mentioned in your issue of June 2, relating to the building boom then existing in the United States, and the rapidly advancing prices of all kinds of lumber used in home building, the "Canada Lumberman," in its issue of June 1, shows that in the Ottawa lumber district of Canada a similar condition exists with regard to our old familiar friend, the white pine, known to be the most valuable in the North American forests, especially for building purposes, when its Ottawa price list shows that within the two weeks from May 15 to June 1 the mill prices for good pine sid-

ings had been advanced from a mean of \$65 per M. ft. b.m. for 1-inch lumber to \$75, and for 1¼ and 1½ from \$72.50 to \$90, and for 2-inch from \$74 to \$95 or over \$20 per M. increase within two weeks. In the lower grades dressing sidings are advanced from \$50 to \$55; dressing strips from \$45 to \$50, and dressing shorts from \$40 to \$47.

The price of mill run spruce 12 to 16 ft. has also been advanced from \$34 to \$40 per M. ft. You will also note on page 33 of the same issue of the "Canada Lumberman" some remarks contained in a letter from Mr. A. C. Manbert, of Toronto, who has been in England for some weeks conducting propaganda work in the interest of Ontario lumber products, who states: "There is literally a famine of white pine (or yellow pine, as it is called here). I went over the Surrey docks this past week and where in ordinary pre-war times vast stocks were stored there was not now five standards. In fact, I was told by a competent authority in the pine trade that he doubted if there was in all London 50 standards of pine that is for sale."

Of course, this state of the trade is largely due to the high rates of ocean freights, but it gives little comfort to those who are persistently trying to delude the public with their vagaries of unexhaustible forests, and pine timber enough to last for a hundred years, for here they get no help from the coast range of British Columbia, where there is no western pine and the mere trifle of only one half of one per cent. of white pine. Indeed, it may not be long before they will be competing with us for the limited stock now left us. The more this question of the supply of white pine is enquired into the clearer it is seen that we are close to the time when our at one time magnificent forests of white pine, the most valuable timber in existence, are destroyed through the rapacity of our too avaricious lumbermen.

Dr. Howe on N. B. Forest Survey

Dr. C. D. Howe, professor of forestry at the University of Toronto, has gone East to supervise the study of the annual growth on the Crown lands of New Brunswick. He joins the party on the forest survey which is working about thirty-five miles from Doaktown, and it is expected Dr. Howe will spend about a month in the province. He is employed by the Commission of Conservation to study annual growth in Canada, and his services have been loaned to New Brunswick in the interests of investigative work there.

The annual rate of growth will be studied so that the number of board feet of growth which takes place each year in the forests may be found out. When this is known it is proposed to regulate annual cut so as to keep it below the annual growth and thereby preserve the forests of the country. Dr. Howe was in New Brunswick last year and will continue the work which he started at that time.

Send in Your Boards for the Exhibit

The exhibition of timber grown within the British Empire, to be held in London next October, should have a special interest for Canada, which is by far the largest producer of lumber among British countries.

The collection and preparation of samples for display at this exhibition and the preparation of information to be included in the catalogue are being made by the Forest Products Laboratories of Canada at Montreal.

Each kind of wood will be represented by four boards 1 inch thick by 8 feet long and of reasonable width, two boards in clear stuff and two boards in merchantable quality. One board of each quality will be planed smooth, and in some cases polished. Some boards have already been received at the Laboratories from members of the Canadian Lumbermen's Association, but others have yet to arrive.

The collection of information for the catalogue of this exhibition is a more urgent matter, as this information must be in London next month. Besides a general description of each kind of wood, the results of tests and a list of uses, it is desired that a list of commercial sizes and qualities suitable for export of each species should be given, together with the names of ports of shipment. Such commercial information can only come from the industry itself and it would be of considerable value if all exporters would send such information as to their own products without delay to Mr. W. B. Stokes, Forest Products Laboratories of Canada, 700 University Street, Montreal.

Bill of Lading—Joint Rail and Ocean Form

After receiving an expression of views from various members throughout the country in connection with the bill of lading—joint rail and ocean form—a letter was addressed to the various railway companies asking for a re-instatement of the through rail and ocean bill of lading. After due consideration the railway companies stated that they could not make such arrangements at that time owing to the difficulties in regard to space, but that they hoped to do so by midsummer. It has just been announced by the Canadian railway companies that, effective July 1st, they will re-instate this form of bill of lading. This should be of great assistance to many interested in export trade.

Mr. Laughlin Begins Important Work

H. S. Laughlin, Chatham, N. B.

Mr. H. S. Laughlin who has entered upon his duties as chief forester for the J. B. Snowball Co., Limited, lumber manufacturers, of Chatham, N.B., is a graduate of the University of New Brunswick, taking his Science degree in Forestry in 1914. After leaving this institution of learning he went into the British Columbia forest service, where he was forest assistant until he enlisted in November, 1915. He served overseas in the 104th Batt. under Lt.-Col. (Senator) G. W. Fowler, and was eventually transferred to the Canadian Forestry Corps, in May, 1917. Mr. Laughlin served as a forester and supervisor of logging under Lt.-Col. G. M. Strong, D.S.O., in No. 5 District, C.F.C., France, from May, 1917, to Aug. 1918, when he had a general break down and was

taken to England for treatment. A few days before the signing of the armistice he was discharged from the hospital, but did not return to France. Lt.-Col. Grace of the 5th District, C.E.F., Commanding Officer, made the following mention of Mr. Laughlin in the Army Book No. 439. "This officer, Lieut. Laughlin, has been our forester and his services to No. 5 District, Canadian Forestry Corp., have been most valuable. It is regretted he leaves us owing to ill health."

In regard to his present work, Mr. Laughlin has been acquainting himself with the different regions of the J. B. Snowball Co.'s holdings. He is entering the field this month and will carry on a five per cent. cruise of about ninety square miles of the limits of the company on the Tabusintac River. Two cruising parties, each of three men, will be used for this work.

Arbitrator in Disputes is Parish Priest

The parish priest is the sole arbitrator in case of disputes between a local manufacturing company and its men, representatives of a pulp and paper corporation and its employees told the Industrial Relations Commission at a meeting recently at Grand Mere, Que. The witnesses who gave evidence were George Chahoon, Jr., President of the Laurentide Company, who testified on behalf of the company owning the mill; Joseph DesLaurier, a carpenter; F. J. Gauthier, for the employees, and Father LaFleche, who decides the disputes.

Mr. Chahoon said that the company employed 1,700 men. By a raise that was to be given in a few days the minimum salary paid would be \$3.50 a day. The men had received a fifty per cent. increase since 1914, and the increase in the cost of living in Grand Mere had not gone up so rapidly. The company itself owned seventy houses, which it rented to employees at six per cent. on the cost. Clubs for athletics and amusement were also maintained.

Father LaFleche said that every time he had asked for something from the company for the men they got it. He considered their claims very carefully and he never asked for something that he felt the men were not entitled to.

Pulp Men Go After Tonnage Facilities

If there is one organization that is alive in the industrial life of Canada and is making strong, steady strides in the way of developing export business, it is the Canada Pulp & Paper Association, who have not only appointed a representative in the person of A. L. Dawe, Montreal, to go abroad and represent them in London, acting in conjunction with the Canadian Mission, but have also taken another decisive step in the way of securing adequate ocean tonnage.

A large number of companies have several thousand tons of ground wood pulp and paper awaiting transportation and representations have been made to the Federal authorities asking them to provide the necessary tonnage on conditions and under arrangements they will permit the industry to meet foreign competition, which under the present circumstances, is practically impossible. The industry finds that its products are welcomed in Great Britain and is anxious to take advantage of the opportunity which apparently exists at this time, and establish a permanent market overseas, both for its own advantage and that of the country.

Assurances have been received from the Minister of Marine and

Fisheries that the Government is exerting every reasonable effort to the end that transportation facilities for Canadian pulp products should be provided and that vessels, now owned by the Government, are to be operated by the Canadian National Railways. It is probable that a generous amount of space in these Government owned ships will be placed at the disposal of the pulp and paper interests.

Fire Destroys Three Eastern Sawmills

The dread forest fires have again put it an appearance despite the vigilance of the rangers and within the past few days over a quarter of a million dollars damage resulted at Kedgewick, a settlement along the International Railway in Restigouche County, N. B. It is said that the fires resulted from carelessness on the part of farmers who were clearing lands and the flames got beyond their control. When the fire was noticed the villagers turned out and battled with the flames, which threatened to wipe out the entire village. Fifteen homes were demolished as well as three mills, one owned by the Richards Lumber Company, and two by the Poulay Lumber Company in addition to a large territory of lumber lands. When the flames were at their height and a call for help was being sent broadcast a providential rain checked the conflagration.

Edward Burt, a New Brunswick lumberman, received word recently that the Bridges Lumber Company's mill at Fort Steel, B. C., which he has been operating, was completely destroyed by fire. The loss is estimated at \$50,000.

Newsy Happenings from the East

The five-masted schooner Jane Palmer, arrived in New York recently, en route to St. John, where she has been chartered to load deals for England at 300 shillings per standard. This is an exceptionally high rate and should prove lucrative to the owners of the vessel, which is 2,800 tons register.

There have been several serious lumber fires in the Maritime Provinces during the past few weeks and the loss will be great.

One June 9 a serious fire broke out in the yard of the Edward Sinclair Lumber Company in Newcastle, N.B., and did damage estimated at \$50,000. The fire was so serious that a call was sent to Chatham, N.B., for assistance. Fortunately the fire was checked before it reached the large mill, which had been in operation since May 6th.

Ottawa Lumberman Takes Step Higher

D. K. Edwards, Ottawa, Ont.

D. Kemp Edwards, who has occupied the position of secretary-treasurer of Geo. M. Mason, Limited, Ottawa, for many years, has been made general manager of the company. It will be remembered that Geo. M. Mason, head of the organization, passed away recently, after a long and successful career in the lumber business. Mr. Edwards is well and favorably known to the trade in the Capital City and has always taken a warm interest in the welfare and progress of the industry. Geo. M. Mason, Limited, who are proprietors of the Bayswater planing mill, corner Wellington St. and Bayswater Ave., Ottawa, also have a branch yard at Woodroffe and deal in timber, scantling, rough and dressed lumber, lath, shingles, sash, doors and general factory work. A new board of directors was recently elected. W. T. Mason, of Montreal, is president of the company; Geo. I. Dewar, of the Montreal Lumber Company and the Export Lumber Co., Boston, vice-president and D. Kemp Edwards, secretary-treasurer and general manager. The company have developed a large and growing business and report prospects for the present season as being exceptionally good.

Receipts at the Crown Timber office, New Westminster, B. C., during May were \$24,644, or nearly double those of May, 1916, when the total was \$12,873. According to Assistant Agent Walmsley, this is due partly to the increased scale of rentals and royalties that went into effect on May 1st.

How Trees Make the City Beautiful

The Galtonian has for the past few days been looking on scenes of rare beauty about him. Spring coming with a rush has displayed Nature in her most glorious garb, says the Galt, Ont., "Reporter." Panoramic is the view from every hill in the city. Verdure is wonderfully fresh and inviting. Budding trees are everywhere. The late Hon. Jas. Young was wont to take his visitor to the west side of his house on the MacKenzie street elevation and ask him if in all his travels he had ever looked on a prettier landscape, crowned as our western hills are—terrace-like in their appearance—with hard and soft maples, oak, elm, ash, beech, cedar, spruce, pine and walnut, with a white birch here and there to add to Nature's color scheme. Other citizens champion the view from High Park as the one to feast one's eyes upon; and still others contend that from a point on Rose street near the C.P.R. station the eye receives a very vivid impression of Picturesque and Industrial Galt, an impression ineffaceable in its effect upon the sightseer. The fact is that from every hill overlooking the valley that is bisected by the Grand river this jewel spot of the valley glistens in spring and summer, with a riot of color in the fall that requires the artistic temperament and mental equipment of the painter to fashion a description. Today we are looking out on a picture that embraces many shades of green—from the dark hues of the pine and spruce to the lighter ones of the maple, elm, oak and ash. In her possession of pine groves and clumps of cedar and spruce this city is conspicuous in older Canada. Of them the hills and every piece of undulating land show natural groupings. When blended with Nature's handiwork in the valley and man's contribution to the picture in the form of stone, stucco, brick and frame structures they create a series of panoramic views of which Galtonians are justly proud.

Private Side Track Agreement

It is announced by the National Wholesale Lumber Dealer's Association, New York, that they have been doing a considerable amount of preliminary work with the United States Railroad Administration, and with various railroads, in an effort to secure a uniform and modified private side track agreement.

The following is a modified li-

ability clause suggested by the National Wholesale Lumber Dealers' Association for incorporation in a uniform private track agreement:—

It is understood that the movement of the railroad's locomotives over said track involves some risk of fire, and as between the parties, the industry assumes all responsibility for loss or damage arising from fire caused by locomotives on said track; except to the premises of the railroad and to rolling stock belonging to the railroad, or to others.

As to loss arising from any other cause each party shall indemnify the other for, and save the other harmless from, all loss of life and injury to property and persons arising out of the use of, or occasioned by, the construction or maintenance of said track as follows:

The railroad assumes all responsibility for loss of or damage to rolling stock belonging to the railroad, or to others; and for injury to or death of agents or employees of the railroad, when acting as such; except such loss, damage, injury or death as may be caused by the sole negligence of the industry, or the agents, or employees of the industry, when acting as such.

The industry assumes all responsibility for loss of or damage to all other property; and for injury to or death of its agents or employees, when acting as such; except such loss, damage, injury or death as may be caused by the sole negligence of the railroad, or the agents or employees of the railroad, when acting as such; the intent of this agreement being that in the case of joint negligence, each party shall bear its own loss, except in case of fire, and then only as set forth above; and in case of loss or damage to property of third parties (other than rolling stock) or injury or death of licensees caused by joint negligence of the industry and the railroad, the industry and the railroad shall share responsibility for such loss, damage, injury or death equally.

BELTING FOR SALE

Review of Current Trade Conditions

Ontario and the East

There have been no material changes in the general market situation during the past few days. Business, on a whole, continues good in spite of industrial interruptions at various centres. While housing propositions have been called off in a number of places there is a great deal more building developing than was anticipated a few weeks ago. The conviction is now firmly settled in the mind of many contractors and would-be house owners that nothing is to be gained by delay in undertaking the erection of new dwellings. Prices are growing firmer all the time and there is an inordinate demand for hemlock, dry stock being very scarce.

Retail lumber yards declare that business on the whole is good and reassuring reports reach wholesalers from various parts of the country. Manufacturing conditions of the mills are exceptionally favorable, and so far as can be learned, there have been no labor troubles. Driving and towing operations have been auspicious, and it looks as if last winter's cut of logs will be completed at a comparatively early period in the fall. There is a good demand for hardwood and the advanced prices are now being accepted as a matter of course. Automobile concerns are buying freely, while furniture factories are exceptionally busy, some of them being far behind in getting out their orders. For interior trim chestnut is being used to a large extent and is decidedly popular with house-builders at present.

There is a general movement of stock to the other side of the line and some improvement in the general export situation. There have been a number of sales of the season's cut at about the same figure as last year and, in certain instances, higher. Everything points to stiffer figures in order to keep pace with the increased cost of production.

The eastern representatives of coast mills have not been able to sell lately for several reasons, among them the labor tie-up in the West, the abnormal demand from the prairies, the recent rise in prices, (which will have to adjust themselves to new conditions in the east), and precariousness in the shipping situation in the prairie provinces, occasioned by the troubles in Winnipeg, Calgary, Vancouver and other cities. While orders for shiplap, boards, "V" jointing, flooring and ceiling are not being filled at present, due to the foregoing causes, there is a very good demand for timbers. It is hoped, however, that the mills will shortly be operating again in the west, and that eastern representatives will be permitted to resume business. Shingles are still high and scarce and many orders are unfilled. There is a shortage of No. 1 and No. 2 white pine lath, and building trades are using up supplies as fast as they can be secured. Dry lumber is getting scarcer every day, and until the season's present cut is released, there is likely to be witnessed the spectacle of smaller stocks. For thick ash and elm there is a good demand and agricultural implement firms have been buying quite freely, while smaller stocks of drywood have induced them to go into the market to secure timber for seasoning.

It is announced in retail lumber circles that lumber will go from two to three dollars per thousand feet higher at the first of the month, and that one of the causes is the recent advance made by mills, and the fact that there is a lively requisition at the present time, particularly in Toronto, for all kinds of material. The steady advances in shingles and the scarcity of lath also add to the tenseness of the existing situation. The opinion of those who have given close study to conditions, causes and effects, is that the man who builds now is "wise in his day and generation." Everything betokens stiffer quotations, and that there will ever be a return to pre-war prices is largely a matter of conjecture. There is one safe prediction, however, and that is prices are certainly going higher before they take a drop.

Writing the "Canada Lumberman" an Ontario manufacturer states that business is very brisk just now and all stocks, especially shingles, are in great demand. General conditions on the drives, towing and saw-milling are good, and nearly all the lumbermen have completed their drives. The water has been high in most cases and the weather favorable. As a result, the timber has been landing at the mill considerably earlier than in any corresponding period for some years past.

It is announced that more space is now available for the shipment of pulp and paper to Great Britain and other European countries, and that two or three steamships have already been placed at the disposal of the manufacturers. This is encouraging for the trade in general, as the absence of tonnage up to the present time has ser-

iously interfered with heavy export business. Indications are that from this out the situation will gradually improve. While ocean tonnage rates are no lower, the tendency is in the desired direction, so that a hopeful feeling now prevails regarding the overseas business.

Within the past two or three days eastern representatives of Coast mills have received advices of another advance of \$2.00 per thousand on fir boards of all kinds, and \$3.00 on cedar products. This makes several increases during the past few weeks, and it is not known whether or not the top has yet been reached. The latest messages from Vancouver would indicate that the strikes will soon be settled and the saw mills, along with other industries, resume operations.

United States

Activity characterizes the general situation in the lumber market and continued expansion is evidenced on all sides. The volume of current transactions is large. The building boom keeps up in a great many cities in spite of the labor unrest and strikes of certain trades. Building permits issued for May were more than double of those taken out during the corresponding month of a year ago. General reports from various agricultural centres indicate that the crop outlook is promising, and should no set back be received the harvest will be a very large one. Prices have advanced on a number of the better grades of hardwood and most of the yards in the border cities are doing a satisfactory business, with dry stocks especially in good demand. The requisition for hardwood lumber of all species is brisk and weather conditions have been favorable to increased output. There is a marked activity in birch, which is being largely used for interior trim. Gum oak, poplar and birch of the better grades are moving most freely. There is really no fixed price governing at the present time, as quotations change from day to day. The figure which one has to pay depends upon how anxious he is to secure the stock. In southern pine there is still a shortage owing to the excessive demand. There is a call for the better grades of flooring, siding and finish and prices are governed by the promptness of the shipments. One outstanding feature is the increased demand for dimension and timbers for the east.

There is no material change in the shingle situation. The demand for white cedar shingles continues good and prices have not been lowered or advanced on the whole. In the southeast the demand for pine shingles is better and all along the southern coast, where cypress shingles are manufactured, it is impossible fully to supply the demand. Stocks of 4-foot plastering lath are scarce in manufacturers' hands in all sections and buyers are having trouble in securing all that they need. Lath prices have advanced considerably lately, and evidently lath are going to be mighty good property before long. It is significant to note that the wood lath or rather, a strip of wood similar to a lath, is preferred by many concerns putting up stucco houses. A house can be put up more cheaply with the use of wood than with metal lath and, furthermore, the wood lath is not subject to the attack of acids that are now put in some of the stuccos that give the best results. This means, of course, that strips of wood similar to lath, and also Byrkit lath are sure to be in great demand.

Speaking of the general situation, one authority says: "The new discount sheet on Douglas fir, showing advances of approximately \$3 on the general list, is more effective in the eastern distributing centres than in the west or at manufacturing points, indicating that while much of the demand in the latter section has been accounted for, it is just beginning to manifest itself in the former. Another evidence that the demand which the territory west of the Mississippi has been experiencing since early spring is extending to the New England states is found in the action of eastern spruce and hemlock manufacturers in marking up prices generally, some mills withdrawing from the market until higher values are definitely established. Southern pine and hardwoods continue in an impregnable position, demand greatly exceeding supply and output and prices showing firmness. Stocks are short everywhere and buyers are not haggling over prices."

In regard to northern hemlock there is an exceptionally alert demand for all grades, which comes from the consuming industrial, and dealers in many sections of the country. Prices are strong and advancing. Northern pine, tamarac and all the white cedar products are having an exceptionally good call with no surplus of dry stocks at the mills. The eastern trade is drawing heavily on the present available supply of northern softwoods, water shipments at this time

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

being heavy to many of the port distributing points. Northern manufacturers to-day can see no weakness in any of the markets for such available items now in pile at the mills.

Great Britain

The general phases of merchandising in lumber in the British Isles are admirably summed up in the article by A. C. Manbert of Toronto, lumber commissioner for Ontario. This timely contribution appears in another page of the "Canada Lumberman," and will be read with interest. On the whole, Mr. Manbert takes an encouraging view of the situation and gives a keen analysis of the contending forces that are now at play. Reports from Manchester and other centres indicate no material change in the timber trade, and a correspondent from that city writing "Timber" says:

At the present moment forward buying is very unsettled, and importers and merchants are not willing purchasers on the shippers' present f.o.b. prices from Sweden, which are about 20s. to 30s. per standard higher than the prices paid by the Government buyer.

Finnish shippers, through their agents, have been offering some decent specifications, including a big percentage of 3 x 9 in., at reasonable f.o.b. prices, but the great difficulty in securing suitable tonnage for some considerable time has caused the importers to decline business for the present.

The freight market continues very firm, with a marked tendency to go higher. Tonnage is very difficult to secure, and holders of stocks in Sweden and Norway are very anxious to arrange shipments, and are practically willing to pay the rates quoted for early delivery.

* The Government purchases of spruce and pine from Canada are now getting shipped, and in the near future big shipments will be arriving. Pine stocks are very depleted, and what shipments that have arrived have been very meagre. There is bound to be a big demand for pine deals, boards and sidings for joinery work, and the Manchester merchants are hoping that some good-sized parcels will be arriving at an early date, so that they will be prepared to meet the requirements of the housing scheme, which will be started shortly.

Most of the large contractors have plenty of contract work on

hand, and several large jobs are expected to be given out any day now. The amount of repair work which was left over on account of the war has found plenty of work for the jobbing joiners, and large quantities of timber are getting consumed. Several buildings in the city of Manchester, which were partly erected previous to the war, are now getting completed. Joiners, bricksetters and plumbers are still scarce, and work is consequently only going slowly.

We have had glorious weather this last month, which has considerably assisted all outside work.

In the hardwood section of the trade business still continues very good, and most of the parcels arriving belonging to the Government are selling freely at prices ruling for current importation. There is a big demand for No. 1 common oak. Whitewood and gum lumber are in good request, especially in sizes under 1 in. thick. Freight rates are very firm, and shipping space very difficult to secure. The rate of freight ruling to-day is 2 dols. per 100 lbs.

The advices from the Government buyer of many charters for Swedish goods has put new life into the market. Merchants are still only inclined to deal with goods which are either in stock, on passage, or being loaded, and unless an importer can offer on c.o.f. terms with a named steamer, he finds but a small inquiry. We have several times connected on what has hitherto proved to be an ultra-cautious policy on the part of inland firms. Prices, instead of weakening with the larger import of timber, are as firm as and, indeed, firmer than ever, and there is yet no sign whatever of a fall either in f.o.b. prices or in spot values in this country. The longer the merchants have waited the higher the prices they have paid, but most of them have preferred to do this rather than take the risk of the market, even for a few months ahead.

A recent edition of the London Times says: The Government stocks of timber now are about 140,000 standards. About 117,000 standards have been bought in the Baltic and White Sea regions, and will be delivered by June and July. Another 200,000 standards of European timber have been bought and will be delivered later in the year. A further 250,000 standards of Canadian timber have been bought, and a number of ships have been allocated for its shipment. The total stock lying in the Baltic ports is 1,400,000 standards,

SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD

Montreal Reports Show Trade Improvement

Business in Montreal has picked up. This is especially true in connection with American orders. Building in the Eastern States is active, according to representatives of Canadian lumber firms visiting that territory, and the demand is improving right along the line. Quite a change has come over this section of the market, the people in the Eastern States having apparently come to the conclusion that it is futile to wait for lower prices of building material.

Locally, there is a little more doing, but the position is still far from satisfactory. There is a large amount of industrial unrest, and at one time it looked as if the entire building trades would come out on a sympathetic strike with the electricians, who have quit on account of being unable to obtain an advance of 50 per cent. All this makes for hesitancy in construction.

Prices are very firm. Then general view is that quotations will still further rise. Manufacturers are stated to be holding out very persistently for their prices. Lath, which for such a long time was almost a drug on the market, is exceptionally strong, with a good demand.

B. C. stock is, speaking generally, difficult to obtain, owing to the closing of many mills and, in some instances, manufacturers have withdrawn from the market.

Woodworking plants are fairly busy, outside orders helping to keep the factories going. The millwork employees have secured an advance in wages.

Exports on Government account are being shipped at a good rate. In addition to the shipments on the ordinary liners, a tramp has left the port with a large cargo of pine. There is a very insistent demand for pine on the other side, comparatively little going from Montreal last season. A small amount of lumber for commercial account is also being sent this season, the high freight rates being a deterrent factor in limiting this class of exports.

The pulpwood, pulp and paper exports for March continue to show gains—the figures for the fiscal year are dealt with in another column. Pulpwood in March increased from \$560,520 to \$1,408,143, and chemical pulp from \$1,190,082 to \$2,041,884. Mechanical pulp, however, was again lower, being \$226,554, as against \$606,685 in the corresponding month last year.

All Lumber Prices are Stiffening at St. John

The last two weeks has seen a further stiffening in prices of all sawn lumber at St. John. The United States buyers have awakened to the fact that there is not nearly so much lumber for sale as they anticipated and that the English market had bought about everything in sight at good prices; also that if steamers could be chartered to carry lumber, very little would be left in Canada which could not be sold at good prices, much over the present offers of the United States buyers.

All the mills are running full time at St. John and labor troubles are insignificant, there being plenty of men at the high wages being paid. Some increase in movement of stock has taken place during the last few days but it only seems temporary. As no information is given out by the shipping board all the producers of deals are in the dark and all they can do is patiently await boats. Laths and spruce boards which have been slow sellers, are now being purchased at much higher prices than offered any time to date and should the increase of building permits in United States keep pace with the last month, a further advance in price is not unlikely.

Cedar shingles are very firm and scarce. The box trade is also reported good, with prices keeping pace with advances in rough timber. Refuse lumber is still unsteady. Stocks of white pine are low and no abnormal quantity will be offered this year, in fact, it will no doubt be less than usual.

All the logs have about reached the Fredericton boom limit as the last drive of the season has left Grand Falls on the Main St. John and it should be only a short time reaching boom limits as the bulk of the logs are now into safe keeping; men are also plentiful for rafting.

Ottawa is Pleased With Bright Prospects

The greatest improvement for many months to occur in the Ottawa lumber market took place during the month of June. The whole tone of the market increased in firmness. Prices in the better grades advanced and there was a general optimistic feeling that, after months of patient waiting by the lumbermen, that war conditions were be-

JOHNSON'S Veterinary Remedies

are the surest, the most economical and the best medicines with which to equip your stables They have been on the market for twenty-five years and still retain their superiority over all others.

The quality never varies, it is our first consideration.

Prices in effect at the present time are as follows:

Johnson's Horse Liniment No. 1	Per Gal.	\$7.00
Johnson's Horse Liniment No. 1	Quarts, Per Doz.	19.00
Johnson's Horse Liniment No. 1	Pints, Per Doz.	10.00
Johnson's Horse Colic Remedy	Per Gal.	10.00
Johnson's Horse Colic Remedy	Quarts (8 Doses each) Doz.	30.00
Johnson's Horse Colic Remedy	Pints (4 Doses each) Doz.	15.00
Johnson's Veterinary Healing Ointment (Gall Cure)		
2 lb Tins	each 2.25 Doz.	24.00
1/4 lb. Tins	Per Doz.	4.00
Johnson's Concentrated Condition Powders, 1 lb. Pkgs.	Doz.	6.00
Johnson's Condition Powder, No. 2	doz.	2.75
Johnson's Horse Worm Powders	Pkgs., Per Doz.	4.00
Johnson's Purging Balls	Per Doz.	2.50
Johnson's Antiseptic Dusting Powder		
(For Drying and Healing Sores, Proud Flesh, etc.)	Per Doz.	8.00
"Kreoline," antiseptic, deodorizing	Gal. Tin	1.50

Our Family and Van Remedies are as follows:—

Pine and Tar Cough Syrup	Big 4 Liniment—Mosquito Oil
Purgative Pills	X Ray Liniment
Little Liver Pills	Cholerine Mixture (Diarrhoea)
Porous Plasters	Headache Powders
Stomach Bitters	Sarsaparilla
Laxative Cold Tablets	All Healing White Ointment

All Drugs and Patent Medicines at Market Prices.
Mail orders solicited — Prompt shipments made.

A. H. JOHNSON WHOLESALE DRUGGIST
Collingwood, Ontario

ginning to right themselves, and tend somewhat toward normal business as it was carried on in pre-war years.

The greatest improvement in the market began to be felt during the closing period of June, when it was reported that the wholesalers had or were beginning to be convinced that the price of this year's saw cut was not going to go down, and accordingly began to buy at higher prices.

Most importance was attached to the generally improved "tone" of the market. This was not confined to manufacturers' reports alone, but from some wholesalers as well, with a retailer here and there stating that business was "improving."

Little or no doubt existed that the demand for lumber was going to come back strong, and even with business being lower so far this year than had been expected, there was a strong undercurrent of feeling that business was on the up grade.

Not only were there sales of this year's saw cut at higher prices, but the demand showed more activity especially in the direction of the United States. Export business otherwise also brightened, though it did not open up to its pre-war extent. Considerable stocks of red and white pine deals and some spruce were shipped to Europe during the month of June, on what is known as "Government account."

Though the movement of stock for export went forward much faster when it was on "government account," the lumbermen, who have ideas as to the re-opening of the export trade, were a long way from being downhearted. They would have liked to have seen their own orders going over as fast.

They pointed out or seemed to take satisfaction in the belief that the faster the stock on "government account" was moved the sooner it would get over "there," and when such transporting was done that it would mean the freeing of more cargo space later on which some of them hope to be able to take advantage of at lower rates than those at present existing.

Some of the manufacturers and dealers were of the opinion that stocks in the Ottawa district at the present time are not as heavy or complete as they should be in view of the probability of a sudden opening up of export trade.

The "Canada Lumberman" can say that the saw cut of the Ottawa Valley mills this season will be less than last. The general cause given for this was that the sawmills generally did not open as early as usual. The real reason is that logs are not as plentiful as in former years.

"The effect of not being able to secure labor to send into the woods and get out the logs, last year and the year before, is beginning to make itself felt. There is plenty of water to float the logs, the thing is the logs are not in the river for us," was the general comment of a leading lumberman. Consequently without having logs at hand to saw, the sawmills have had to reduce or confine their operations. During the closing period of June, John R. Booth was only operating his mill on the usual day shift system which has been in vogue at his plant for the last two years. His sawmill is not operating to capacity.

Increased orders and inquiries from the United States indicated that the demand was for mill run, board, and better.

In connection with the increased demand from the United States exporters pointed out that in the U. S. building could be carried on the whole year round and that the wholesale dealers and yards realized this, whether there was snow on the ground in Canada or not, and consequently began to stock up.

Local transportation remained good. Lath and shingle held their previous prices and in this regard reports indicated continued firmness, or perhaps higher prices. There were no "over" stocks of either lath or shingle on the Ottawa market.

One of the most interesting inside reports was that the British Government order, purchased through Sir James Bell, the British Timber Controller, had in the Ottawa valley considerably exceeded early estimates. It was rumored unofficially that the pine output of Booth, Hawkesbury and some other Ottawa Valley mill had been entirely sold.

The furniture trade was exceptionally strong and factories were kept busy. General quotations were about twenty per cent. in advance of a year ago. Stocks for furniture manufacture remained satisfactory. The increase in manufacturing cost was attributed largely to higher wages of labor, which, it was stated, ran this item up from twenty-five to thirty per cent.

Building activity in Ottawa during the latter part of June showed little or no change.

Importation of Deals Still Light

An interesting circular was issued recently by Alfred Dobell & Company, of Liverpool, Eng., giving a report on the timber market. The firm declare that the market is still in a position of uncertainty. Notwithstanding the termination of the government control of the timber trade, the trade is still being dominated to a considerable

extent by the operations of the Timber Supply Dept. In connection with the some of its foreign purchases the Department is absorbing most of the tonnage that would otherwise be available for shippers' operations. It is not yet definitely known what course will be adopted and what level of prices will be established in the disposal of the supplies to come forward on Government account.

Dealing specifically with the various kinds of wood, the firm furnish the following timely information:

Nova Scotia and New Brunswick Spruce Deals, etc.—The stocks are very light, and bare of several imported sizes. The importations have been light, and chiefly for account of the Timber Controller. Operations for Shippers' account have been very restricted in consequence of the difficulty in securing tonnage. Hardwood planks have been arriving freely for some time, and they have been needed, but buyers relying upon a steady supply being continued are likely to be disappointed.

Douglas Fir.—The stock of planks and decking is light, and that of logs practically exhausted. The importation has been almost entirely for Government account. There is a good enquiry for logs, decking, and planks of good dimensions in No. 2 common and better.

Scandinavian Deals, Boards, etc. are lightly stocked. Deals have arrived very sparingly and have gone direct into consumption. Flooring boards have arrived freely, and have met with a good demand. Shippers are quoting higher prices for forward-delivery in consequence of the increasing difficulty of the position of freights, etc.

Pitch Pine.—The stocks in the country are very limited, and the import is restricted in consequence of the lack of tonnage, a position which it is feared will continue for some time. There is a good demand, the descriptions more particularly required being, sawn timber, half timbers (6 by 12), deals and prime lumber.

States Hardwoods, etc., have arrived freely during the past month, and have consisted chiefly of oak, walnut, whitewood, red and sap gum, and cypress lumber. No Government hardwood auction sales have been held since the 13th March, but substantial quantities have been sold privately. The general enquiry is good, particularly for prime and No. 1 common grading West Virginia white oak, 1 in. and 2 in. thick, and planed and unplaned lumber of all descriptions in thickness of $\frac{7}{8}$ in. and under. Freight continues to be a difficult problem, but buyers are disposed to meet the advanced rates of freight which are demanded.

Bright Prospects For Lumber Abroad

R. W. McLellan, Fredericton, N. B.

"I have the greatest faith in what the next five or ten years has in store for New Brunswick's forest products," declared R. W. McLellan, of Fredericton, N. B., secretary of the New Brunswick Lumbermen's Association, who has just returned from a business trip to Great Britain and Ireland.

Mr. McLellan declared there was nothing more needed or wanted in the United Kingdom and throughout the devastated regions of Europe than lumber. "But," he declared, "the ships which will carry New Brunswick's lumber overseas are yet to be built." In spite of the lack of bottoms, Mr. McLellan sees a bright immediate future for the lumber trade with the British market and believes the British buyers will allow their stock to become seasoned here before shipment instead of holding it over for a year or more when it reaches an overseas port.

Regarding the overseas lumber market condition, Mr. McLellan said:

Lumber is a staple article greatly needed in Great Britain. During the war very little, if any, new building, except for military purposes, was carried on. The result is that housing conditions in all the large centres are in bad shape. It is impossible to secure the necessary accommodation to supply this demand. Relief will only come when the necessary ships are provided to carry Canadian lumber to the English market, and many of these have yet to be built. The large shipbuilding firm of Harland & Wolf, in Belfast, are desirous to add thousands of employees to their staff, but are prevented from doing so as no tenements are obtainable. The necessary demand for our forest products will be enormous when shipping facilities improve, and the outlook in the lumber situation is bound to be good for years to come.

Uniform Hardwood Inspection Rules

Report of Rules Committee to National Association says that Differences Between It and American Association are Trivial

In its report to the twenty-second annual convention of the National Hardwood Lumber Association in Chicago on June 19 and 20, the inspection rules committee expressed the hope and the belief that the day of single standard is almost here. Referring to the old controversy between the former Hardwood Manufacturers' Association and the National on the subject of uniform inspection, the absorption of the former by the American Hardwood Manufacturers' Association and the action of the latter in adopting its own set of inspection rules, the committee report declared that "in compiling their new rules, the American Association gave evidence of the very large duplication of membership between that organization and our own by paying us the compliment of adopting our rules practically in toto.

The main point which should be emphasized and which marks a long step forward toward a single standard of inspection is the fact that the new rules follow our principles of inspection and abandon the old idea of the Hardwood Manufacturers' Association, which was the bone of contention in the hardwood for so many years." Among other things, the report of the inspection rules committee said:

Rules Not Infallible

However fair and equitable a set of inspection rules may be, they have not, in themselves, the power to prevent errors in shipping or sharp practices among either buyers or shippers of hardwoods. There must be an inspection department composed of honest, experienced, efficient men who will apply the rules fairly and fearlessly when called open. Our inspection department is organized primarily to act as arbitrator between buyer and seller in case of dispute. The position of an arbitrator is never a pleasant one, but the continual growth of our organization and the prestige which we have acquired in the consuming trade evidence the confidence which our inspection department has established throughout the trade. That the great majority of official inspections are satisfactory is shown by the small percentage of demands for reinspection. It is perfectly natural, however, that there should be some criticism of our inspection service, but of constructive criticism there is very little. The fact that the critics are about equally divided between the buyers and sellers would seem to indicate that our inspection department is following a straight line and keeping in the middle of the road.

Scientific Inspection Rules

Much has been said regarding scientific inspection rules, the intimation being that our present standards of inspection are in some degree unscientific. Your committee pleads guilty to the charge that we are lumbermen and not scientists. The practice of counting defects in the best grades while computing the cutting value of the lower grades is a custom as old as the trade itself and is embodied in our present system of inspection. If this is unscientific, then our rules are to the same extent unscientific. Whenever changed customs of the trade require that all grades be made on basis of the cutting value of lumber, then will the demand come for a similar change in the rules. Perhaps, some day, a real scientist may devise or discover a scientific method of rule making, but we feel that before accomplishing this result, the said scientist will devote himself to growing trees more scientifically than nature has evolved. A regularity in the growing of knots and other defects would be most desirable and would greatly facilitate the solution of inspection problems, or perhaps the simplest method would be the elimination from timber growth of all defects. But this is a problem for the future and in the meantime if the science of inspection rules can be measured by the successful and practical application of rules which are satisfactory and acceptable to the trade as a whole, then our entire membership, who in the last analysis, are the actual rule makers of our organization, may lay some claim to the scientific attainment.

Single Standard of Inspection

Since our last annual meeting, a new phase has developed in the organized opposition to our system of inspection. The Hardwood Manufacturers' Association which had for years promulgated a set of inspection rules opposed to our own, discontinued its organization for reasons best known to itself, and the individual members affiliated themselves with the American Hardwood Manufacturers' Association, an organization which had previously adopted the policy of neutrality as to inspection rules and which, from its inception, had expressed the desire for a single uniform standard of inspection. At the first meeting of the combined membership, in Louisville during December, 1918, the American Association revealed the change in

the complexion of the organization with reference to inspection rules by voting to adopt and publish a new set of rules and to organize an inspection service along entirely different lines from the National. However, in compiling their new rules, the American Association gave evidence of the very large duplication of membership between that organization and our own, by paying us the compliment of adopting our rules practically in toto—with some slight changes which need not be discussed here in detail. The main point which marks a long step forward toward a single standard of inspection is the fact that the new rules follow our principles of inspection and abandon the old idea of the National Hardwood Manufacturers' Association which was the bone of contention in the hardwood trade for so many years. Although the rules adopted by the American Association are admittedly only temporary rules to be used until such time as a more scientific method of inspection may be developed by them, it is to be hoped that nothing will be done to revive the spirit of rivalry which formerly existed on the part of the H. M. A. toward the National, and there are grounds for hope that these two organizations, through the large duplication of membership, may reach a mutual understanding which will lead to uniform inspection. In fact, the rules, as they are now, are practically uniform, so that the differences are now largely in the methods of applying the rules. Perhaps these differences may be overcome in the course of time. It should be borne in mind also that the American Association has for its principal functions the advertising and market work and the compiling and dissemination of information regarding supplies of lumber and sales records. These two functions in themselves will doubtless require the greater part of the time and effort of that organization so that the question of inspection rules and service will not be emphasized in the sense of becoming an active competitor with our organization.

Laurentide Company is Extending

Extensive additions in the way of a new finishing-room, a storage and shipping building and a steel bridge are being carried out at Grand Mere, Que., by the Laurentide Co., Limited. Construction has begun on the new finishing-room and work on the other buildings will be under way in the near future. The improvements being carried out will afford the Company the most up-to-date facilities for handling their pulp and paper from the machines direct to the shipping point in their yards. The finishing-room has concrete foundations, brick facing and steel superstructure. Inside of the building there is room for the elevator shaft. This shaft is about 120 feet high. The capacity of the elevator will be about six 90-inch paper rolls or twelve 45-inch rolls. The paper will be delivered to a steel bridge connecting the elevator to the storage and shipping building. Its length is 170 feet by 31 feet wide. The last ninety feet of the bridge will contain scales for weighing the paper rolls and will provide space for wrapping them. This section is to be called the wrapping aisle. The bridge is of the lattice braced girder type and is supported on a central column of steel resting on a concrete pier.

The new storage and shipping building will be 92 feet wide by 280 feet long. Its foundation will be of concrete, the walls of solid brick and the super-structure of steel. The flooring will be of concrete on steel I-beams. The building is so designed that the maximum trucking space will be approximately sixty feet in length. An electric hoist will be installed to handle the paper rolls to the cars.

Charters Granted Housing Companies

The Listowel Housing Co., Limited, is a new organization which has been granted a provincial charter. The capital stock is forty thousand dollars, divided into eight hundred shares of fifty dollars, and the headquarters are at Listowel, Ont. The incorporators are Max K. Becker, Wm. Climie, J. H. Bender, Aaron Ringler, John M. Campbell and F. W. Hay, all of Listowel. The objects of the company are to acquire land and erect thereon dwelling houses of modern size and improvements, to be sold at moderate prices, or to be rented at moderate rates. The company will come under the purview and be subject to the provisions of the housing accommodation act.

The Canadian Co-operative Building Society, Limited have been granted a charter with headquarters in Toronto and the object of the organization is to buy, sell, transfer, hold, mortgage and possess real estate, to erect thereon buildings of every kind and to buy and sell building materials of all descriptions. The incorporators are L. H. Starrett, L. D. Corbett, Edward H. Wilson, Claude Warrington and others.

National Dealers Will Meet in Detroit

The next annual convention of the National Lumber Dealers association will be held at the Hotel Ponchartrain, Detroit, Mich., on September 11th and 12th.

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

F-4 (B. & F.)

"Reliance" Chain

With F-4 (or B. & F.) Attachments; the best thing for Saw Dust and Light Refuse Conveyers. Used also for Lumber Conveyers.

Jeffrey Square Shank Pin Construction

The hard smooth steel pins with the square shanks fit into perfectly square holes. The bearing surface is the full width of the pin. We are the originators of this type of chain and have been building and improving it for 25 years.

F-2 Attachment

Jeffrey Detachable Chain

The type most generally used for Chain Drives. With F-2 Attachments to carry flights, Detachable Chains make good saw dust Conveyers.

"Reliance" Malleable Drag Chain

FOR SAW DUST AND REFUSE CONVEYERS

JEFFREY CHAINS

For Conveyer Service in Handling Logs, Lumber, Mill Refuse, Slabs, &c.

Not just chains, but chains that combine all the qualities and features demanded where greatest production or capacity is to be obtained.

Our 36 years of Chain building experience and knowledge of the Lumber Industry's needs makes the recommendations of Jeffrey Engineers valuable to you.

EDGINGS

Ontario

The warehouse of the C. E. Gallagher Company, general storekeepers and lumber dealers, Bath, Ont., was recently burned to the ground.

Work will shortly start on the new sawmill of F. M. Wallingford, Timmins, Ont., and the mill will be rushed rapidly to completion.

R. E. Truax & Son, Walkerton, Ont., are remodelling their sawmill at a cost of several thousand dollars. Two new water wheels to develop 250 h.p. each will be installed.

On the suggestion of Controller Cameron, the Board of Control, Toronto, has decided to have a survey of the lumber yards in the city. He said that some were operating without permits.

The Ontario Department of Lands, Forests and Mines are advertising for tenders for the right to cut timber of various descriptions in the townships of Groves and St. Louis, the time for receiving such bids expiring on July 16th.

Supplementary letters patent have been granted by the Ontario Government to the Sturgeon River Improvement Company, Limited, extending the period of its existence for a further period of ten years, the extension to date from August 12th, 1919.

The Seamen, Kent Company, at Meaford, have received a large order from Liverpool, England, for hardwood flooring. They have found labor very scarce in Meaford and every effort has been made to induce help to come in from outside points.

The annual meeting of the Ottawa Lumbermen's Credit Bureau will likely be held some time next month. It will be remembered that Geo. M. Mason, president of the Bureau, passed away recently and in the meantime Grant P. Davidson, vice-president, is acting.

The Moose Lake Lumber Company, Limited, with headquarters at Cobalt, and a capital stock of forty thousand dollars, has been granted a charter to carry on the business of a lumber, saw and planing miller, etc. Among the incorporators of the company are John Ough, Alfred W. Herrington and Bruce Williams and others, of Cobalt.

The Frontier College has been incorporated with head offices in Toronto, to promote the education and welfare of Canadian frontiersmen, lumberjacks, miners and other working men. Among the incorporators are Alfred Fitzpatrick, educationalist, R. C. Dearle, lecturer, L. E. Westman, editor, and David A. Dunlop, barrister, all of Toronto, and James Playfair, of Midland, shipbuilder.

The Kingston Navigation Company, with headquarters at Kingston, and a capital stock of forty thousand dollars, has been granted a charter to operate boats and other ships or craft, and, generally, to continue a business of carrying passengers or freight by vessel or otherwise. The incorporators are John M. Campbell, John A. Carnegie, Robert E. Burns, John T. Bain and Chas. J. Bolton, all of Kingston.

It is authoritatively denied at the Toronto office of the Lake Superior Corporation that the Spanish River Pulp & Paper Company are negotiating for the large block of 682,000 acres of pulp lands owned by the Lake Superior Corporation. A report to this effect was recently published, but the statement is offered that negotiations with other interests have been in progress for some time, and are expected to come to a satisfactory conclusion before long.

Eastern Canada

The Tourville Lumber Company will erect a machine shop at Louiseville, Que.

Fire which broke out in lumber stored near the Edward Sinclair Company mill, near Newcastle, N.B., caused damage estimated to be between \$150,000 and \$200,000.

J. & W. Duncan, Limited, 1801 Ontario St. E., Montreal, are asking permission from the city council to erect a sawmill on Beaufort St., Montreal. They are also erecting a two-storey addition to their office.

The Tobique Lumber Company's mill at Eel River was totally destroyed by fire recently. The loss is about \$15,000 and is partially covered by insurance. The lumber piles were not damaged. Work of rebuilding has commenced.

Serious forest fires are reported from the lower part of Matane County, Que. A sawmill belonging to Mr. J. A. Boulay, former member of the House of Commons for Rimouski, was burned to the ground. A number of box and flat cars and huge quantities of lumber were also destroyed.

A Federal charter has been granted the Minneapolis Steamship Co., Limited, with a capital stock of \$50,000, and headquarters in Montreal. The company is empowered to build, acquire, charter, sail and operate steamships and other vessels and to carry on a business as freighters and forwarders between ports of Canada and Great Britain, or any foreign country.

A provincial charter has been granted H. C. Johnston Co., Limited, with a capital of \$20,000 and headquarters in Montreal. The company is empowered to carry on the business of contractors, engineers and builders, and, also, to deal in timber, lumber, wood and pulp; to buy, acquire and operate sawmills, planing mills, etc., and to hold and sell forest and timber lands.

La Compagnie de Pulpe du Chicoutimi have been granted supplementary letters patent to increase the preference stock of the company from the sum of \$2,500,000 to \$3,000,000. The new stock will be divided into shares of \$100 each and the common stock of the company will be decreased from the sum of \$900,000 to \$400,000.

Beauchemin & Rivet, Limitee, of Amos, Que., have been incorporated with a capital stock of \$49,000, to own and operate sawmills, shingle mills, pulp and paper plants and carry on the business of lumber merchants and manufacturers. The incorporators are Joseph A. Beauchemin, Pierre E. Beauchemin, Alexis Rivet, Dr. Jos. A. Biague, and others.

A charter has been granted Three Rivers Lumber Co., Limited, with a

capital stock of \$300,000, and headquarters in Three Rivers. The incorporators are Germain Beaulieu; Reigner Brodeur; Chas. Holdstock and others. The company is authorized to carry on the business of manufacturers of and dealers in lumber and other wood, and to own, operate and control lumber operations, stores, mills, etc.

The Harvester Navigation Co., of Sussex, N.B., with a capital stock of \$128,000, has been federally incorporated. The organization is empowered to build, lease, charter and operate ships, tugs, barges, etc. Among the incorporators of the company are M. Garfield White, lumber merchant, of Sussex, N.B.; Edgar Taylor, lumberman, of Apple River, N.S.; Whitfield Smith and Walter A. Keirstead, of Apple River, N.S., and Judson A. Cleveland, of Alma, N.B.

R. W. McLellan, of Fredericton, N. B., secretary of the New Brunswick Lumbermen's Association, who recently returned from an extended business trip to Great Britain and Ireland, states that conferences which were held in New York on his return, have convinced him that the pulp and paper business is now in that condition which means there is no prospect of advancing prices or even a return to last year's figures. The pulp and paper industry must await a return to something nearer normal conditions before its future can be accurately forecasted.

Supplementary letters patent have been granted by the Province of Quebec changing the name of the Saguenay Power Company to that of the Saguenay Pulp & Paper Company, and granting additional powers of manufacturing pulp and paper and all articles in the making of which wood, pulp and paper may be utilized; to manufacture lime, bricks and to work quarries and to lease houses for and to employees, etc. The capital stock has been increased from \$3,000,000 to \$9,500,000. The principal place of business of the Corporation will be in Montreal instead of Chicoutimi, Que.

The revenue from the Department of Lands and Forests in the Province of Quebec for the last fifty years, ending June 30th, 1919, will, according to Hon. Jules Allard, show an increase of one million dollars. This is due to the recent order-in-council increasing the stumpage and other dues. In referring to the forest fire protection policy of the government, Hon. Mr. Allard said that if the plans which the administration now had in view succeeded in regard to forest fires, it would mean that no matter what exploitation of forests there was, Quebec would have forests in perpetuity.

The wooden cargo vessel "C-16" of 1500 tons, was launched recently by Fraser, Brace & Co., from their yard in Cote St. Paul, Que., this making the sixth vessel of a series of eight, which the firm are building for the French Government. Three of them were launched in March last. The dimensions of these ships are as follows: 1,500 tons; length, 202 ft.; 40 ft. 6 ins. beam; 17 ft. moulded depth. They are equipped with twin screw engines, Scotch marine boilers; crew quarters, 24 men; equipped with six cargo winches. The eight vessels are to be delivered this summer. They are all built of British Columbia fir.

Western Canada

A charter has been granted to United Aircraft Limited, of Vancouver, with a capital stock of \$100,000.

The Arbuthnot & Helmer sash and door factory, 995 Sixth Avenue West, Vancouver, was recently destroyed by fire.

The Lanar Logging Co., Ltd., of Vancouver, capital \$25,000, and United Logging Co., Ltd., of Vancouver, capital \$10,000, have lately been incorporated.

The Abbotsford Lumber Company, of Abbotsford, have completed a record month's business, having shipped during May one hundred and twenty-eight cars of lumber containing some three million feet.

The Belgo Lumber Company, Limited, of Vancouver, with a capital stock of \$40,000, and E. C. Walsh Lumber Co., Ltd., of Vancouver, with a capital stock of \$50,000, have recently been granted provincial charters.

At a meeting of the Greater Vancouver and Lower Mainland Bureau of the Vancouver Board of Trade, the erection of a pulp mill in the Fraser Valley was proposed. It is believed that if such a mill is established, a large amount of the small standing timber could be used. The seeding down of logged-off lands in the valley was also another proposal.

The Mann & Wright lumber mill, which was recently erected on a triangular piece of land near Kennedy Station, B.C., formerly owned by the Timberland Lumber Company, is now in operation. The mill is run by electricity and ties, dimension timbers and rough and dressed lumber will be turned out. The company expect to have enough standing timber on their five hundred acre limits to keep the mill running for over three years.

A recent report from Winnipeg is to the effect that the lumber industry throughout the prairies has reached such proportions that car facilities are inadequate for getting the stock from British Columbia mills. On account of the scarcity of cars, yard labor and other trade conditions, Winnipeg wholesalers are being handicapped in securing sufficient stock. A large number of orders have been received from the country, particularly in the rural communities and small towns. There has been quite an advance in price during the last few days, owing to the augmented cost of production.

A. L. Mattes, manager of the Prince Albert Lumber Co., Ltd., Prince Albert, Saskatchewan, recently spent some time in the pine districts of Oregon and Washington studying manufacturing and logging methods. The Prince Albert Lumber Co. will cut out its timber this season and is planning on removing to some point on the Pacific Coast. Prince Albert is on the edge of the great Canadian prairie, on the line of the Canadian Northern. The timber is entirely small spruce, running about 20 logs to the thousand feet. The mill is a double cutting band with fast feed planers and other modern equipment.

The big plant of the Whalen Pulp & Paper Mills at Mill Creek has closed down because of conditions caused by the Vancouver strike. It has been found impossible to get the large product cut on account of lack of shipping facilities and thus 300 men have been thrown out of employment although it is not expected the shut down will last more than a few days. The Whalen Company found it would be impossible to keep going owing to the congested condition of their warehouses and made an arrangement with the Britannia Mining Company, whose mines are situated only a few miles from Mill Creek, to take as many of the men as desired to go. Quite a number took advantage of the offer and those who did were told that they were at liberty to remain in their houses rent free during the period of the shut down.

SYRACUSE BABBITTS

This is the first of a series of questions and answers on babbitt metal problems, which we trust will be of interest and value to every user of babbitt metals. If you have any problems of your own, take it up with us, and we will be glad to offer you our advice.

Question No. 1

How much do your bearings weigh on the average; Let us say 50 lbs. You need babbitt, you send out inquiries and place your order at the lowest price. This price may be a cent or two lower than ours. How is that babbitt going to be alloyed? A saving of 2c per lb. on your babbitt means the negligible saving of one dollar on a 50-lb. bearing, and this means that the manufacturer must cut his cost of manufacturing. How? By reducing the period of alloying from 24 hours to one or two hours, and in all probability, by using lifeless scrap instead of virile metals. Is it worth the risk for a dollar on a bearing?

SYRACUSE BABBITTS

are made of prime, virgin metals and alloyed by the Stanley Process which involves 24 hours of agitation. Absolutely homogeneous, durable and dependable.

Rabbitts, Solders, Phosphor-Tin, Phosphor-Copper, Tin, Lead, Antimony, Spelter, Aluminum, Bismuth.

Syracuse Smelting Works

Subsidiary of United American Metals Corporation

GREATER BUYING POWER

That is what the trade paper represents to the man who is a regular and careful reader of it.

In its editorial columns he finds useful ideas that help him in his business—helps and hints that smooth out many of the rough spots—plans the other fellow has tried and found successful.

The advertising pages are also a source of valuable information. Here he learns what the manufacturer has to offer—how those goods are made—the materials that enter into their manufacture—when salesmen are on the road—special opportunities, etc.

He keeps thoroughly posted on the market, because the trade paper is in close touch with the situation and gives him accurate knowledge of conditions—when and what to buy.

Read your trade paper thoroughly each issue and make a reference file of it. You will often have occasion to refer to it.

Why Dominion Friction Surface Belting Keeps Employees Satisfied

There are few manufacturers who haven't discovered that satisfied employees are an absolute necessity to low cost of production.

But poor equipment will not keep employees contented—it will not permit maximum production—it increases upkeep cost—it creates needless waste of time for operators and machines while making repairs.

Dominion Friction Surface Belting, in eliminating these conditions, does much to keep employees satisfied, for it enables operators to turn out maximum production at low cost—does away with most transmission troubles and saves power by taking a grip on pulleys that practically prevents all slipping.

Our Belting Experts are ready to show you how this "plus service" belting will keep your employees satisfied, just as they have for many other manufacturers. Phone, wire or write to our nearest service branch—there is no obligation.

Makers of

Dominion Hose, Packing and Industrial Rubber Goods and Dominion Tires, the GOOD Tires for every purpose.

Maple Leaf SAWS

Are Good Saws.

Maple Leaf Circular Saws are made of Special High Grade Steel, accurately ground; have hard-tempered center which makes a stiff blade that will stand up under the most severe conditions, and is less liable to push over in case of accident.

Let us prove it to you if you have not discovered it already.

EVERY SAW GUARANTEED.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

—IN—

**Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.**

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You *pay* for Chapman bearings
whether you *buy* them or not**

LINK-BELT FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed" we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show a few types. Our Catalog shows many others. Send for a copy.

7 Of Our Skidding and Loading Machines 7 in Use by One Ontario Lumberman

Would he keep adding to his equipment like this from year to year if he did not find it profitable to use them?

What adds to his profits would likewise add to your profits if you were to give them a trial.

We have the right size and style machine for your work, as we make them in 7 sizes, from the little 10 horsepower size that will lift a ton and a quarter, to the massive, powerful 50 horsepower machine that will lift or pull any log you want to hitch on to.

In any of these 7 sizes we offer you a choice of steam power, electric power, gasoline power, or belt drive.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

*Trussed Concrete
Steel Co. Limited
Walkerville, Ont.*

The Trussed Concrete Steel Company, Limited, of Walkerville, Ontario, is one of the foremost reinforced concrete concerns in Canada, as well as the largest Canadian manufacturers of steel sash and steel casement windows. Their opinion of Goodyear Extra Power Belting is pithily expressed in this letter from Mr. S. Farrell, purchasing agent:

"We have been users of different types of belts for quite some time, but we have no belt which will stand wear as long as the Goodyear Extra Power Belting which we purchased from you some time ago. The photograph shows your "Extra Power" belt in use on an air compressor. It has been in use on same for some time and is still as good as new, while other belts previously used lasted only two weeks. We are gradually replacing all our belts with Extra Power."

GOODYEAR
MADE IN CANADA

Power Costs Money—Conserve It

*Goodyear Extra Power Belting Costs
You Less Because of Longer Service—
and Saves Enough Power to Pay for Itself*

Industry wastes a great sum of money through inefficient transmission of power.

Belts slip—pulleys are out of alignment—bearings worn—belts too heavy or too light. And yet superintendents and managers wonder why production slows up—why costs mount.

Today thousands of Canadian industrials have reduced their power-waste measurably through the correct application by Goodyear men of Goodyear Extra Power Belts to their drives.

Goodyear Extra Power Belts have increased power transmission in many cases to a remarkable degree.

They have provided steady, uninterrupted operation of vital machinery.

They have given long, low-cost service.

Letters on our files vouch in cold figures and warm praise for the results obtained from Goodyear Extra Power Belts.

A Goodyear man will call on you at any time you say—without obligation to you. He will record the size of pulleys, horse-power transmitted, speed, length of drive, conditions of work. And when our recommendation comes to you, it will bear the stamp of engineering ability. Phone, write or wire the nearest branch.

The Goodyear Tire and Rubber Co., of Canada, Ltd.

Halifax, St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, London, Winnipeg,

EXTRA POWER BELTING

The Log Jack for Heavy Work

New Double Powered Log Jack

The accompanying illustration gives a correct idea of our new Double Power Log Jack, designed for hauling heavy timber into Saw Mills.

GEAR.—The large Gear Wheel is 36 in. in diameter, with 72 teeth, 4 in. face, and 1½ in. pitch.

PINION on intermediate Shaft has 13 teeth, 4 in. face and 1½ in. pitch.

PAPER FRICTION is 10 in. in diameter and 10 in. face. Iron Friction Pulley is 30 in. in diameter and 10 in. face.

CHAIN is made of extra heavy steel, and the bunks have steel spikes, the whole outfit being calculated for heavy logs.

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

- 1st—Pyrene is death to all inflammable fires.
- 2nd—Pyrene does not freeze at fifty degrees below zero.
- 3rd—Pyrene does not deteriorate.
- 4th—Pyrene is easily operated and ever ready.
- 5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.
- 6th—Pyrene has served with the boys at the front.
- 7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the 2½ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances; also for our book on how to protect your factory. This book contains valuable information.

GEO. W. REED & COMPANY, LTD.

Thomson Improved Spark Extinguisher

is an appliance for the tops of chimneys and stacks that is warranted to extinguish all dangerous sparks without choking the draft. Where wood is used as fuel, they are a positive necessity.

It is no untried experiment, as there are hundreds in use at the present time which are giving complete satisfaction.

Insurance companies make substantial reductions in their rates where this device is used.

Send for particulars.

Aloxite Saw Gumming Wheels

Save Time and they cut Wheel Costs

KEEPING saws in shape costs money.

Real saw gumming wheels will cut these costs to a minimum without sacrificing efficiency.

When we say *real* saw-gumming wheels we mean wheels that cut fast and cool. That cut free without any dragging action. Wheels that hold their shape and require but little dressing. These are just the sort of wheels that will reduce your saw gumming costs and increase the efficiency of your filing room.

These are just the sort of wheels you will find in

Aloxite Saw Gumming Wheels

Made in all of the standard
sizes, shapes, grits and grades

DUPLEX FOUR
WHEEL
DRIVE
TRUCK

Heavier Hauls at Lower Costs

The prevailing tendency of lumber men and other heavy-hauling experts to favor the Duplex 4-Wheel Drive, is easily explained.

After all, the superior power of the Duplex is a matter of simple mathematics.

Because Duplex power is applied to all four driving wheels, it exerts a four fold pulling capacity.

Because all of the gasoline is converted into driving power, and not wasted in spinning powerless wheels, the hauling cost is remarkably low.

Cost data of many, many firms, in more than a score of varied industries, shows that Duplex ton-miles actually average 20 to 60 per cent. less.

Duplex results are the same—on *smooth, city streets*, where hauling difficulties are nil, and on *miserable country roads*, where hauling difficulties are greatest.

These figures, plus the easily understood mathematical principle of increased power, explain why Duplex trucks are constantly replacing horses, mules, and other trucks for heavy hauling.

They prove that Duplex power *goes through*, where other power fails.

They prove that Duplex power does *more* hauling at decidedly *less* expense.

Duplex dealers are especially anxious to get in touch with firms which estimate the earnings of their hauling fleets on the basis of ton-mile savings.

They welcome eagerly a chance to prove by comparative demonstration this greater pulling power—on hauls of the most difficult nature.

We confidently urge you to study Duplex figures and to witness Duplex performance.

They will convince you that the Duplex 4-Wheel Drive has demonstrated its superiority in heavy hauling, because it works better, saves more, and lasts longer.

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Saw mill Machinery for either Band or Circular Mills.

Through the scientific investigation of our Engineering Department, all the factors which enter into the design of a belt have been standardized. According to best modern practice, belts are designed with an overload capacity of about 60%. Such ratings are found to give the lowest cost per horse-power transmitted per year.

48" Heart 3-ply Belt, 86 feet long, installed in 1911 in the mill of the C. A. Smith Lumber Company, Baypoint, Cal. Driving pulley, 14 feet. 101 R. P. M. Driven Pulley, 4 feet. Belt Speed, 4,400 F.P.M. Theoretical horse-power, 600. Actual horse-power transmitted, 850 to 900. Cost of Belt, 1/5 of 1c per horse-power per week.

"Where Little Things Are Big"

Think what this belt must do. Traveling at 4400 feet per minute, it makes its circuit fifty times every sixty seconds. For every one of these revolutions, each part of the belt must slacken and tighten itself, practically once a second.

To be efficient, it must do this without loosening its grip on the pulleys, without jumping or slipping. That this 48" Heart Belt does transmit power efficiently is evidenced by the fact that it is delivering 250 more horse-power, or over 40% in excess of that for which it had been designed. It has been doing this for over 8 years.

The test of such conditions seems impossibly severe, and yet this belt succeeds because it is made from the right material—leather—which has retained so many of the wonderful properties that fit it to be the skin of a powerful, active, living animal.

In order that our leathers may meet these almost impossibly severe requirements of elasticity and pulley grip, we tan them ourselves specifically for belting use, handling 1,000 hides a day.

That we may offer always the right belt for the required work, we make our Standard Series of Leather Belting—a Belt for each class of power transmission. Standardized in manufacture and standardized in application to the work to be done.

Many of the best belted plants ask us to specify the belting for every pulley drive. Try the plan yourself. Then, when buying, call for "Graton & Knight — Brand or equal." This won't commit you to buying our belts. It will put your buying on the one basic consideration—the work to be done.

ARE YOUR ENGINES EFFICIENT ?

OUR BALANCED VALVE STEAM ENGINE.

Simplicity of design and absence of wearing parts are the "Sterling" points of this machine, which make it a popular medium of power in saw mills, planing mills, etc. — embodied with the highest grade workmanship and manufactured from the best materials.

The above design in various models to produce from 24 to 160 horse power.

Throw Out Those Old Valves!!

Don't tolerate kicking or leaking valves on your Steam Feed. Just as sure as your valves kick, your cutting capacity is going to take a drop. The Sawyer "feels" his work through his lever. A kicking valve scares him off his work; a leaking valve won't let him do his best. Both kinds are money losers for you.

WATEROUS VERTICAL STEAM FEED VALVES

Will neither kick nor leak

In the first place, the vertical position of this new valve allows perfect drainage into the exhaust port at the bottom. Should the connection break the valve drops of its own weight and shuts off the steam. That's a **safety** feature.

Then, the exhaust—mostly water—doesn't pass through the valve plug, but through the lower part of the valve chest. That's why the valve **cannot kick**.

And—most important of all—with the vertical valve there is no weight on the valve seat and consequently **no wear** and **no leakage**. It's a **real** steam conserver.

Further, the Waterous Vertical Valve is balanced to work easy, there is no dead steam between it and the cylinder. Just as soon as the sawyer moves his lever he gets the full "punch" of the live steam on his piston. That makes a **fast, quick-acting, satisfactory feed**.

If yours isn't that kind now, attach Waterous Vertical Valves and see what a difference they will make.

CUT TO ORDER

George C. Brown & Company,
Memphis, Tenn.

May 26th, 1919.

Gentlemen:—

We just want to say to you that the two cars of No. 1 Common Gum which we have received today and are unloading, is very nice stock indeed, and if you people can ship us this kind of material from time to time, we will be very glad to send you additional orders. In the past we have at times experienced quite some difficulty and annoyance in receiving Gum which did not come up to our requirements at all. This stock which you have shipped is nice, straight, clean looking lumber and just the kind that we want to buy.

If you can give such instructions as will insure our receiving this kind of material, we will appreciate it and this will eliminate any chance of our getting a bad lot.

Yours very truly,

The (name furnished on request)

Furniture Company.

We offer for quick shipment, 400,000 feet 4 x 4 ins. No. 1 Common and Better Selected Red Gum, Plain Sawed, on stick at least one year.

If interested, do not fail to wire us, our expense, for prompt delivered prices.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Toronto, July 15, 1919

No. 13

A Great Economic Loss and Why

It is reported that within the past six weeks more than a score of sawmills, large and small, have been destroyed by fire. Some of these have been caught up in the flames that have spread from a neighboring bush, while others have been wiped out owing to the blaze originating from some unknown cause.

The loss of so many mills is a serious blow to the Canadian industry at this juncture, when there is such great need of increased production in order to meet the abnormal demand for lumber, caused by reconstruction activities since the close of the war.

It is not a pleasing fact to record that Canada has the distinction of having the highest known pro rata fire loss of any country in the world. In round figures the Canadian loss is \$4 per capita per annum, while in the United States it is only \$3 per capita, and in Europe the average has been as low as 33c for each person in the country. Last year it was estimated that the fire loss in Canada was about \$33,000,000. The wiping out of so much valuable property and numerous flourishing industries means a direct economic setback in many more ways than the mere obliteration of the plants themselves.

As pointed out by a contemporary, it has been asked if the insurance company is willing to assume the risk and the owner is amply protected in a monetary sense whose business is it anyway? Why should the manufacturer go to the additional expense of installing the latest appliances in order to safeguard his premises against elimination by flame? It is only necessary to state that even if the damage is covered by insurance, it does not alter the fact that the loss is a decidedly serious one and that the wealth of the country has been decreased by more than the amount of the destruction. There is the wage loss to be considered; the period of idleness by reason of wiping out of the industry; the loss to the community as a whole through decreased production, not to speak of loss of customers, credit, trade connections, local and foreign markets and other factors.

The material used for re-building and equipping a plant could have been employed to greater advantage in producing commercial commodities and thus contributing to the wealth of the nation. Outside of this there is the menace to surrounding buildings which an inadequately protected plant imparts.

That the authorities at Ottawa realize the serious menace of the annual loss is shown by amendments that were recently made to the criminal code of Canada. It provides for the penalizing of carelessness and negligence in respect to fire. Any person who by negligence causes a fire may be fined \$1,000 or imprisoned for two years or both. Negligence is further defined as follows: any owner or occupant of property who has failed to maintain his property as provided for by the by-laws of the community where the property is situated or by any statutory requirement, shall be deemed guilty of negligence. This brings the responsibility home to the person who fails to take the necessary precautionary measures.

The New Aerial Patrol of Forests

What are the possibilities of aeroplanes and hydroplanes in relation to the protection of forests from fires? The question arises in connection with the loan by the Federal Government of two hydroplanes to the St. Maurice Forest Protective Association, which has undertaken to maintain the machines and to bear the cost of the work.

There is a marked divergence of opinion as to the value of the machines having regard to expenditure. The sceptics declare that at the best the machines can only be regarded as a costly auxiliary; they cannot take the place of rangers, lookout stations, telephones, etc., and no part of the present organization can be dispensed with. The working cost, it is claimed, is likely to be very heavy, and if hydroplanes are to be purchased, the outlay will be prohibitive. It is further contended that there will be great difficulty in landing, although Major H. E. Kennedy, a well-known aviator, is of opinion that this side of the subject is exaggerated.

Against these objections must be put the fact that machines can cover an immense area—Major Kennedy put it at 8,000 square miles per machine each day—and the location and reporting of fires thereby made more efficient. The objection as to cost is met by the argument that the prevention of fires, even at an enhanced cost, is an economical measure, and that one large fire will do more damage, measured in dollars and cents, than the entire cost of the aeroplanes to the Association.

The fact is, the employment of the machines is in the nature of an experiment; we have no reliable data as to their cost or as to their ability to do the work efficiently. Innovations of all kinds meet with criticisms from those who are of a conservative temperament, and who are convinced that a system giving good results should not be interfered with. It must not, however, be forgotten that the present protective system has been gradually built up—the addition of portable telephones and the introduction of portable fire pumps being instances where the system has been immensely improved. Looking at the question as a whole, there is no reason why the fire protective associations should not make the experiment of utilizing aeroplanes, particularly when the Federal Government is willing to co-operate by the loan of the machines. The cost falls upon the limit owners, who at the end of the season will be in a position to say whether the expenditure has been justified and whether the advocates of aeroplanes have had their faith confirmed by the results.

An Enemy That Will Not Stay Still

With the advent of warm, dry weather we always have the mosquito, the house fly, the drowning accident, the upset canoe, the inane individual who inquires "if it is hot enough for you," and the destructive forest fire.

Great as has been the progress of late years in scientific forestry and effective measures in safeguarding the wooded wealth of Canada, there appears to be no deterrent to the extent and frequency of fires in the bush, particularly when once they get well under way. From practically every province of the Dominion have come reports during the past few days of much damage done to industrial plants,

mining camps, settlers' homes, growing timber and agricultural crops, through the ravages of an agency which has destroyed more valuable commercial timber in Canada than has been cut in the long history of lumbering, or been wasted by the none too economical methods of pioneer sawmill operators.

Every summer that is dry brings about forest fires, which in many cases are not checked until the fall of heavy rains. While steady advancement has been made in stamping out this enemy of our forests, recent events have only served to demonstrate that greater care, more effective and efficient co-operation and an extension of the facilities already at the command of the rangers, are needed in order to render the timber regions as immune as possible from any further visitations of the devouring enemy.

Progressive and far-seeing as Quebec is in her policy of conservation and preservation of her natural resources, yet at the recent meeting of the Woodlands Section of the Canadian Pulp and Paper Association, some constructive criticism was engaged in by the members. It was decided to urge upon the provincial authorities the advisability of taking, not only further steps in the husbandry of the arboreal assets of the province, but also the enforcement of better regulations covering the cutting of timber on Crown lands.

The keynote of the gathering was reforestation and the recent fires which have swept certain portions of Northern Ontario, Quebec, New Brunswick, Alberta and British Columbia, cannot but tend to drive home the conviction for the necessity of greater vigilance. While a decade or two ago certain people who spoke of the not far-distant future when the apparently inexhaustible timber wealth of Canada would be but a memory, were regarded as day dreamers or forestal fanatics, they had a vision of what we are now being called upon to witness. They saw the menace which has been driven home in late years, by the ravaging element. While much has been effected in the line of protection, much more remains to be done. Any movement—any agitation—that tends to stamp out the fiery foe is worthy of every encouragement and support, from the private citizen, the business man, the manufacturer, the provinces and the Canadian commonwealth.

The Upbuild of the Lumber Industry

It is always interesting to review the past and contrast what was going on a generation or more ago, with the present. Only by linking up by-gone days with those that are now can one get a proper and comprehensive grasp and perspective of the development and progress of any industry, community or country. The historical is ever inviting to the student of the trend and tendencies of the times. By an adequate appreciation and thorough knowledge of what took place in past periods can one realize and appraise the privileges, opportunities and possibilities of the present.

It is a long way from the ox-cart to the high powered automobile, as a means of locomotion, and from travelling by foot to speeding through the air in an aeroplane at one hundred and twenty-five miles per hour. These instances afford a conception of how rapidly transportation facilities have developed in the last few decades. What applies to this sphere of action, can with equal point and effectiveness, be made to bear upon industrial growth and progress.

The "Canada Lumberman" believes that in presenting a short review every month of what was doing in the trade thirty years ago it will provide a pleasant and enlightening feature for, not only the newer exponents of the great lumber industry of Canada, but also the old-timers—the pioneers—who love to haunt the picture gallery of memory and gaze mentally upon the scenes indelibly mirrored upon the walls of that structure—the human tenement—which will not crumble until the call comes—whether it be sooner or later. A modern philosopher has said that you can rob a man of his wealth and his business; of his professional standing and of his friends; of his family and his associations. Calamity, disaster and disease can do many things, but it cannot take from him, who lingers on earth, the memories of delightful scenes and associations of the days that are gone and of the good times enjoyed in the fast receding and dimly distant past. The historical appeals keenly to all, and what is the record

of expansion and uplift in any trade or industry but the regular narrative of the thoughts, movements and aspirations of its exponents, separately and collectively.

Editorial Short Lengths

Any man is better in every way for a holiday now and then. It gives him larger vision, greater perspective and a better sense of the proportion of things. The annual midsummer outing of the Ontario Retail Lumber Dealers will be held this season on August 1 and 2 to the busy lumbering towns of Penetanguishene, Midland and Victoria Harbor. All retailers, whether members of the Association or not, will be cordially welcomed on this educational tour, where there will be much to be heard, seen and learned.

Handling costs in many woodworking establishments are frequently too high by reason of poor planning in the expansion of the plant by the addition of incongruous wings and sheds to a nucleus which the business has outgrown, necessitating shafting mounted at various angles to accommodate machines set wherever floor room is found. The lumber travels a tortuous route to receive the various operations of planing, mortising, etc., sometimes doubling back on its course, until handling costs more than machine processes and much power is wasted turning unnecessary shafting, etc.

According to the Hon. Jules Allard, Minister of Lands and Forests for the Province of Quebec, the revenue from his department for the fiscal year ending June 30, 1919, will show an increase of a million dollars. This is due to the recent Order-in-Council increasing the stumpage and other dues. The Minister, in referring to the forest fire protection policy of the government, asserted that if the plans of the government succeeded in regard to forest fires it would mean that no matter what exploitation of forests there was Quebec would have forests in perpetuity.

There is nothing like optimism, but it can run to extremes. One newspaper in a small town with reckless abandon announces that the sawmill has started operations for the season and the local plant will cut one billion feet in 1919. Considering that the capacity of the average small mill is from 15,000 to 30,000 a day, and the number of working days at the most is possibly 175, the output would not be more than 500,000 feet—to say nothing of a billion. This is the day of big undertakings, big ideas, big companies, and big capitalization. The words millions and billions slip off the tongue without any adequate appreciation of what the terms involve or imply.

Chinese customs are quaint and their beliefs equally peculiar. It was stated by a speaker in Toronto recently that the railroad men of China expect a dead man for every tie placed in the construction of steel highways in that country. If such a superstition prevailed in Canada there would be at the end of one year practically no lords of creation in existence, as one Canadian concern alone has a contract for supplying millions of ties annually to the transportation companies, and this is only a portion of what is required for keeping the roadbeds in repair. The railroad tie business is exceptionally active at the present time, and there is a steady demand for all kinds, owing to extensive construction work.

A warning note has been sounded by a British weekly recently. It brushes aside the popular rumor that a coal famine is approaching, and draws attention instead to the waning forests of the world. Barring Russia and Scandinavia, it point out, no European country has had timber enough for her own needs for a long time past. The United Kingdom has been spending over \$25,000,000 a year for many years on imported timber, most of it coming from Norway and the United States. The latter, it continues, are rapidly coming to the end of their own resources. During the past thirty years they have cut over seven hundred thousand million feet. This is equivalent in weight to 1,400,000,000 tons, or enough to load 250,000 large steam-

ers. Canada, it warns, is now becoming badly off. Pine has doubled in cost since the outbreak of the war, and its price is four times what it was ten years ago. Honduras, once considered a treasure house of tropical timber, is cut almost clear, while Cuba and San Domingo are in a similar plight. The only great forest remaining, this paper points out, is that of the Amazon, and much of that timber is quite inaccessible. Such being the world's condition in timber resources, it is up to the foresters and lumbermen of today to conserve and replant, and to protect their virgin forests. The inevitable result, otherwise, will be to do without.

There are always many solutions offered for every perplexing problem. Ask a dozen different men the cause of the present industrial unrest and labor disturbances and one will obtain a dozen different replies, everyone firmly convinced that his own analytical review of the situation is accurate. Plenty of theory and surmise exist in this world, but too little of the practical. One journal intimates that the present cause of unrest can be largely laid at the door of the demand for too much efficiency in the operation of industrial, commercial and business enterprises. Another attributes it to the spirit of Bolshevism, another to selfishness, and still another to a reaction of the strained relations and high tension prevailing during the war. Other exponents declare that the high cost of living, the avarice of landlords, the greed of gain on the part of capitalists, the offensiveness and vulgar display of the rich, not to speak of war profiteering, predatory wealth and other manifestations of the times, are the chief factors. In the colloquial expression of the present day "You pay your money and take your choice."

With the progress and development of the lumber industry it seems as if this important Canadian activity is being linked more closely each succeeding year with pulp and paper enterprises. The number of outstanding Canadian concerns who are devoting their attention to pulp and paper production is increasingly large and each season witnesses many of the most important lumber corporations branching out into the paper field, which is placing Canada on the map as one of the leading exporters in this great present-day commodity.

The total exports of pulp and paper from the Dominion during the last year reached the huge sum of one hundred million dollars, which is more than double of what the returns were two years ago. The more Canada becomes an exporting country, the more stability and permanence will be given to our Canadian institutions and the development of our own resources.

Previous to the war Canada was largely an importing country and the balance of trade was always on the wrong side. Any nation which becomes aggressive in the foreign field and goes out into the wider avenues of the world's domains and captures business, is able at all times to hold its own in industrial and national life.

A land of almost limitless possibilities is of little potential worth unless its natural resources are developed. As the wilderness may be made to blossom like the rose, so a country may become prosperous. The one factor which spells development and prosperity is its people, says "Conservation of Life."

As its people are healthy, vigorous and happy, so in proportion is the national vitality enhanced. Upon the men and women of Canada rests the responsibility of making or inhibiting its future greatness.

The period of reconstruction is here. Each man and woman must realize now their duty as citizens and, having realized, must strive to their utmost to co-operate each with his neighbor, in making Canada the best in this western hemisphere.

The need is for good, clean, healthy men and women; therefore, be healthy. Strive your utmost to maintain the best of health. Make your home, your workshop, your office and the children's school healthy, not forgetting that the unit of the town or city is the home; and, as we each make our home and its environment healthy, we are each doing our bit to improve the health of the community in which we live and the country generally.

The great advance cannot be made certain without the co-operation of individuals. Make Canada's success a sure thing by joining in the effort at once and building and owning your own home.

The French Government advises that fully 1,500,000 acres of woodland were wiped out by the war in the north and east of that country. Much of this wood was used in trench, road and barracks building, while great portions were blasted to pieces by shells. Nearly 1,000,000 French people were dependent upon these forests for their livelihood six months in the year and the French Government now faces a great economic problem in providing them with other resources until the forests are restored.

One of the most rapidly developing industries in Canada is that of the pulp and paper. The exports of pulp, paper and pulpwood during the past fiscal year will exceed \$100,000,000, nearly all of which went to the United States. While the development of the industry in Canada has been steady, there is not a little conjecture regarding how much more wonderful would have been the expansion, had not the Federal authorities stepped in to regulate and control the price of the finished product. For a long period it was a matter of speculation which would end first—the war or the newsprint investigation at Ottawa, and the war has won out. It seems there is a disposition now on the part of certain publishers interested to have the control of the industry adapted as a war measure, and continued indefinitely. The Canada Pulp and Paper Association, in a recent announcement sent out to the shareholders of pulp and paper companies, states that it is now nearly two and a half years since the federal paper commissioner was appointed, and the Ottawa authorities authorized him to conduct an investigation as to what should be a fair price for paper. That inquiry is still going on, and has cost the government \$75,000, and laid a heavy burden upon the manufacturers. The Association points out that the newsprint producers are still compelled to sell their product in Canada below the market price, and that whatever justification existed during the war for the control of the paper industry, now no longer exists. It is further emphasized that the government should relinquish its control in order to allow this great national undertaking on the part of the Dominion to develop, and particularly to increase the export trade. No other industry in Canada is or has been subject to federal control. The agitation that is now being waged on the part of certain interests across the line to have the embargo lifted on the exportation of unmanufactured pulpwood from Crown lands, in Ontario, Quebec and New Brunswick, is not likely to succeed. Canada has the raw material and will see that it is converted into the finished product within her own domains.

Suggested Policy of the Navy League of Canada

1. To disseminate among the people of Canada a knowledge of the necessity and use of sea power as the keystone of Empire and National defence and commercial prosperity.
2. The advocacy of a policy that Canada shall assume her proper share of the cost and maintenance of protecting her own trade routes and coast defences.
3. The advocacy of a marine policy that will tend to build up our mercantile tonnage.
4. The advocacy of the establishment of a naval reserve force composed of Canadian officers and men who have served in either the Imperial or Canadian Naval forces.
5. The support of all just claims of officers and men of the Royal Canadian Navy and its auxiliaries with regard to pay and pensions, and that merchant officers and men in times of war be put on an equal footing with regard to pay and pensions with officers and men of the Royal Canadian Navy.
6. The support of sailors' institutes in Canadian ports to better the conditions of merchant seamen when ashore.
7. The application of steady pressure upon Parliament and the Government for a better and more efficient administration of the Department of Naval Service, and the abandonment of the present system of the portfolio of Marine, Fisheries and Naval Defence being under the Minister.
8. The application of steady pressure upon all people enjoying the Canadian franchise to see to it that our public men and Members of Parliament insist upon it that all matters pertaining to our maritime policy shall be free from political bias.
9. The encouragement and extension of Naval Colleges and of the Boys' Naval Brigade movement, and the establishment of proper training institutions, with a view to the preparation of boys and men for a seafaring career to the ultimate end that all Canadian ships shall be manned by British-born and the elimination of aliens from the Mercantile Marine.

What Quebec is Doing to Conserve its Timber

Perpetuation of Forests Strongly Advocated by Woodlands Section—Practical Suggestions on Logging, Slash Burning and Tree Planting

A brief summary of the recent meeting of the Woodlands section of the Canadian Pulp and Paper Association at Berthierville and Grand Mere, P. Q., was given in the last edition of the "Canada Lumberman." The following is a fuller report of the proceedings, which are of timely and practical interest to lumbermen, limit holders, pulp and paper manufacturers and others.

The meeting was a success, thanks to the arrangements made by Mr. A. L. Dawe and Mr. E. Beck, of the Canadian Pulp & Paper Association, and the co-operation of the Provincial Government and the Laurentide Company.

The committee of the section decided that afforestation should be the subject to be discussed, and in order to demonstrate what is being done from the practical end, visits to the Government nurseries at Berthierville, and to the Laurentide Co.'s nurseries at Proulx, were arranged. The visitors were able to see hundreds of thousands of trees of many varieties being raised from seed—later to be transplanted in the woods. Mr. G. C. Piche, the chief of the P. Q. forest service, was the guide at Berthierville, and Mr. Ellwood Wilson, forester of the Laurentide Co., at Proulx, both explaining the methods of raising the trees. The Government and the Laurentide Co., both explaining the methods of raising the trees. The Government and the Laurentide Co. entertained the members in good style.

On arrival at Berthierville, the members were entertained at luncheon, and after an inspection of the nurseries, a meeting was held, presided over by Mr. R. P. Kernan, who in discussing the question of afforestation—artificial and natural—said that there was no doubt that opinions as to the supposed unlimited extent of our forests had changed. Some were of opinion that under certain conditions the forest would take care of itself; but when they came to consider artificial reafforestation, the question arose who should pay for the work—the Government or the limit holders? It was essential that the cost should be reasonable—not only for this work, but for clearing up the land by slash burning.

Hon. Mr. Allard Outlines Work

Hon. Jules Allard, in reviewing the work of his department, referred to the establishment of the Berthierville nurseries and the school of forestry. This was done with a view to perpetuate the forests—and he claimed that the department had secured good results. They had endeavored to get rid of the fake settler, and had also taken measures to protect the forests from fires. In that connection he pointed out the growth of the co-operative societies for protecting the forests, and while he did not desire to criticize the methods in other provinces, he believed that the system by which the associations controlled the rangers, etc., was the best. The nurseries had this year furnished over 700,000 trees to companies and private individuals, and had raised altogether over three million trees, which had been sold at cost price. Discussing the stumpage dues, the Minister remarked that a limit holder had said that they were not high enough (laughter), an observation that would not be lost sight of when the next revision was made. He claimed that Quebec Province was, in matters connected with the forest, as far advanced as any other, the great idea being to maintain an asset of immense value to the people.

Scope of the Forest Service

Mr. G. C. Piche, chief forester of Quebec, delivered a thoughtful and instructive address on the history, operation and extent of the nurseries at Berthierville. In the course of his remarks he said:

It affords us a great pleasure to welcome your coming to the Government Nursery at Berthierville, as it shows the great interest which the lumbermen, and more particularly the members of the Canadian Pulp and Paper Association, are taking in the welfare of our forests. It means also that the ideas of reafforestation are receiving a public recognition of their value and, therefore, it eases my task to give you some information about the work that has been carried on here during the past ten years.

The nursery of Berthierville was established in 1908, by Hon. Mr. Turgeon, then Minister of Lands and Forests, in view of furnishing planting material to the private owners of waste lands, and to enable the Government to make objective and practical demonstrations in reafforestation. At the origin, it was a farm of 70 arpents,

which had been abandoned for many years, with the result that the buildings and the land were in a very bad order; even the woodlot exhibited evident signs of mismanagement. The first years were devoted towards re-establishing order throughout the property, and to raise, on a small scale, forest trees seedlings. Consequently, on the 22nd of May, 1908, the first sowings were done, and, in the autumn, we found that the nursery contained a little over 200,000 plants, of which the white pine, the Scotch pine, the Norway spruce and the European larch formed the bulk. I must say that, at first, the neighbouring farmers were very skeptical about the success of our enterprise, but many of them began, during the second year, to admit that there was something in the idea which the Government had endeavored to propagate in the Province, and very soon the nursery was, and is still, the favorite spot where they bring their visitors to see the great curiosity, each spring.

To give to our forestry students a practical knowledge in re-afforestation, it was arranged that they would work two months each spring at the nursery. We must congratulate each class of the Laval Forest School for the good qualities that they displayed during their stay here; indeed, it was very hard for these college boys to be put on the spade, to harrow, or to weed, under the burning sun, but they accepted their instructions cheerfully and worked ten hours per day, just as the ordinary laborers, faithfully and with great interest, and I must, in justice, attribute to them a good deal of the success that we have obtained so far.

It would have been impossible to carry on our programme which meant to increase the production more and more every year, in order to cope with the increasing demand for trees, if we had not obtained the continuous support and the encouragement of the present Minister of Lands and Forests, the Honorable Jules Allard, who, as you know, has helped so much to the development of a sound forest policy in this Province. It was he who obtained for us, each year, the necessary credits from the Government and, with the sinews of war, we were able to increase every year the areas under cultivation.

On the Shifting Sands of Lachute

In 1910, some of the seedlings were big enough to be shipped, and we started the reclamation of the shifting sands in the parish of Lachute. These shifting sands, as you are no doubt aware, are the result of poor methods of cultivation that have exhausted some of the farm lands in that section; gradually the grass cover began to disappear and the sand to show up, and very soon the wind caused the displacement of its particles. Every year things went from bad to worse till finally there was a dune of about 3½ miles in length, broadening in its middle to about one-half mile. The sand not only prevented any cultivation upon the area affected, but also invaded with persistence the adjoining farms so that the area of waste land was increasing year by year. The Government of the Province passed an agreement with seven owners to buy their land at \$1.00 per acre, in order to reforest same, giving them the option to buy it back after 15 years for \$10.00 an acre. We began our work by planting on the western edge of the sand dune, some 20,000 pines and spruces, with a few elms and ashes; these broad leaf trees were used exclusively for experimental purposes. The next year 50,000 more pines were set in to replace part of the trees that had died (about 20 per cent.), and also to increase the surface planted, which is now equal to 45 acres. To-day, the trees have not only maintained their hold on the pure sand, but have grown up to five feet in average—many are ten feet in height; the sand has been stopped from shifting, and a grassy vegetation is exhibiting itself here and there. The result is so satisfactory that the former owner of the land has assured us that he would buy back the land at the expiration of the contract. Similar work has been done at Berthier Junction, in recent years, and it will pay to visit this plantation before leaving here.

The same year we began shipments of trees in various lots to private individuals, colleges, etc., and we have continued this ever since.

In 1911, the Seigneur of Perthuis ordered fifty thousand pine and spruce trees to be set near Notre-Dame-des-Anges, and every year since he has repeated his order for about the same quantity. I have just received a report of these plantations and the white pine trees thereon show a fine growth. According to all those who have seen

Members of the Woodlands Section, Canadian Pulp and Paper Association, photographed on steps of Lauretide Inn at Grand Mere, Que.

these plantations they are a real success and a good example to follow.

Shipped Over 3,000,000 Plants

I believe it was in 1912 that we received our first order from the Lauretide Company, and it is a great pleasure for us to thank the authorities of this progressive society, with our other patrons, for their continuous and generous encouragement. And since, we have received orders from every section of the Province, even from the Province of Ontario, with the result that since the creation of the nursery we have shipped over three million plants.

At the present time the stock of trees in the nursery exceeds four million plants, and, we are preparing ourselves to be in a position to ship every year from two to three million plants, as we believe the demands will not only reach this amount, but will most likely exceed it before long. As a consequence of this undertaking of the government, similar nurseries have been established by the limit holders.

With a few exceptions, all the seeds used at the nursery have been purchased either in America or in Europe, but we would like very much to be able to use the indigenous seeds as they offer us, as you know, greater chances of success.

Therefore I will take advantage of the fact that so many of the limit holders are gathered here to ask for their co-operation in this matter. Gentlemen, we would like to obtain each year from the various parts of the Province a sufficient supply of the seeds of our white and red pine, of our spruce, hemlock, cedar, white and yellow birch. I will ask all those who wish to help us in this matter to give me their names and I will arrange with them for a plan to gather the tree seeds at the right moment, i.e., when they are matured. We will obtain, by this co-operation, not only better seed, but also cheaper seed. It is our ambition to produce, at this nursery, all the seed needed, not only for our work, but also for the other nurseries in the province, and to meet this purpose we intend to build, in the near future, a large seed house, where we would extract the seeds collected after the most modern methods.

The Intensive Production of Plants

Having attained this object, we could then realize our second aim, which is to produce not only two or three million plants per year, but ten to twenty million plants, if needed, in the Province, and I think that before long we may be planting more than that. This intensive production of plants would greatly diminish the cost price, and I calculate that if we could produce here ten million plants per year, we would be in position to sell them, after caring them for two years, for \$1.50 per thousand, whereas we are now asking from three to five dollars per thousand for the same material. These young plants could be transplanted on the various flying nurseries that would be established in the neighborhood of the lands to be reforested, so that they would be acclimatized before the final setting.

During your visit to the nursery, you will see many trees of foreign origin; for example, you will come across the Scotch pine, which will appear to you as a sturdy tree. In fact it gives us great hopes for the reforestation of our waste lands. The Norway spruce, though not always as good as our native white spruce, will also give excellent results, as it grows fairly well. The European and the Japanese larches will certainly interest you, as they appear to be more immune from the attacks of the large saw fly that annihilated our tamarac some thirty years ago. These foreign trees have been tried and we

can recommend them to the planters. We have also extended this research to most of the forest trees growing under the same climatic conditions as we have studied also the bull pine of the Rockies, the black pine of Austria, which is excellent for the plantation on limy soil, the Englemann spruce and the blue spruce of Colorado have been found to be of more value for ornamental purposes than for reforestation; the Douglas fir does not appear yet to be acclimatized enough to our conditions to justify its plantation extensively, yet we have found it to be hardy in some cases, and should this experiment come to a good conclusion I think the nursery will have achieved very much, as it is a first-class tree.

We have also endeavored to produce trees for ornamental purposes. As you are aware the building of the national highways in the Province will necessitate a great amount of plantations, and we expect to have some some ten thousand trees to devote, per year, to this purpose. Everywhere, people desire more and more to beautify the surrounding of their property by the plantation of hedges and trees, and during your travelling from the station to here you will notice that many farmers have called upon us to secure a few trees which we have gladly given them.

The railway companies have also been on the market of late, and we have sold to the Canadian Pacific Railway, the Temiskaming and Northern Ontario Railway, the Canadian Northern railway, many thousand trees for the beautifying of the stations, the holding of the railway banks, etc.

The Arboretum and the Woodlot

Next to the nursery you will come to the arboretum, which has an area of some five acres. It is located between the nursery and the woodlot. It may be interesting to you to learn that ten years ago this land was pastured and covered only with a meagre grass. By preventing the grazing we have allowed the forest to re-establish itself solidly on the eastern half, and you will find there some grey birch of about twenty feet in height with a diameter of three inches. Here and there, we have made plantations of several foreign trees, in order to study their development under these conditions.

Coming to the woodlot, you will find a good example of what could be done similarly by each farmer in this province. Its area is close to twenty-five acres; it rests on a soil formed by a coarse sand of the poorest quality; yet you will find the trees to be in good health, tall, and of a fair size. The composition of the stand is also interesting, as almost each species growing in the Province is represented. In the first half, we have aimed to develop a mixture of maple and white pine, favoring, however, the production of white pine. The other half is devoted to the best trees as they appear,

This woodlot was divided into eight compartments of equal size, and contains 4139 hardwood, 1,228 softwood trees, with a total volume of over 500,000 feet board measure. Two excellent roads, made by the students, divide the property equally. Each tree measuring four inches and up was calipered and numbered, last year, and record is kept of its healthy condition. We expect to continue these measurements every two or three years, so as to judge of the progress and increases in the growth. Each tree that is removed during the year for silvicultural purposes is calipered and scaled, so that we prepare a volume table.

Already one quarter of the forest has been culled under a rigid system of silviculture, and you will see that the forest does not appear to be in a bad state, though the cutting on one compartment yielded seventy-two cords of firewood and two thousand five hundred feet of sawlogs: the whole being valued at eighty-four dollars. These operations will not only increase the value of the stand by

the selection made of the best species and of the best trees, but the growth will also be increased and stimulated by the treatment.

We believe that this study will prove of great value to the farmers and we intend to publish the results of this experiment very soon.

Progressive Forestry Policy Advocated

Having briefly described the work done at the nursery, we must now consider the question of a progressive policy of reforestation for this Province. It is rather surprising that in a country as rich in forests as our province, it is already necessary to discuss this question, but those who have travelled somewhat throughout the country have been surprised to see how quickly the forest has disappeared from the shores of the St. Lawrence and also how the cost of lumber and pulpwood has always been on the increase. First of all we must say that the plantations require so many decades to produce results that it will prevent many persons from investing part of their money in this operation. Yet in Europe many of the old families have retained their rank through the revenues that they derive in the management of forests planted by their ancestors.

There is no reason why farmers, large corporations, the towns and the Government should not consider this matter in a broad view. There is no use in hiding the truth: there are in this province millions of acres of land that have been impoverished either by improper cultivation or by wasteful lumbering, whilst others have been ruined by repeated fires. According to the census reports there would be about three million acres of such lands owned by private people here that would require immediate reforestation. It is certain that upon the timber limits there is also a certain quantity, but as we have no definite survey of same we can only say that its area is very large, perhaps equivalent to that of the private lands.

Why Should We Plant the Waste Lands?

The reason that would induce us to plant the lands not fit for cultivation would be the following:

1. To establish a forest cover on these lands so that they may be again put into value and rendered productive of revenue.
2. To prevent, as in the case of shifting sands, the devastation of the adjoining lands.
3. To increase the amount of timber per acre in the woodlots or timber limits. The studies made of cut over lands show that in numerous sections the stock left is very low, and if we consider the forest as a capital it will naturally take many years before the compound interest accruing each year by the annual growth of the tree will form a sufficient amount of timber to pay the expenses of lumbering the tract a second time.
4. It will be necessary, in many cases, to introduce new species in the forest, especially in the glades, which will increase its wealth.
5. To protect the headwater of streams. It is a well known fact that the forest has a great power to retain the moisture and regulate thereby the seepage.
6. To shelter the basin of the water works. It is not necessary for me to insist upon the good qualities of the water that is found in the gentle streams shadowed by trees in comparison to the poor water found in the ugly brooks running in the open.
7. To furnish the necessary supply of timber for the farmers, and also for lumbermen or paper makers. The increased development of the lumbering industries, especially that of pulp and paper mills, has produced such a big demand upon the forest that we can see, within a relatively short time, some of the companies having either to reduce their production or to purchase new timber holdings. Owing to the enormous amount of capital invested, the interested must necessarily seek for a continuous supply of their raw material.
8. The ownership of waste lands by a private owner is such a burden that, too often, they are abandoned and fall to the charge of the rural municipality, whereas if they were stocked with trees they would have a sufficient future value to induce the owner to pay his taxes.

Does it Pay to Replant?

There has not yet been a complete survey made of the plantations executed in Canada, as many of these plantations are either too young or of too small a size, or made exclusively for experimental purposes. Therefore we are compelled to seek our information, however, from the studies made here upon the growth of trees in height and diameter, we can see that the results recorded elsewhere will certainly be obtained in this country. The State of Massachusetts has published a booklet entitled "The Older Plantations in the Commonwealth of Massachusetts," in which you will find information that will please anyone interested in the matter. For example, a plantation made by John Tingwick of white and Scotch pines, has produced in thirty-eight years from 10,000 to 17,000 feet per acre. Those made fifty-five years ago, on the property

ning from 6 to 17 inches in diameter, and the yield was estimated at 43,000 feet per acre. As you see these results are very good; the tabulation of all these various inventories has enabled the Forest Service of that State to publish an estimate of the future production of white pine, and we find that same, on an average quality of soil, will be as follows:

At the end of 25 years, 32,800 feet board measure.

At the end of 50 years, 46,500 feet board measure.

At the end of 60 years, 53,200 feet board measure.

The Financial Returns Outlined

It will be interesting to know what will be the financial return of this investment, and a good forester could not induce anyone to plant without saying what will be the ultimate results of the work. In the above cases the forester has first taken into account the value of the land, calculated at four dollars per acre, and which naturally must pay a rental; then come the expenses of planting, which were estimated at seven dollars per acre; the taxes must be paid as well as the annual charges of maintenance and protection against fires. Then, all the money spent at the start and afterwards must necessarily pay a rate of interest which was calculated at five per cent. We find that, after deducting all these expenses from the gross returns of the sale of the timber produced, the plantations would give the following net profit:

At the end of 30 years, \$218.5 per acre.

At the end of 40 years, \$102.57 per acre.

At the end of 50 years, \$248.50 per acre.

At the end of 60 years, \$90.17 per acre.

But if the rate of interest was 6 per cent., instead of five, the financial returns would be as follows:

After 30 years, a loss of \$4.44 per acre.

After 40 years, a profit of \$15.76 per acre.

After 50 years a profit of \$151.97 per acre.

After 60 years, a loss of \$114.30 per acre.

It will be seen by all these examples that the best time to cut a white pine plantation would be when it has reached the age of about fifty years, that is when the annual increment in volume will begin to diminish.

The Reproduction of Spruce Plantation

Of course, the pulp and paper makers are more interested in the question of spruce plantations. Here I must say that we have no positive American data on this subject, and must use the European figures, which are also very satisfactory. We find that, on an average quality of soil and locality, a spruce plantation may produce the following quantities of timber. Taking all the material over three inches in diameter at the small end:

At the end of 30 years, 6,700 feet b.m. or 11 cords per acre.

At the end of 40 years, 21,600 feet b.m. or 35 cords per acre.

At the end of 50 years, 36,700 feet b.m. or 61 cords per acre.

At the end of 60 years, 50,600 feet b.m. or 88 cords per acre.

In admitting that these figures could not yet be obtainable in this Province, we can, by reducing them to, say, one third, arrive at good conclusions, as:

After 20 years the stand would furnish 7 cords per acre.

After 40 years the stand would furnish 20 cords per acre.

After 50 years the stand would furnish 36 cords per acre.

After 60 years the stand would furnish 50 cords per acre.

Those who had the chance to see the national forests of France and Germany will admit that these figures are not exaggerated because every spot of these forests is devoted entirely to the production of trees, and of good trees, whereas in this country the good trees will only form, too often, an insignificant proportion of the stand, the remainder being occupied by swamps, inferior species or blanks.

It would be, therefore, of capital importance for the future operators to be assured that, instead of culling, as we do now, from four to ten cords per acre, they could find from twenty-five to fifty cords after an interval of thirty to fifty years, I need not insist upon the effect that such a yield per acre would have on the cost price of lumber; and also on the value of the forest property.

Who Must Do the Reforestation?

A subject of vital interest is "who will do the reforestation?" Owing to the fact that no practical returns can be expected before at least, thirty years after the plantation, it requires, therefore, continuity, or almost permanency in the possession of the property to be reforested. The problem is easily solved as regards the private lands: it will be a sound and profitable investment for the farmer, the towns and the corporations owning some private lands not fit for cultivation, to go into this business as they will do a national work and also create an excellent and steady source of revenue for themselves.

But when we come to the question of reforesting the timberlands leased from the government, the problem is more complex. Though

I have studied it for a long while I have not yet come to a satisfactory conclusion. Will it be better for the Government to do this work exclusively, or should they rather allow or compel the limit holder to make it for and by himself, or should both co-operate in the planting? The later alternative may be the more logical since the Government owns the soil and keeps the title of the property; it might then furnish all the planting material required, and also the technical direction to do the work, whereas the limit holder would defray the expenses of replanting. Someone has raised the important question "Would the limit holder continue to pay the ground rent on the parts of his limits that have been reforested? I think he should continue to do so, if he wants to retain his lease, but I believe that his share of expense, that is the cost of planting, should be kept separated and returned to him as a deduction on stumpage charges either at the moment of the plantation or with the accrued interest of, say, three or four per cent., when the trees planted will have reached maturity. This plan is not altogether satisfactory to me, and I just present it as a basis for discussion rather than as a remedy for the difficulty.

Measures to Promote Reforestation

The first measure to adopt for the welfare of the plantations is unquestionably to give them a satisfactory protection against fires. It would be ridiculous to make a plantation on a tract that would not be easily reached and defended against forest fires. We must carry on further the policy of protection against forest fires. We have already done a good deal in that direction, but we find that much of our forests is still vanishing away in smoke, and this spring we have had several big fires in the Lake St. John and the St. Maurice districts, most of them being caused directly by the railways. Nobody can dispute that fact as we have secured complete evidence in each case establishing that the railway engines have been the cause of two large fires, one at Vandry and the other at Timbrell on the Transcontinental Railway. I firmly believe that we cannot allow our forest wealth to be depleted in such a manner, and the time has come to compel each engine travelling through a forested district to burn something different from coal or wood.

We have water powers in abundance and we should study the electrifying of the railways in the forested regions. Someone will say that this may be too expensive, but it will be less expensive than the burning of fifty square miles of timber limits per year, and, besides, we will be thereby developing our natural resources and diminishing at the same time our dependency for coal upon our neighbors. If we cannot electrify the locomotives, we should have them burn oil, as is done in the Adirondacks and as was done, with success, by the contractors who built the Gouin dam. Anyhow, the railways will have to burn something else than coal or wood, and I hope the Pulp and Paper Association will support any movement in this direction. Many fires may be attributed to the poachers, the fishermen and hunters. Nobody should be allowed to roam at will in the forest. We should make it a close property and oblige everyone to have a permit before entering. More preventive, effective organization should be made. It is much easier to prevent an ill than to cure it, and this is specially true of forest fires. We should have more patrols, telephone lines connecting all depots, etc.

To facilitate the work of the hydroplane service which is being inaugurated, we should establish, in connection with the Geodetic Survey more lookout stations.

Much has been done by the different protective associations, which are doing splendidly, but we must complete our protective service so that the fire danger will be eliminated totally; then we can plant but not before.

In regard to private lands, an important point is that of the taxes. The valuation of the properties reforested should not be modified after trees have been set, as it has been done. A law should be enacted, as early as possible, to protect the citizens who have the courage to reforest against the unjust raising of the land valuation and, thereby, of their taxes. I contend that, for, at least, thirty years, the first valuation of the land planted should not be modified. The appraisal could take place to determine then the actual value of the forest crop separately from that of the soil and this valuation should stand for one decade at least. The ideal would be to repeat these appraisals at intervals of ten years, after the first period has elapsed. We must encourage the work and not prevent foolishly and unjustly the beneficial action of the reforesters.

Control Over Woodworking Plants

I think the time has come for the Government to exercise a full control over the wood working establishments in this Province, as we find, too often, sawmills being located in a locality where there is not enough wood to justify their appearance. Naturally the mill owner, to obtain his raw material, must get it at the expense of the adjoining limits, and this is the beginning of the timber speculation from which we have suffered so much. All the wood working estab-

lishments in the province should be licensed and compelled each year to obtain a permit to operate. The Government will then be in a position to determine if they have enough timber lands to justify their operating and to prevent enlargements when there is no supply in sight.

Up to the present we have found the lumbermen of this province ready to co-operate heartily with the Government in all the reforms made by the administration. Our province can boast, with justice, of having made great progress through this co-operation. Now that the lumber industry in this province is in a rather stable state of equilibrium we can look ahead and adopt a definite policy of reforestation and of management of our forests. We should cause those who waste their forest through bad lumbering to replant their holdings at their expense, while those who have done all they could to timber correctly should be helped to the fullest extent. We should endeavor to make every acre of waste land and of timber land produce the fullest quantity of timber possible. We can make this

Robt. P. Kernan,
Chairman of the Woodlands Section

Ellwood Wilson,
Director of the Woodlands Section

province the largest timber producer in the world, not only in lumber but also in pulp and paper products, and I am sure that with the spirit, the energy, and the co-operation of all we will realize our ambition.

Necessity of Destroying the Slash

Mr. Ellwood Wilson declared that they knew very little about artificial or natural regeneration, but they were gradually gaining knowledge. He was firmly convinced that this work must be carried on if the productivity of the forests was to be maintained. He also felt very strongly on the question of destroying the slash. A recent fire which covered 20 square miles, was over an area piled with logging debris, and it was impossible to cope with a fire under such conditions. The cost of fighting these fires and the waste that occurred was a great deal more than the cost of burning the slash. Even should the cost be heavy, it would be borne by the ultimate consumer of the lumber. As to natural reforestation, he was of opinion that it could not be secured unless there was a change in the system of lumbering. It was an exploded idea that the companies could go back to the woods and cut fresh lumber after a period of 25 years. He was in favor of the total removal of the diameter limit regulation, and would cut certain areas absolutely clean. Mr. Wilson suggested that the question of slash disposal be taken up at once. The cost was a matter of efficiency, for if the employees understood that the work was to be thoroughly done, the cost would be small.

Mr. W. Gerard Power of St. Pacome, agreed with Mr. Wilson as to the urgency of dealing with the slash question. If the Government would amend their regulations as to clean cutting, slash disposal was comparatively easy.

Mr. T. W. Reed described some of the methods in the U. S. for disposing of slash. He also said that in New Hampshire their experience in cutting spruce was that there they cut to diameter, a large number of the smaller trees were subsequently blown down.

After the meeting the members proceeded by train to Three Rivers, and from there to Grand Mere, sleeping on the train.

The Visit to Laurentide Operations

The following morning, after breakfast in the Laurentide Inn of the Laurentide Co., the delegates inspected the Proulx Nurseries of the company. From there they went to Lac a Tortue, where they

were entertained at luncheon by the company. Lieut. S. Graham then gave a demonstration in one of the hydroplanes loaned to the St. Maurice Forest Protective Association for the purpose of reporting fires.

At a subsequent meeting the following resolution was passed:

"That in the opinion of this meeting certain changes in the regulations of lands and forests, governing the cutting of timber on Crown lands, are essential to the preservation and perpetuation of the forests, and it respectfully requests that the executive committee of the Canadian Pulp & Paper Association appoint a committee to co-operate with the existing committee of the Province of Quebec Limit Holders' Association in waiting upon the Government with a view to urging upon it the necessity of an early revision of these regulations to meet present-day conditions."

Another resolution expressed thanks to the Province of Quebec Government and the Hon. Jules Allard for their invaluable work in organizing the preservation and perpetuation of the forests; further,

The hydroplane loaned to the St. Maurice Forest Protective Association for fire patrol work

that in view of the vital value of this organization in the interests of the future welfare of the Province, it was urged that the Government should preserve its present status, in order to ensure the various developments being brought to a satisfactory conclusion.

Votes of thanks were passed to the Provincial Government, Mr. Allard, Mr. Piche, the Laurentide Co., and Mr. Ellwood Wilson for their hospitality and work in connection with the meeting.

Mr. Allard and Mr. Wilson briefly replied.

A Most Representative Gathering

Among those who attended were Hon Jules Allard, Minister of Lands and Forests, Quebec; Messrs. W. G. Power, president of the Canadian Lumbermen's Association, St. Pacome; R. P. Kernan, Donnacona Paper Co., Quebec; P. G. Owen, Quebec, Timber Limit Holders' Association, Quebec; J. M. Dalton, St. Maurice Paper Co., Three Rivers; D. G. A. Galarneau, Three Rivers; H. T. Ham, St. Maurice Paper Co., Three Rivers; S. Beaudoin, St. Emelie; B. C. McLaren, St. Michel des Saints; Louis Marcil, St. Michel des Saints; T. E. Mack, La Tuque; J. A. Roussau, St. Anne de Perade; T. A. Tremblay, Quebec; G. E. Pelletier, Riviere Manie; Rockett Power, Riviere Manie; F. Demers, St. Pacome; J. H. Page, La Tuque; J. D. Brule, Val Brilliant; J. S. Rouleau, Matane; E. S. Coleman, St. Maurice Paper Co., Montreal; J. M. Swaine, Ottawa; H. S. Fleming, Ottawa; W. Little, Montreal; Ben Deacon, Laurentide Co., Grand Mere; R. W. Craig, Ottawa; J. P. MacLaurin, St. Maurice Paper Co., Montreal; H. Sorgius, St. Maurice Forest Protective Association, Three Rivers; R. Liagre, Van Bruyssel; G. G. Blyth, Dominion Parks Branch, Ottawa; S. W. Carter, Laurentide Co., Grand Mere; P. W. Buchanan, Brompton Pulp & Paper Co., East Angus; L. H. Prince, N.B. Forest Service; G. Roy, Mont Joli; H. E. Howe, Belgo-Canadian Pulp & Paper Co., Shawinigan; C. Burrill, Riverside Manufacturing Co., Three Rivers; R. H. Campbell, Director of Forestry, Ottawa; A. McLaurin, St. Maurice Paper Co., Montreal; J. D. Valiquette, St. Laurent; T. E. Draper, Riordon Pulp & Paper Co., St. Jovite; A. J. Ferguson, J. R. Booth, Ottawa; G. E. Loranger, Three Rivers; F. J. Ritchie, Wayagamack Pulp & Paper Co., Three Rivers; T. W. Reed, U. S. Forest Service; H. Kieffer, Montreal; B. F. Avery, Spanish River Pulp Co; Sanche, Abitibi Co.; Ellwood Wilson, Laurentide Co., Grand Mere; G. C. Piche, chief Forester, Province of Quebec; Anderson, Canada Paper Mills, Windsor Mills; R. O. Sweezy, Montreal; J. Stadler, Belgo-Canadian Pulp & Paper Co., Shawinigan, and others.

One of the largest evergreen orders in the history of the nursery trade was recently shipped to a northern lumber company for refor-

estation of the concern's cut-over lands. The shipment consisted of 1,500,000 Norway spruce trees, enough to line a 280 mile road, as from Chicago to St. Louis, if planted only one foot apart. The nursery company kept a gang of more than 50 men at work on this order for two weeks, digging, counting, and packing.

Maj. Brechin Outlines His New Work

British Columbia Lumber Commissioner Intends Opening Forest Products Show Room in Toronto

Major James Brechin, of Victoria, who has been appointed British Columbia Lumber Commissioner for Ontario, as announced recently in the "Canada Lumberman," is still occupying his temporary office at 409 Kent Bldg., Toronto. He is, however, looking for another location where he can have a permanent show-room displaying various forest products of the Pacific Coast province.

Major Brechin has already met a large number of architects, contractors, carpenters, retail and wholesale lumbermen. His mission to the east is solely in the interests of making the merits and qualities of British Columbia stock more widely known and to give definite information and advice regarding the character of coast and mountain woods and the different purposes for which they are best adapted. He will conduct no sales, directly or indirectly, and all the firms requiring Pacific Coast wood goods will place their business through regular wholesale or retail channels, as in the past. Considerable literature will, of course, be distributed and some extensive advertising done. This part of the work will be looked after by Mr. Wm. Turnbull, of Victoria, who is a former widely known newspaper man. Mr. Turnbull is expected in the east in a few days in the interest of a propaganda program.

Major Brechin is of direct Scotch descent, being born near Dundee, and after completing his education at St. Andrew's University, came to Canada nineteen years ago. After spending a short time in various towns in the west, he finally located in Kitchener, B. C., where he engaged in the contracting business, taking out telephone poles, fence posts, etc. He next entered the bridge and building department of the C. P. R. and was in this service for three years, after which he joined the staff of the King Lumber Co., at Cranbrook, B. C., being head accountant for five years and later occupied the responsible post of assistant manager for another five years.

Major Brechin has always taken a deep interest in military matters and enlisted in March, 1916, for overseas service, having raised in Cranbrook "B" Company, 225th B. C. Infantry. Although holding the rank of captain, the subject of this reference reverted to a lieutenant in order to get to France and take part in the fray. He crossed the English channel in April, 1917, with the 102nd Canadians and participated in the scrapping round Vimy Ridge. Some three months later, while doing outpost work in the trenches he and a sergeant who was with him were blown up by a high explosive. On being invalided out, Major Brechin was posted to the Canadian Forestry Corps and put in charge of one of the companies, getting out timber for army huts. He was given the rank of captain and later had supervision of the aeroplane spruce operations in France near the border of Switzerland. He was then given his Majority and was in full command of this work until he left France on Feb. 10th to return to Canada in April last. Shortly after he was offered by the Department of Lands the position of British Columbia Lumber Commissioner for the East and is doing much the same work as was undertaken by L. B. Beale, (now one of his Majesty's Trade Commissioners in Winnipeg) a couple of years ago. Major Brechin's mission is to develop trade and increase the interest and demand for British Columbia products in the east.

Charter Granted McGibbon Lumber Co.

The McGibbon Lumber Co., Limited, of Penetanguishene, Ont., has been incorporated with a capital stock of \$100,000 to conduct the business of timber merchants, sawmill proprietors and timber growers, as well as to carry on operations as ship owners, dealers in wood and builders' supplies, etc. The incorporators are Chas. Archibald McGibbon, Finlay T. McGibbon, Norman C. McGibbon and David D. McGibbon, lumbermen, of Penetanguishene. It will be remembered that Charles McGibbon, head of the company, passed away suddenly on March 22nd last at Glenwood Springs, Colorado, while enroute to visit his son, Lieut. Finlay T. McGibbon, of the McGibbon-Hodgson Lumber Co., Vancouver.

Douglas fir forests are to furnish the seeds for reforesting the denuded areas of France. In working out a plan for reforestation the French Government considered numerous species of trees but finally selected Douglas fir which is known in France as it is in this country as "America's most important wood." It is believed that the soil and climate of France are suitable to the rapid growth and development of Douglas fir forests.

Begins Work on Timber Survey in Ontario

*Roland D. Craig of Commission of Conservation Outlines the Plan of Operation—
What the Inventory Will Show and Its Great Worth to the Province*

Roland D. Craig, Ottawa
Who is conducting the timber survey of Ontario

Roland D. Craig of the Commission of Conservation, Ottawa, who recently completed a valuable and comprehensive survey of forest resources of British Columbia is, as has already been announced in the columns of the "Canada Lumberman," now engaged in similar work in Ontario.

The wisdom and necessity of taking inventories of the wooded wealth of the various provinces of the Dominion has long been recognized, but up until the last few years many Canadians believing that the forest assets of the Dominion were practically inexhaustible and that the supply, like Tennyson's book, would "go on forever," suddenly began to waken up and become conscious that the former cherished hope was both illusive and dangerous. The average citizen in this connection is

like the ordinary adult, who refused to admit, in spite of premonitory symptoms, that he is growing old but gets up some morning to find by a sudden visitation of disease, or other weakness, that he is nearing the final lap of his journey; then recuperative methods are resorted to and every effort put forth to prolong his length of days.

What is true of the individual in this regard is now finding expression in the attitude and policy of Canadians toward the timber possessions of the Dominion.

Belated as has been the start made in this direction, it is gratifying to learn that commendable progress is being made. Not only will Canada know when the task is completed where she is at, so far as sylvan appraisal is concerned, but she will know what stock she has on hand, what future crops can be looked for and by what means reproduction can best be secured and the productivity of the forests sustained.

Mr. Craig who is charge of the work of making a survey of the resources of Ontario—which will occupy about three years—brings to bear upon his task a wide knowledge of the subject in hand.

Has Good Grasp of the Work

He will be calling upon leading limit holders of Ontario and doubtless will be accorded a warm welcome. Since he is working under the direction of a federal body of a non-political and purely investigative character, and one that has wrought much for the advancement and conservation of the resources of Canada the purpose of his mission is worthy of hearty support. The Ontario Government has assured the Commission of Conservation of the fullest measure of sympathy and co-operation. It may be stated that all figures or other information of confidential nature which may be given to the Commission will be treated as such and will be used only for the purpose of enumeration and in arriving at the desired results.

Mr. Craig, who is an Ontario boy, was born in Ailsa Craig and after spending a few years in that town, his parents moved to Guelph where he attended the Collegiate Institute and took a course in the Ontario Agricultural College, graduating with the degree of B. S. A. This was in 1898. After being on the staff of that institution a couple of years he left for Cornell University where he was awarded the degree of Forest Engineer. In 1903-4 he was engaged with the U. S. Forest Service in California; returning to Canada he became identified with the Dominion Forestry Branch and spent three years as inspector of forest reserves; in 1907 he was offered an attractive connection in the West and left Ottawa to take up his residence in Vancouver, where he was managing-director of the Adams-Powell Timber Company for three years and for the succeeding five was with the Dominion Lumber & Timber Company. In 1915 he joined the Commission of Conservation, being engaged for two years in making a survey of the forests of the Pacific Coast province. While pursuing this work he was requested by the Imperial Minister of Muni-

tions to undertake the inspection the areoplane spruce lumber and until the operation terminated he occupied the position of district inspector. Since then he has been laboring for the Commission of Conservation on the forest survey of Ontario.

In undertaking this task the province will be divided into five large drainage areas. These will consist of the southern portion of Ontario; the Ottawa Valley; the Georgian Bay district; the Lake Superior region and the north. The survey when completed, will not only furnish a reliable estimate of the present amount standing timber in the province, its location, distribution of species etc., but data and maps will be supplied showing the area covered by the forests, the area suitable for agriculture, the waste land and the areas which should be devoted to the production of forests.

This basic information, which has never before been available, will afford some concrete facts relating to the timber resources of Ontario. It may be stated that no attempt will be made to cruise the whole province—since a large proportion of the merchantable timber is in private holdings, for which the holders have detailed cruises—but reconnaissance work will be undertaken to supplement the detailed data which is available. There is no intention, however, to duplicate work that has already been carried out by private interests. The lumbermen of the west, Mr. Craig says, were extremely considerate and helpful, and there is no doubt but that the same degree of courtesy and assistance will be extended by the limit holders and saw mill operators in Ontario.

Mr. Craig is the gentleman whose portrait appears on the left in this article. It is true that this likeness was used in the last edition of the "Canada Lumberman" but through an error the name of Mr. James White, of Ottawa, Assistant to the Chairman of the Commission of Conservation, appeared below the picture. However, no unpleasant complications have followed, as both Mr. White and Mr. Craig are working for the highest and best interests of Canada in conducting the important enterprise in hand. This is not the first time, either on the street or in the press, that one good man has been mistaken for another. On the right is a photograph of Mr. White.

Mr. Craig will be visiting the leading wooded centres of Ontario and calling personally upon the lumbermen of the province during the coming months in the timely and important mission that he is undertaking under the direction of the Commission of Conservation.

James White, Ottawa,
Assistant to Chairman, Commission of Conservation

New Eastern Sawmill Begins Operations

The new sawmill at Newcastle, N. B., built by James Robinson, of Millerton, began operations a short time ago, and for the first day's work produced forty thousand feet of lumber without mishap or any delays due to necessary alterations or readjustments and has been successfully operating since. The structure itself is 200 feet long by 60 feet wide, two stories high with a smaller plan third floor for filing room. It is a band mill with Yeats resaw, twin edgers, slash-ers, cut off saws, box board machine, and lath machine with a system of live rolls to distribute the manufactured lumber to all parts of the piling yard. The equipment is driven by two 150 horse power engines which make it a direct drive mill throughout. The capacity of the plant is seventy-five thousand superficial feet for each shift. The construction work was done by James Sullivan, of Newcastle, N. B., who remains in Mr. Robinson's employ as operating superintendent.

Standardization of Lumber and Mouldings

Representative Gathering Endorses Uniform Sizes and General Plan for Grading— Progressive Step Taken on Basis of Manufacture on New Lines

The first American Lumber Congress, held some months ago, in Chicago, Ill., adopted a resolution that there should be uniformity of sizes in all lumber and mouldings manufactured in the United States, and that for the accomplishment of this purpose the Secretary-Manager of the National Lumber Manufacturers' Association, be requested to call a meeting of the proper representatives of all associations represented in the Congress at Chicago.

In compliance with this resolution representatives of lumber associations, manufacturers, wholesalers, retailers, architects, engineers, etc., met lately in Chicago, to discuss the points involved. Dr. Wilson Compton, Secretary-Manager of the National Lumber Manufacturers' Association, called the assembly to order and introduced Mr. William E. Tuttle, of Westfield, New Jersey, who acted as Chairman.

The discussion was divided into the following topics:

Need of standardization of sizes, grades and forms, by the manufacturer, as well as the consumer.

Confusion in the present nomenclature used in grading rules and by the industry.

Arrangement and order of presentation of articles in a standard form of specification.

A basis of standard lumber sizes among all manufacturers which will meet the need of the consumer, as well as the condition of manufacture and marketing as experienced by the producer.

A general plan of procedure for standardization of grades of lumber, which will place, if possible, material of equal or similar quality under a definite and common term, with clearly stated exceptions where needed.

Standard moulding forms which will eliminate multiplicity in designs having small differences in contour.

Standard grades for wood shingles.

Uniformity is the Watchword

As a result of the discussion on the points named above, the following resolutions were adopted by the conference:

Whereas: There is at present no uniform nomenclature for the different grades in the separate species of woods used in the building and other industries, and

Whereas: This condition is the cause of confusion and loss to the trade and to the public. Be it therefore

Resolved: That this meeting earnestly recommends, and pledges its best efforts to bring about uniformity in the various grades and names of grades in the separate species of woods, and be it further

Resolved: That the manufacturers and wholesale dealers in white pine, yellow pine, hemlock, fir, spruce and all other woods be urged to adopt for their separate woods, uniform grades and names of grades, and that these grades be made uniform for all woods, so far as practicable.

The Standardization of Grades

Resolved, that, approving the idea of uniform size, both in width and thickness, the question of uniform size of lumber be submitted to the Engineering Bureau of the National Lumber Manufacturers' Association, and that after a careful investigation they submit their conclusions to both retailers and manufacturers and to all those represented at this meeting and others interested.

Resolved, that the Engineering Bureau of the National Lumber Manufacturers' Association be requested in consultation with the wholesalers, manufacturers, retailers, architects, engineers, Forest Products Laboratory and other people and organizations interested, to prepare a plan for grading lumber which will include the names of grades, definitions of grades, definitions of defects, sizes, patterns of mouldings and submit it with complete arguments to the various manufacturing associations.

Resolved, that the question of the most logical form and arrangement of the general classification of data now common to all grading rules, be referred to the Engineering Bureau of the National Lumber Manufacturers' Association for study and recommendation to the various associations issuing such rules.

Standard Moulding Forms

Resolved, that the National Lumber Manufacturers' Association be instructed to prepare standards for mouldings and wood forms. The work to be supervised by a committee comprised of representatives of the lumber manufacturers associations, Wholesale Sash and

Door Associations and American Institute of Architects. Templates of forms thus standardized to be prepared by the National Lumber Manufacturers' Association, for distribution to the manufacturers.

Standard Grade for Wood Shingles

Resolved, that it is the sense of this meeting, that inasmuch as shingles are manufactured by only five of the associations that the matter of standardizing shingle grades be referred to the Shingle Committee, which is a sub-committee of the Trade Extension Committee of the National Lumber Manufacturers' Association.

The desire for true co-operation among the representatives of the manufacturers, distributors, and consumers of lumber present in making needed changes in sizes and methods of grading, was apparent in all the discussions, and the National Lumber Manufacturers' Association was evidently recognized by all as the proper medium through which such changes should be suggested. The representatives of the manufacturers stated their willingness to furnish material according to definite standards to be determined by a thorough investigation of manufacturing and marketing conditions carried out by practical lumbermen and engineers.

The result of the meeting was to bring the producer and distributor to a closer understanding of the needs of the consumer, as well as to show the consumer the difficulties faced in meeting these requirements in some cases. Also, to impress upon the lumber industry the value of a central organization which may act as a forum for all interested in the product, and be in a position to advise the industry and the public through its various departments of specialized work.

Lumber Firm Appoints Traffic Manager

J. E. Green, who for sixteen years was in the employ of the Canadian Pacific Railway, has been appointed traffic manager for Terry & Gordon, wholesale lumbermen, Toronto, and has entered upon his new position. The rapidly expanding local and foreign business of this firm has necessitated this progressive step in the service and Mr. Green brings to bear upon his new duties a wide acquaintance and thorough grasp of all transportation problems. For six years he was travelling freight agent for the C. P. R. in the Maritime provinces with headquarters at St. John, N. B., and during the past year has resided in Toronto, filling the position of travelling freight agent for the C. P. R. between Toronto and Smith's Falls and later acting as contracting agent for the eastern portion of the city. Mr. Green will devote special attention to the export and eastern trade of Terry & Gordon.

Moose Lake Lumber Company Organize

The Moose Lake Lumber Company, Limited, are the successors to C. J. Price, lumber dealer, Cobalt, Ont., and a charter has been granted the new firm with a share capital of \$40,000. The officers of the company are C. J. Price, president; John Ough, vice-president; and A. W. Harrington, sec.-treas. and manager for the present. The Moose Lake Lumber Company will operate timber limits and cut logs, manufacturing the same into lumber which will be sold to the local trade and also wholesale. The company have a good sawmill which is located at Moose Lake. Mr. Price, head of the organization, has for many years been a widely known dealer in everything in rough and dressed lumber, sash, doors, stull and lagging timber and has carried out important contracts.

Kinds of Wood Used in Ontario

A total of thirty-four different kinds of wood are reported as being used by the wood-using industries of Ontario, as stated in a bulletin issued by the Forestry Branch, Department of the Interior. Of the woods used, the greater part is grown in the province, particularly pine, spruce, maple, hemlock, and oak, which are used in greater quantity than any others. Elm, basswood, birch, beech, the group which comes next in quantity used, are also mostly purchased in Ontario. Ash, balsam, fir, hickory, cypress and gum, which stand next in quantity used, are mostly imported, with the exception of the first two named, while the next group, chestnut, poplar, ironwood, tulip, and Douglas fir, are nearly all home-grown except the last two. The other groups are walnut, Spanish cedar, butternut, apple and willow and sycamore, red cedar, ebony and sumac.

Just Thirty Years Ago

Interesting items from the files of the July edition of the "Canada Lumberman" away back in 1889

To trace the history, expansion and development of any trade is instructive and entertaining. In this issue of the "Canada Lumberman" is presented a comprehensive summary of the activities, enterprises and trade problems of the Canadian lumber industry, as recorded in our columns some thirty years ago. It is believed that this feature will be one of timely interest and, in view of the many questions arising today in the industrial, manufacturing and transportation arenas, will be perused each month with appreciation.

* * * * *

Messrs. Gillies Bros., of Braeside, intend cutting a lot of logs and dimensions at their Coulouge depot the coming season.

* * * * *

Large quantities of lumber, especially cut for the South American market, are now going forward from Ottawa to the United States for export for Buenos Ayres.

* * * * *

The lumber interests are extending in British Columbia but lack of shipping facilities somewhat curtails the export trade in this line, freights being high.

* * * * *

There is an active demand for ocean tonnage at Quebec, which is likely to be brisk for some time. The scarcity of stevedores and longshoremen is likely to cause considerable delay in loading vessels now in port.

* * * * *

The cedar industry is a prominent factor in the rapid advancement of that smart little town in the Manitoulin district, known as Gore Bay. This class of wood is not only plentiful but is of a superior quality.

* * * * *

The Canadian Gazette of July 20th, officially proclaims the reduction of the export duty on pine logs from \$3 to \$2 per thousand feet board measure, the same to be deemed to have gone into effect upon the first day of July.

* * * * *

Mr. J. D. Shire, of Bracebridge, has got out his full stock of logs, about four million feet; which will take a good season to cut. He has the work well forward, however, and if it be possible the whole will be run through before the snow flies.

* * * * *

There has been considerable activity in the freight market during the past month. Rates are now running at: Quebec to Liverpool, deals 68s 9d; timber 28s; Quebec to Bristol channel, deals 75s; Quebec to Cork, deals 71s 3d; Montreal to Buenos Ayres, lumber \$18.

* * * * *

The wages paid workers in the woods and sawmills in British Columbia are: Mill hands, \$35 to \$65 per month; axemen and swampers, \$35 to \$45 per month; teamsters at mills, \$2 to \$2.50 per day; teamsters in the woods, \$60 to \$65 per month. Board is from \$8 to \$10 per week.

* * * * *

The bulk of the square timber which came from the Upper Ottawa lumbering districts this spring, was sold before it left the bush to speculators on the American side. Mr. William Wade left with his raft on the 10th. It consisted of 150 cribs and was sold to Quebec parties.

* * * * *

The lack of rain for several weeks has dried up the small streams in the Moncton section of New Brunswick, and seldom has the water been so low as it now is. As a consequence nearly all the water mills are shut down or about to do so, and some of the steam mills are short of logs. Messrs. Wright & Cushing, however, managed to get half a million feet of logs down the Little River to their mills near Salisbury. They had taken the precaution to build a dam across

the river behind their logs, and on the dam being opened, the logs were carried down in fine style.

* * * * *

Another new method of utilizing sawdust has recently come to light in the Ottawa district. At Deseronto bricks are now being made of sawdust and are known as the terra cotta brick. The bricks composing the flooring of the printing bureau at Ottawa are of this kind. The flooring is all arched, and the planking on the top. The sawdust bricks are very light and are porous.

* * * * *

Some rafts of square timber belonging to Messrs. Klock passed through Long Sault rapids last month. The first portion of the raft came through all right, but the second detachment struck a rock and went to pieces, the men managing to get ashore. The pilot immediately after banded together eight cribs and took them down safely, a performance that has never been done before.

* * * * *

Some of the Canadian papers are taking up the question of a national currency for Canada. We see no just reason why Canada cannot have a currency that will circulate at its face value all over the Dominion, and be just as good in the States as the United States money is in Canada, but we would prefer to have it based on a more honest footing than the national banking system of the United States

* * * * *

A very sensible suggestion has been made by the Canadian Institute. A deputation from that body waited upon the Hon. A. S. Hardy, the Ontario Commissioner of Crown Lands, last week to explain a scheme for a great provincial park for Ontario. They propose a tract of land 36 miles long by 28 miles wide, comprising about 1,000 square miles, back of Haliburton in the Nipissing district, should be set apart and called the Algonquin Park.

* * * * *

The lumber trade at Ottawa has assumed large proportions and is constantly increasing. At this time of the year the Ottawa district is a veritable hive of industry. The driving and sorting of logs, the hum of a score or more of mills, the loading of cars and steamers all tend to give it a busy appearance. Ottawa lumbermen carried over 150,000,000 feet last winter, very little of which is now in first hands. wintered for many years, very little of which is now in first hands.

* * * * *

The Picnic Island Mills, at Little Current, owned by Messrs. J. & T. Conlon, have been in operation since the 10th of May and have already cut 1,500,000 feet of lumber and are at present cutting about 100,000 feet per day. They employ about 100 men. The mill is 154 x 50 feet with engine and boiler attached, and consists of two circular saws and gang saws. The firm export large quantities of pine lumber, using a steam barge and consort and steam tug for the purpose.

* * * * *

The statement which has been going the rounds that there is more or less fraud perpetrated upon the St. John and St. Croix rivers under the special provision made whereby Maine logs are floated to St. John and the lumber re-admitted duty free, is denied by the St. John Globe. It says stories of this kind are not true. The United States revenue authorities made many efforts to discover whether any reported frauds have any evidence and that they have been unable to discover them.

* * * * *

The Victoria Lumber Manufacturing Company, Chemainus, last week placed the order with the Wm. Hamilton Mfg. Co., of Peterborough, for five steel boilers 60 x 20 and a lot of other machinery for the new mill. The largest shareholder was out West lately and said that he had no idea that Canadian manufacturers could turn out such machinery as he has seen in British Columbia; but could not under-

stand why prices should be so much higher than the Americans, the wages in the States being only slightly higher.

* * * * *

Taking the trade and navigation returns for 1888 it appears that no distinction as to quality is made under the heading of dutiable lumber imported from the United States into Canada, which, however, in value only reached \$90,723, upon which \$18,164 was collected as duty. On the free list, lumber and timber, plank and boards, sawed, not shaped, planed and otherwise manufactured, of boxwood, cherry, chestnut, gum, hickory, whitewood, there was imported 1,986,000 feet; mahogany, 1,750 feet; oak, 3,744,000 feet; pitch pine, 3,490,000 feet; walnut, 5,714,000 feet, and other woods, 470,000 feet.

* * * * *

The following comparative statement shows the quantity of timber measured and culled at Quebec during the first six months of the present year and the two preceding years:

	1887	1888	1889
Waney white pine	407,706	235,112	690,490
White pine	119,756	142,139	1,312,959
Red pine	328,709	88,993	156,076
Oak	293,263	368,707	412,340
Elm	140,635	103,758	356,499
Ash	25,528	40,963	178,048
Birch and maple	114,228	123,969	231,291

* * * * *

The changes in the lumber duty, which are receiving so much attention in the East, are not affecting British Columbia for exporting to us here amounts to nil and vice versa; but in foreign markets, according to the American Commissioner's report, British Columbia woods command a better price than Puget Sound lumber or Oregon pine, necessitating the "Sound" shippers culling all their loads to enter into competition with Douglas fir. The owner of the largest mills on the "Sound," is through the press, forcing this fact on the people of the United States for what object cannot be ascertained—commercial union probably or annexation.

* * * * *

The following statement shows the quantity of lumber imported into the United States from Canada, and duty paid during the past nine years, the quantity of pine logs exported to the United States, and export duty paid, and the total duty on all lumber imported into Canada from the United States, during the period indicated:

	Lumber exported to United States		Pine Logs exported to United States		Duty paid on lumber imported from U. S.
	Quantity Feet	Duty paid in U. S.	Quantity Feet	Export Duty	
1880	563,963,000	\$1,127,926	2,075,000	\$2,075	\$13,635
1881	562,827,000	1,125,654	2,640,000	2,640	42,913
1882	602,821,000	1,205,642	1,313,000	1,313	74,581
1883	537,517,000	1,075,034	2,863,000	2,863	128,692
1884	557,266,000	1,114,532	974,000	974	40,563
1885	562,542,000	1,125,084	380,000	380	17,522
1886	541,777,000	1,083,554	2,869,000	2,869	16,540
1887	508,304,000	1,016,608	6,350,000	13,107	19,123
1888	553,939,000	1,107,878	468,000	936	18,164
Total	14,990,956,000	9,981,912	19,932,000	27,357	371,736

* * * * *

An Ottawa despatch to the New York Tribune says: The Dominion Government has been informed that R. C. Gibbs, a lumberman of Manistee, Mich., intends this season to test the legality of Canada's action in imposing duty on Canadian sawlogs. The duty was levied by the Dominion Government for the prevention of the destruction of Canadian Forests. The Gibbs firm intend bringing 38,000,000 feet of Georgian Bay logs to Bay City for sawing. They contend that through a treaty between the United States and Canada, signed in 1855, they will not have to pay the duty of \$2 per 1000 feet. Restitution of duties already paid is also talked of. A careful investigation of the case discloses the fact that a treaty placing all kinds of timber on the free list was adopted in 1854, but was terminated in 1866 by the United States. Upon inquiry at the Customs department it was learned that Canada could not be held responsible, as the United States had themselves terminated the treaty in question.

* * * * *

The Chicago Lumber Trade Journal referring to the recent action of the Canadian Government in taking off the duty from lumber under eleven inches in diameter, and reducing the export duty on saw logs from \$3 to \$2 per thousand as it had previously been, says it is a step in the right direction, but does not go far enough to satisfy the American government. "Ask for what you want and take what you can get," was the advice of a great reformer, and it would probably be wise to act upon that advice in the present case. We have not the least doubt but it would answer the purpose of the American government to get all the Canadian logs they require free of duty, to be manufactured in American mills, and at the same retain their import duty on Canadian lumber. The journal referred to says: "Nothing short of a repeal of all export duties on logs and timber by the Do-

minion can satisfy the lumbermen of this country. The Constitution of the United States prohibits retaliation by the imposition of export duties, but it is within the province of Congress to add to the import duty a sum, equal if need be, to double the export duty charged by a government which is disposed to discriminate against this country, and a strong pressure will be brought to bear next winter to this end, if the wisdom of the Canadian officials, in the meantime, does not render it unnecessary." The proposition of the Dominion government to remove all import duties on logs and lumber, providing the American government will reciprocate, is a wise one; but it can hardly be expected that the present tariff Congress will consent to the abolishing of the import duty on Canadian timber.

British Government Timber Representatives

Mr. L. C. Fisher is the representative along with Mr. S. G. Denman, of the British Government Timber Buyer's office in Eastern Canada. Mr. Fisher was born at Horsley, Surrey, England. He lately arrived in this country to take up the above position. For 12 years he has been connected with Mr. Montague L. Meyer's lumber business in London. After being in the office, he went on to the road, and since 1914, when Mr. Meyer was appointed to buy lumber for the British government, has been engaged in government work. He was chief inspector, inspecting lumber cargoes arriving in England to see that the lumber complied with the specifications.

L. C. Fisher, Montreal

S. G. Denman, Montreal

Mr. S. G. Denman began his commercial career in 1905 as office boy in the General Purchasing Department of the C. P. R. In 1912 he went to B. C. as lumber clerk in the same department, and was later promoted to chief clerk B. C. Division, and afterwards relieving purchasing agent, then assistant purchasing agent for the Alberta division with headquarters at Calgary. In 1917 he joined the Imperial Munitions Board, wooden shipbuilding department, at Victoria, under Mr. R. P. Butchart, Director, and in the same year he was asked by Mr. Fitzgerald to take charge, in Ottawa, of the lumber section of the Imperial Munitions Board. In May last Mr. M. L. Meyer appointed him joint Eastern Canada representative, (with Mr. L. C. Fisher) of the British Timber Buyer, with offices in Montreal.

Bandits Rob Northern Logging Camp

Armed bandits recently entered the office of the Schroeder Mills and Timber Co., at Pakesley, Ont., on the line of the C. P. R., and held up the manager, James Ludgate, and his staff. The robbers got away with about \$3,000 in cash. Pakesley is located 206 miles north of Toronto and has been the headquarters of the Schroeder Mills and Timber Co's. camps for the past two years. Masked men entered the premises at dusk and pointing loaded revolvers at the head of Mr. Ludgate and two of his assistants, demanded "hands up." George Knight, the bookkeeper, fired at the men and wounded one of them, but the man was able to accompany his chum and they chased Mr. Ludgate and others at the point of their guns some distance up the C. P. R. tracks and forced Mr. Knight to accompany them, saying they were going to dispose of him, but he escaped and was able to return to the camp.

The first consignment of Douglas fir seeds was taken to France a few weeks ago by P. S. Ridsdale, Secretary of the American Forestry Association, and will be sufficient to grow 50,000 trees, valued, it is estimated, at \$1,000,000.

Big Opportunity for All Joinery Work

Mr. Manbert Declares There is Great Demand in Britain for Canadian Woodenware Lines

Editor, "Canada Lumberman."

Among my other activities I am making some enquiries into the market for wood manufacturers, such as joinery work, turned goods and all wares made largely or primarily of wood. There has been more or less discussion of this business at home, and in my knowledge a certain amount of export trade has run between Canada and this country; but, so far as I can learn, it has always been of minor volume and conducted in too casual a fashion.

At the present moment an undoubted opportunity exists. It would be most unfortunate if we were not to take full advantage of the present situation, and I, therefore, bring this subject to your notice as one warranting some publicity in your paper; thereby I am sure you can do the situation much good. Furthermore, I would suggest that if you know of any other means of giving the matter publicity, you pass the good word along.

Heretofore this trade has been very largely controlled by Sweden, Germany and the United States. At the present moment all goods of this kind are either prohibited from importation outside of the Empire, or are subject to licenses which are difficult of securing. Quite apart then from any sympathetic attitude this gives a substantial preference to Canadian sources of supply, a preference which I repeat it would be unfortunate if Canadians in general, and Ontario in particular, did not take advantage of. Furthermore, it seems particularly opportune at this hour, when so many of our industries in the wood-working line are establishing themselves after unsettlement of the war period. I have received several tangible indications of interest by parties here in developing this trade with Canada. Among these I have before me a letter from F. A. Perrin, of Wither, Perrin & Company, 52 Great Eastern Street, London, following an interview which Mr. Perrin had with me.

In this letter Mr. Perrin confirms his purpose of going to Canada within the next week or ten days to pursue the renewal of some old relationships existing before the war, and the establishing of new ones. He is interested in purchasing the following items:

Dowels.

Broom handles, made from soft wood, such as basswood, spruce.

Ash hay fork handles.

Ash rake handles.

Hickory and maple pick handles.

Hickory and ash hammer handles.

Hickory sledge hammer handles.

Clothes pins.

Wash-boards.

Maple skewers.

Chairs.

Household utensils made in wood.

Practically anything in the turnery and woodware lines.

Other Lines That are Desired

In addition there is an active demand for many other items such as:

Rakes.

Step-ladders.

Pails.

Garden barrows.

Washing machines.

Ironing boards.

Wooden trays.

Paint brush handles.

Etc., etc.

My conviction is that we cannot be too aggressive in getting a full measure of the possibilities of this trade, because if we fail to do our part to meet the demand, it must sooner or later turn to other sources for satisfaction, and a decided opportunity be lost to us.

Yours very truly,

A. C. Manbert,

Timber Commissioner for Ontario.

163 Strand, London, W. C.

June 23, 1919.

Association Will be Represented in Eastern Canada

One of the main objects of the recently-formed Associated Mills, Ltd., of Vancouver, B.C., is to take care of the Eastern Canadian lumber trade. Attention is being devoted, at the outset by the management of this new organization, to the prairie and American trade but it is expected that, within a short time, the association will appoint capable representatives in Ontario and Quebec, as well as other provinces in the east. It had been felt for some time by the concerns

which are affiliated with this association, that combined action was advisable in order to more thoroughly serve the eastern market. The formation by the half dozen mills of one general sales organization was the result and the following are now identified with this new incorporation:—Eburne Sawmills Ltd., Robertson and Hackett Ltd., Dominion Creosoting and Lumber Company Ltd., False Creek Lumber Co., Craig Taylor Lumber Co. and the Alberta Lumber Co. The incorporators are: Messrs. P. D. Roe, George R. Hackett, Dan McLeod, C. McRae, J. A. McMillan and F. C. Taylor, all of whom are connected with the concerns mentioned. The aggregate of these six mills is in the neighborhood of 450,000 feet daily, the output consisting of all lines of Coast common and upper grade lumber, lath, mouldings, etc.

As already stated, the prairie points and some districts in the United States will be organized by the association and representatives have already been appointed. The association, however, believes that it can be of equal service to the retailers in Eastern Canada as well as on the prairies and tentative plans are now under consideration for the placing of capable representatives in some of the larger centres in the east of which due announcement will be made.

Mr. A. T. Robson, formerly manager for the Canford Mills in the Nicola Valley, B. C., has been appointed manager of the association. It should be mentioned that each of the mills referred to has rail connection on either one or more lines, north, south and east.

The Work and Worth of Dr. Fernow

Dr. B. E. Fernow, Dean of the Faculty of Forestry, University of Toronto, has retired from that position after having filled it faithfully and efficiently for the last twelve years. He is one of the foremost forestry experts on the continent and his work and worth are well summed up in the epigrammatic utterance of a representative Canadian journal "There is no abler man in his own department than Dr. Fernow."

The honored head of the forestry department of the Provincial University is now nearing the allotted span of three score years and ten and feels that he needs a well deserved rest as his health has not been of the best for some time, and with the hope of enjoying more freedom from care and a larger measure of leisure asked that he be relieved of his charge. He will return to the United States and hopes if health permits to resume his labors in authorship.

To enter in detail upon the success of the important work that has been carried out in the department of which Dr. Fernow presides, what it has accomplished during the past few years, the splendid records of its graduates, the status to which forestry has been raised and the deepening interest aroused in this important branch of the public service, would be reciting a tale that is familiar to all in any way connected or interested in the conservation and protection of the wooded wealth of the Dominion. He has undertaken most important timber surveys and now, practically, every province in the Dominion is conducting work along this line.

Dr. Fernow resided for a number of years in United States where he occupied leading positions in the service. He was first engaged in the metallurgical business and became chief of the Division of Forestry in the United States Department of Agriculture, which post he held from 1886 until 1898. He was secretary and later chairman of the Executive Committee and subsequently first vice-president of the American Forestry Association, and, also edited for a considerable time their publications. He was Director and Dean of New York State College of Forestry for Cornell University for five years and also consulting engineer and lecturer for the Yale Forest School. Subsequently he was professor of Forestry in the State College of Pennsylvania and since leaving that institution in 1907 has been actively identified with Forestry work in Canada. Among the important positions the duties of which he has discharged with credit to himself and distinction to the organization, are president of the Canadian Society of Forest Engineers and president of the Canadian Forestry Association. A few years ago he donated to the Forestry department of Toronto University, his entire collection of more than 2,500 books, pamphlets and magazines, dealing with Forestry and kindred subjects.

Dr. B. E. Fernow, Toronto, Ont.

Forest Fires Visit Many Provinces

Dangers at One Time Were Great but Rains Came Suddenly—Timber Losses in the West

The forest fires which threatened to do a great deal of damage in Alberta, British Columbia, Northern Ontario, Quebec and Nova Scotia have all been practically wiped out by providential rain falls. Even from far off Newfoundland comes word that the forests along the Reid line, in the ancient colony, have been ablaze. One of the visitors to that island recently concluded that Newfoundland had lost from forest flames during the last few years, \$500,000,000 worth of timber.

In Northern Ontario the fires assumed menacing proportions around Cochrane, Haileybury, Iroquois Falls, Timmins, Porcupine, Boston Creek and other districts. So thick was the smoke at times that trainmen declare that their trains ran blindly, the engineers being unable to see a hundred feet ahead of them. A dense pall of smoke hung over Sault Ste Marie.

In the Cobalt district the outlook for a time was alarming, and while calamity howlers are not welcomed in the north, the most optimistic entertained grave fears for a week that the dread holocaust of 1916 would again visit the country. Fortunately, few, if any, lives, were lost in the recent outbreak of flame. The sweep was due, principally, to the long dry, hot spell, which prevailed for several weeks, interspersed with but few showers of rain and these only local in their extent.

Following the disastrous fires of 1916 better fighting organization was brought into use and much progress has been made in equipping this defensive force so far as rapid transit is concerned, and with observation towers at the various points of vantage. The summers of 1917 and 1918 was comparatively wet and but little damage was done by forest fires.

According to forest superintendent E. H. Finlayson the forest fire in Alberta was the worst in many years. He declared that 30,000,000 feet of valuable timber had already been destroyed. The worst part of the blaze was in the north-west corner of the Stoney Indian Reserve, and it menaced Banff National Park northern outskirts.

The most serious damage was done in the district around Porquois Junction in Northern Ontario. Some 17 miles out of Cochrane the railway section house and other buildings were burned and 10,000 cords of pulpwood destroyed.

For a while the situation around Timmins was very serious, and was watched with a great deal of anxiety. The pulpwood contractors, J. O'Loughlin and T. Lawlor, were the greatest sufferers in that vicinity. Several saw mills had a narrow escape and heavy clouds of smoke filled the atmosphere. Word from New Liskeard says that the saw mill of James McBrayne in Firstbrook Township, with 7,000 feet of lumber and the barn and machinery shed on the farm of Prof. John Sharp, two miles south of the town were destroyed by bush fires.

Ferguson's mill there was partly affected from the same cause. In the case of the Sharp farm, the fire jumped the railway tracks, the main road and a broad field, missing a barn, from which the contents had been removed, and attacking the other building on the lake shore.

Forest fires entered into the Ottawa Valley in the Kippewa district during early July, two of them attacking the limits of the Shepard and Morse Lumber Co.

In the northern district of the Province the Forest Protective Association successfully brought suit against a settler for starting a fire to burn slash without first having secured a permit. The settler was fined \$25. The Association pressed for a conviction as a matter of example.

A recent despatch from Calgary says that the Porcupine Hill forest fire is now under control, but that the flames had destroyed 15,000,000 and 18,000,000 feet of lumber. At Natal, B. C., several people left the town by special train, so threatening did the bush fire become. Forest fires were reported from many districts near Fernie, but the damage was confined mainly to cut-over land and the fire wardens were successful in protecting valuable timber lands.

Forest fires also raged along the line of the Quebec and Lake St. John Railway, doing considerable damage.

When the forest fires broke out in Northern Ontario, the Department of Lands, Forests and Mines, Toronto, sent specific instructions to many of the settlers there how to cope with the danger. The Department has reason to believe that these instructions were not followed out in a number of cases and that there was wanton carelessness on the part of a number of settlers which caused fires to spread over a wider area than they otherwise would have. Hon. G. Howard Ferguson has issued instructions that drastic action be taken against all such settlers and two officers are already at work round-

ing up those who are believed to have been careless with regard to these destructive fires.

Reports reaching the Department of Lands, Forests and Mines indicate that further rain fell between Kapuskasing and O'Brien. While the heavy winds caused the flames to spread in a number of districts, there is evidence that in all districts fire-swept the flames were brought under complete control. Porquois Junction was reported absolutely safe and the Cochrane district is freed from smoke.

A Budget of Briefs From the East

The cry sent out from New Brunswick for shipping relief and for the release of bottoms for the transportation of lumber to the United Kingdom has been heard, for millions of feet are weekly being sent overseas. Steamers and sailing vessels of all kinds are now loading or are on the ocean wave carrying cargos of lumber consigned to the British controller. During the past two weeks several steamers left St. John, N. B., with many millions of feet, while a number of sailing vessels also set sail carrying full cargos to destinations in the United Kingdom. As a result conditions are beginning to become normal, and while there is still a large quantity to be shipped the amount already sent away has greatly relieved the situation. At the present time there are several schooners loading for overseas, among their number being the Jane Palmer, a large five master of 2,823 tons register, which is taking over four million feet.

A four-masted schooner, Herbert Black, 594 tons register, was driven ashore in Preston, England, and from latest advices is a total wreck. She sailed from St. John with a full cargo of lumber and was reported as having arrived safely, but a few days later word came that she had met with a mishap. The lumber was shipped by Dunfield & Co., St. John, N. B. There was nearly a half million feet on the vessel and this was valued at over \$30,000. It is felt that the vast majority of the lumber will be salvaged.

H. Mobbs, of Kettering, England, was in St. John recently interviewing officials of the Provincial Department of Lands and Mines regarding the securing of leases of hardwood lands on which a supply would be available for manufacturing purposes.

Another serious forest fire broke out recently on crown lands in the vicinity of Wapske, a lumbering centre in Victoria County on the Transcontinental Railway. The lands were under lease to the Wapske Lumber Company. Heavy rains quenched the flames or the damage would have been much greater. The damage is estimated at \$25,000, but this figure may be low when a detailed report is available.

Every effort to cope with forest fires in New Brunswick is being made. As a result of a system inaugurated a fire is soon detected and men rushed to the scene to fight the blaze. This system has already proven invaluable and the extra precautions have undoubtedly saved large tracts of valuable timber lands.

A sale of unmarked logs for the province was held recently in St. John, N. B., and resulted in Stetson, Cutler & Company bidding in for all spruce, cedar and pine picked up during the season, and Randolph & Baker for all hemlock.

A report from Grand Falls, N. B., says that the water in the St. John River at that point is very low and few logs are running, a large number being held up in coves and eddies. A crew of men are being put to work to dislodge some of the large jams which have jammed. About a million feet at present lie in the "churn" and alcove below the large falls. This place is considered dangerous for the men who are dislodging the logs with the aid of wire hawsers and donkey engines. The logs are packed in like sardines and some are believed to be resting on the bottom.

There has been an exceptionally heavy movement of logs along the St. John River and the firm of James Holly & Sons, who have charge of all movements on the lower river, report that business has been brisk. They have charge of South Bay where millions of feet are stored and after being surveyed are towed to the mills for manufacture. This firm is one of the oldest in Eastern Canada.

Must Have Provincial Charter

It has been debated in various provinces in Canada whether a company operating under a Dominion charter could be required by law to take out a provincial charter. The Supreme Court of Canada has handed down a judgment deciding in favor of the provinces, which means that a Dominion company can be compelled to bring itself under a provincial companies' act as a condition of carrying on business in the province. The effect of the decision appears to be to make a Dominion charter valueless for practical purposes in those provinces which require such companies to take out a provincial license. The decision would appear to apply to all classes of Dominion companies, including insurance companies. The provinces requiring provincial licensing are Ontario, Manitoba, Saskatchewan, British Columbia and New Brunswick.

Securing Co-operation Against Fires

New Brunswick Enlists the Interest of Boys and Girls to Keep Forests Green and Growing

The "Canada Lumberman" has received from Hon. E. A. Smith, Minister of Lands and Mines for the Province of New Brunswick, two attractive and well-printed booklets, with colored illustrations on the covers, one scene depicting the growth of several fine spruce trees, and the other revealing the destructive work of the fire fiend in the bush. The title of these brochures are "About Camp Fires" and "A Camp Fire Book for Boys and Girls".

The Department of Lands and Mines, New Brunswick, believes in a campaign of education, and instruction in the interest of forest protection, and is of the opinion that upon the plastic minds of the youth of the province many useful and timely lessons may be impressed. Hon. Mr. Smith, in association with the Chief Superintendent of Education of New Brunswick, has recently issued an appeal to the school teachers and school children of the Province for their active co-operation in forest fire protection. All teachers have been requested to read to their pupils an effective and forceful letter and other literature dealing with forest fires. This has already been done in most cases.

The letter is so direct and pointed in its appeal and application that the "Canada Lumberman" believes it is worthy of consideration in other provinces of the Dominion and reproduces the communication, which is signed by Hon. E. A. Smith, Minister of Lands and Mines.

The Government appeals to the assistance of every boy and girl in the fight against the great-enemy of our forests—FIRE. Forest Rangers and Fire Wardens are constantly travelling through the forests watching for signs of fire, but these men have vast areas to cover and cannot be in more than one place at a time. At any moment some careless camper or smoker, by neglecting a burning match, may cause a serious fire that will rage for days and destroy thousands of dollars' worth of timber and sometimes houses and even the lives of the people. Ask your parents to tell you about the Great Miramichi Fire of 1825.

A careless farmer, while clearing his land, may neglect to take precautions against the spread of his bush fire into the surrounding woods. Or a spark from a railway locomotive may fall in the dry leaves and needles on a dry, windy summer's day, and soon be fanned into a raging flame, destroying everything in its path. These things are happening every year. If people only knew how wonderfully valuable the forests are to New Brunswick and how easily they are destroyed by acts of thoughtlessness and neglect, we would soon get rid of this terrible enemy of our forests.

The fire rangers of New Brunswick ask for the help of every boy and girl in this school in preventing forest fires from starting and in instantly notifying a fire ranger, road supervisor, or any official if a forest fire is discovered.

When you go into the woods this summer on a holiday, picnic or camping party, and require a fire, build it on rocks or gravel, and away from the trees or old logs. Make a small fire in the same manner as the first inhabitants of our woods, the Indian, who says, "White man, he build big fire, keep long way back—too hot. Injun

make him small fire, get close." A small camp fire is always best for cooking purposes. When leaving the woods, put your fire completely out with pails of water or earth. If by chance you should see anyone toss a lighted match or burning tobacco in the woods or where it is liable to cause serious results, do not hesitate to warn him of his dangerous act.

New Brunswick must keep her forests green and growing, her logging, pulp and saw mill industries in operation, if she can hope to employ the thousands of returning heroes from overseas, and if she is to supply her share of the lumber required for the reconstruction of Europe.

In addition to the direct loss to the people of New Brunswick through forest fires, there is still another inheritance, viz., the dwellers of the forest, moose, caribou, deer, and also the fur-bearing animals and birds. These require protection from forest fires. They have attracted many sportsmen to our land, and brought prosperity to many of our people.

New Look-out Station Now in Use

Mount Hope look-out, near Penniac, is the first look-out to be utilized by the New Brunswick Forest Service. The tower is about 75 feet high, and a territory is visible at least thirty miles in all directions. A returned soldier will act as look-out man. Arrangements have been made to hook the line up by telephone with the New Brunswick Telephone Co's. office at Fredericton.

In all, about thirty fires have been reported in New Brunswick this season, the greater majority of which were caused by the operation of trains on the railroads, and by farmers neglecting slash fires. Exert gangs of men were employed on about ten of these fires and they were extinguished before reaching any great size, and only in two cases was any serious damage done.

The Minister of Public Works is co-operating with the Minister of Lands and Mines in the important matter of Fire Protection, 474 road supervisors being instructed in case of forest fires to leave their work and employ their men fighting fire at any time. This will undoubtedly result in a considerable assistance in all parts of the province of New Brunswick.

Live Association Does Good Work

One of the most progressive and enthusiastic organizations in the retail lumber line is that of the Quebec City Retail Dealers' Association, the second annual meeting of which was held recently. The officers of this body are well pleased with the results of the past year, and there have been bonds of unity and evidences of friendship and co-operation such as has not been witnessed in the retail ranks for many years.

One of the most important moves made by the Association was in deciding to levy a uniform charge for the delivery of all lumber. This charge is made independent of the price of the stock, and the plan has been found to work out admirably. Another advanced step was taken when it was unanimously agreed that all parties except well-known and highly responsible citizens should pay spot cash for their purchases. The new terms of settlement have been satisfactory all around.

OFFICERS OF QUEBEC CITY RETAIL LUMBER DEALERS ASSOCIATION

L. C. Marquis, President

O. A. Gignac, Director

Nap. Gignac, Director

J. O. Chalifour, Secy.-Treas.

Personal Paragraphs of Interest

L. Rolland, of Blair & Rolland, Montreal, was a recent visitor to Boston.

Walter Mason, of Mason, Gordon & Co., Montreal, is on a business visit to the Pacific Coast.

Lieut. Frank J. MacGibbon, of Fredericton, N.B., who recently returned from overseas, has taken a position with the Snowball Lumber Company of Chatham.

A. D. Huff, formerly traffic manager of the Canadian Export Paper Co., Montreal, has been appointed traffic manager of the Riordon Sales Co., Montreal.

A. E. Gordon, of Terry & Gordon, Toronto, has returned from spending a few weeks in the Muskoka district, where he is erecting a summer home near Whiteside.

Among Toronto lumbermen enjoying a holiday at present with their families are W. J. Lovering, at Port Severn; Alex. Greig, at Bala, and A. E. Cates, at Lake Muskoka.

Maurice Welsh of Campbell, Welsh & Paynes, wholesale lumber dealers, Toronto, is spending the holidays with his family, including "The Twins," at his summer home in Bobcaygeon, Ont.

C. Riordon, of the Riordon Pulp & Paper Co. Ltd., Montreal, signed the majority report of the Royal Commission, on Industrial Relations, and F. Pauze, of U. Pauze & Fils, Montreal, the minority report.

John Stewart, one of the pioneers of West Toronto, who was for some years engaged in the lumber business, died recently in his 69th year. He had resided in Toronto or vicinity all his life and was a well-known citizen. He is survived by one daughter.

Tadashi Hamaski, acting director of the Tokio Trading Co. Ltd., Toyko, is on a visit to Canada, with a view of securing large amounts of pulp for use in Japan. He states that his firm can dispose of 50,000 tons per annum; hitherto a large amount has been purchased in the United States.

A. E. Mackney, manager of the Atlantic-Pacific Lumber Co., Vancouver, and associated with Muir & Kirkpatrick, of Toronto, spent a few days in Toronto, recently, on his way east, on a business trip to Montreal, New York and other centres. He called upon a number of friends in the trade.

Among those who attended the big annual meeting of the National Hardwood Lumber Association, which was held recently in Chicago, were J. W. Jacobson; Frank A. Kent, W. R. Youmans, and J. M. Donovan, Toronto; J. H. Hall, Kitchener, and Geo. Goodfellow, Montreal, and others.

John McComb died recently at St. Stephen, N.B., after an illness of seven months. He was 85 years of age and the last of a family of nine. Mr. McComb was one of the pioneer lumbermen on the St. Croix River and had resided in St. Stephen for about 63 years. He leaves a son and a daughter.

John McDonald, late of Grand View, Man., who for the past three years was engaged in the contracting and lumber line, there, has returned to Ontario, and is at present residing at 63 Duke St., Toronto. It is his intention to re-enter the lumber business in the Haliburton district at an early date.

D. C. A. Galarneau has resigned his position with the Algoma Central and Hudson Bay railway, and has been appointed forester to the St. Maurice Pulp and Paper Company with headquarters at Three Rivers, P.Q. He is now conducting an extensive forest survey upon the limits of this company.

Herman G. Schanche has arrived at Iroquois Falls, where he is establishing his headquarters as chief forester of the Abitibi Power & Paper Co. He will leave shortly for an extended trip through the limits, planning ways and means to be adopted to carry out the reforestation program of the company.

The death of Steele Lewis, only son of E. A. Lewis, St. Thomas, Ont., occurred recently from the after effects of a severe attack of influenza. For some years the late Mr. Lewis carried on a successful law practice in Buffalo, but returned over a year ago to engage in the lumber and coal business with his father. Besides his parents, he leaves one sister to mourn his loss.

Dr. Murdock M. Graham, of Boston, left that city recently with a party of aviators, mechanics, foresters and photographers, and will conduct an exploration by aeroplane of the timber resources of Labrador. Boston lumbermen are reported to have assisted in financing the expedition with a view to the possible development of new sources of supply of pulpwood and lumber.

A. C. Volkmar has severed his connection with the Riordon Pulp and Paper Company, to become forester to the Canada Paper Company, with headquarters at St. Raymond, P.Q. Walter ab Yberg, who has been connected with the Riordon company for some years, and has lately been in charge of their cruising operations in the Kip-

awa district, has been placed in charge of the forestry operations of the company, including the nursery and planting work.

Hon. Jules Allard, Minister of Lands and Forests for the Province of Quebec, will, it is stated, retire to become prothonotary of the district of Montreal. At the meeting of the Woodlands section of the Canadian Pulp & Paper Association, Mr. Allard strongly hinted that he might leave the Government, adding that it would be for purely personal reasons.

F. A. Perrin, managing director of Winther, Perrin & Co., Limited, London, Eng., is spending a few days in Montreal, Toronto and other cities. The firm are large importers of all kinds of woodenware, and the object of Mr. Perrin's visit is to arrange contracts with concerns with whom his company have previously dealt, and also to interest other manufacturers in many articles which it is desirable to import from Canada.

Gillies Bros. Will Rebuild Sawmill

How Historic Plant at Braeside was Completely Wiped Out
— Firm Had Excellent Protective System

The large and well-equipped sawmill of Gillies Bros., Limited, located at Braeside, Ont., was recently wiped out by fire, as announced in the last edition of the "Canada Lumberman." The company have decided to rebuild and expect to have their new mill, which will be of the latest type, ready for next season's operations.

Further particulars regarding the destruction of the historic plant of Gillies Bros. have been received and will prove of much interest in showing how, in spite of the most efficient fire protection system, it is impossible, at times, to overcome the onrush of flames.

The fire started late in the afternoon within a few feet of the south end of the mill, immediately below the sawing floor, when the plant was in full operation. Water was available immediately from two stand pipes, but this had no effect, the flames flashing up to the filing room floor almost immediately and the mill had fallen in less than an hour afterwards. About three hundred and twenty men were on the pay roll the day of the fire. The mill is a total wreck, even the refuse burner having telescoped and slipped down some fifteen feet from its original height.

As stated, the men were all in their places in the mill at the time the blaze occurred, and there was no delay in discovering it or getting water on it. In addition to the fire which was visible, and on which the water was turned, it must have been burning along the bottom of the sawing floor, where it was not reached by water, and not noticed by the men with the hose.

There were twelve standpipes in the mill and adjoining it, within reach, with from 50 to 100 feet of hose and a nozzle attached to each and ready for immediate use. Full pressure was on at the time the flames were discovered.

There were three pumps in the boiler house, all fitted so as to connect up the main water pipe with a 6 in. supply and a 6 in. discharge, but the water supply failed as soon as the steam pipe between the boilers and engines collapsed, about thirty minutes after the fire started, leaving the mill water supply useless. The fire was so hot, however, that the men could not stand near enough to throw water on it.

Gillies Bros. had their own steam fire engine, which was immediately put in use between the mill and the lumber yards to protect the latter, and later on, after the danger to the yards was over, it was used to extinguish the embers of the fire. The engine is equipped with some 1,200 feet of standard rubber-lined hose, and it ran steadily for about twelve hours. They also had the fire engine from the town of Arnprior, about three miles distant, and the fire boat from McLachlin Bros., Arnprior, which gave assistance in keeping the devouring element from spreading, and in quenching the embers. The hose connections of Gillies Bros. are interchangeable with McLachlin Bros., and those of Arnprior, so that in case of necessity all can be used together.

The mill was built in 1870, and was purchased by Gillies Bros. in 1873, and rebuilt and enlarged in 1893, and had a record of 300,000 feet per day of ten hours. The company had only been sawing from May 15th, and have a full season's supply of logs in the water.

Lumberman Retires from Public Life

N. P. Tanguay, who has represented Wolfe in the Quebec legislature since 1904, retired in the recent provincial contest after long and faithful public service. Mr. Tanguay is a well-known lumberman and general storekeeper of Weedon, Que. He is a Liberal in politics. His successor in Wolfe is J. E. Rheault, Liberal, who was elected by acclamation.

Midsummer Trip Retail Lumbermen

Ontario Party will Visit the Large Mills at Penetang, Midland and Victoria Harbor First Two Days in August

The annual midsummer outing of the members of the Ontario Retail Lumber Dealers' Association will be held on Friday and Saturday, August 1 and 2, to Penetanguishene, Midland and Victoria Harbor. The busy saw mills and wood products industries in these towns will be visited and it is expected there will be a large and representative attendance from all parts of the province. The trip will prove a delightful and instructive week-end jaunt.

The party will leave Toronto by the G. T. R. at 5 o'clock in the afternoon of July 31 and will reach Penetanguishene at 9.55 the same evening. They will spend the night in the hotels in that town.

On the morning of Friday, August 1, the members will visit the manufacturing plants in Penetanguishene and in the afternoon will inspect the various woodworking industries of Midland.

On Saturday, August 2, the retail lumbermen will journey to Victoria Harbor to view the mill and yards of the Victoria Harbor Lumber Co. and will be tendered a luncheon as guests of the Victoria Harbor Lumber Co.

Mr. Manley Chew, of Midlands, has kindly placed his tugs at the disposal of the party in making the trips from Penetanguishene to Midland and from Midland to Victoria Harbor. Persons desiring to return to Toronto may do so on the 2.54 train on the afternoon of Saturday, August 2, but it is expected that a large number will spend Sunday and Monday at some of the delightful resorts on the Georgian Bay as Monday, August 4, is civic holiday not only in Toronto but in several other cities and towns in Ontario.

Every retail lumberman whether a member of the association or not is invited to take in this educative and pleasant excursion and will be afforded an excellent opportunity of learning how the lumber that he sells is produced. All those who do not find it convenient to join the company leaving Toronto on the afternoon of Thursday, July 31, should make arrangements to reach Penetanguishene by some other route so as to be there on the morning of August 1. "Come one, come all" is the slogan.

Four Hundred Houses Being Erected

The number of municipalities in the Province of Ontario now operating under the Ontario Housing Act has grown to 74, and includes 17 cities, 35 towns, 14 villages and 10 townships. About 40 municipalities are actually building houses. Over 1,200 plans have been approved by the director, Mr. J. A. Ellis, and over 400 houses are in the course of construction.

The village of New Toronto has let contracts for over 50 houses. They are building a six-roomed solid brick house for \$3,000. It is probable that Windsor will erect the largest number of houses of any municipality in the Province.

Travelling inspectors were appointed recently, and they are visiting the various municipalities which are erecting houses. Seven of the nine inspectors are returned soldiers.

Price Bros are Making Extensions

Judgment has been delivered in the case of Price Bros. & Co., of Quebec, against whom information was laid sometime ago for operating one of their paper plants at Kenogami on Sunday. The Court of Appeal rendered judgment against the company on the question of Sunday labor on June 27th and Price Bros. are now considering the advisability of carrying the matter to a higher tribunal.

The installation of a further unit at the company's paper mill at Kenogami is proceeding satisfactorily and it is expected it will be in operation about December. The high scale of wages prevailing and the excessive cost of all camp material is bound, in the opinion of Price Bros., to raise the price of wood. The company are building a new and thoroughly up-to-date sawmill at Matane, Que., which will be ready for next season's cut.

Quebec Lumbermen Retain Their Seats

Ed. Ouellette, who was recently returned by acclamation for Yamaska in the Quebec province elections, is vice-president and general manager of the Tourville Lumber Mills, Limited, Montreal and Louiseville. He was first elected a member of the Quebec legislature in 1905 and has been returned at each subsequent election. Mr. Ouellette, who is past president of the Quebec Limit Holders' Association, is a director of several large concerns and a wire awake and progressive citizen. He resides at Pierreville Mills, Que., and is a Liberal in politics.

Rodolphe Tourville, president of the Tourville Lumber Mills

Company, won his political fight and retains his seat in Maskinonge Co. He was first honored with the confidence of his constituents in 1912 and since then has always been able to write M.L.A. after his name. Mr. Tourville was born in Montreal in 1878 and is an aggressive and broad minded business man, interested in a large number of companies. In politics he is a Liberal.

It will also be of interest to his many friends in the lumber trade that Hon. Jules Allard, Minister of Lands and Forests, will be a member of the next legislature. He has a seat in the Legislative Council. Other widely known lumbermen who hold seats in the Legislative Council are Hon. Geo. Bryson, Fort Coulogne, Pontiac Co., and Hon. John C. Kaine, of Stadacona Division, Quebec City.

Mr. Stewart Pays Visit to the West

E. Stewart, Toronto

Elihu Stewart, of Toronto, managing director of the Canada Timber and Lands Company, left recently on a business trip to British Columbia and will spend some time in the West in the interests of the organization which he represents. At the annual meeting of the company, which was held lately, L. A. Hamilton of Toronto was elected president; F. F. Telfer, of Toronto, vice-president; Elihu Stewart, managing-director and secretary-treasurer; and R. R. Grant, of Toronto, assistant secretary.

It has been decided to start logging operations on the limits of the company which are located on the main coast line, 140 miles north of Vancouver, along the Toba River. The company own 23 sq. miles of heavily wooded lands of fir, cedar, spruce and some hemlock. The latest logging equipment has been purchased consisting of three donkey engines and all other accessories and it is expected that 100,000 feet will be taken out every day. Logging will be begun at once and will be pushed vigorously.

It is some years since Mr. Stewart paid a visit to the West. He is vice-president of the Spruce Falls Pulp and Paper Co., who intend erecting a hundred and fifty ton pulp and paper mill at Kapuskasing, Ont., and was superintendent of Forestry for Canada from 1899 to 1907. Mr. Stewart is also a former president of the Ontario Land Surveyors' Association and of the Canadian Forestry Association, being a delegate from the federal government to the American Forestry Congress in 1905 and during that year making a tour of inspection of the forests of France and Germany. For many years he was engaged on Crown land surveys in Ontario and the prairie provinces and was a Commissioner appointed by the Dominion government in delimiting the boundary between Ontario and Manitoba. Mr. Stewart resides at Collingwood, of which town he is a former Mayor and his office is at 88 King Street East, Toronto.

Would Eliminate All Orientals in Mills

Some phases of the present industrial condition in Victoria, B. C., from the standpoint of labor, were represented to the royal commission on industrial relations, which sat in that city recently.

Robert Donachie, representing the carpenters and mill employees, referred to the efforts made recently to eliminate Orientals from working in the mills and the fixing of a wage scale there and claimed labor found it difficult to enter into any negotiations on the subject with the employers. If the unions could not secure satisfaction they were prepared, he said, to take the same stand as was taken by the Australian unions seven years ago, when large orders were given by Britain to Australian firms.

There were nine mills, employing 2,000 Orientals in the Victoria district. It was proposed to substitute whites for Orientals.

"Does your request embrace a clean sweep of the Orientals?" asked Chairman Mathers.

"Absolutely," was the reply. "There are some 2,500 whites idle in Victoria."

Witness stated that with some rare exceptions employers of labor in this district have confidence in organized labor. So far as the saw-mills were concerned, sanitary conditions were very bad, and he believed the law prohibiting any but whites to operate certain machines was being violated and Chinese utilized thereon.

The Forest Reserve of Alberta

The Province of Alberta has 16,711,000 acres of timber lands under Forest Reserve. This comprises about 14 per cent. of the total area of the province. With reasonable protection from fires, the supply of timber products is assured for all time. Most of the land under Forest Reserve is not well adapted for agriculture. It is, therefore, the policy of the Government to preserve the existing species and propagate new types in order to supply adequately the needs of the people for home consumption, and export for the future. Moreover, the Reserves are generally situated near the sources of the rivers and streams of the Province, and thereby ensure the natural regulation and conservation of the water supply and water power.

The estimated stand of the timber as far as surveyed in the existing Reserves, reaches the enormous estimate of 21,000,000,000 board feet. For the last year in which figures are available (namely the fiscal year ending March 31st, 1918), the annual production was as follows:

	Ft. B. M.
Lumber	67,024,000
Lath	3,488,400
Railway ties	50,955
Shingles	1,276,250
Piling props	2,197,000

Besides these products, great numbers of fence posts, telephone and telegraph poles, and fence rails are cut each year. The cutting of timber of Forest Reserves is strictly regulated by the Government under license. At the present time, there are 2,030 square miles of timber lands under license, for which the licenses pay a revenue to the Government for the privilege of taking timber.

A system of permits to settlers and homesteaders is in vogue, whereby they may secure timber supplies for fencing and building. and during the last fiscal year, over 11,613,000 feet B.M. of logs and lumber have been cut by the homesteaders for improvements on their homesteads. This is a very important consideration to the new settler in Alberta. Timber for building and fencing is generally close at hand in the northern half of the province, at very little cost for these necessary improvements.

Systematic Burning of Logging Slash

A recent discussion of logging costs in national forests in the United States refers to the question of brush disposal. In California, for example, it is the general practice to require operators to pile and burn all brush resulting from the felled timber and snags. The work of piling is often subcontracted at rates ranging from 17 cents to 25 cents per thousand feet of timber cut. Records of brush-piling work done directly under the supervision of the company show that the cost ranges from 11 cents to 26 cents per thousand feet of timber cut. Brush burning is usually done by the operator at a cost of from 2 cents to 5 cents per thousand feet of the timber cut, with an average of possibly 4 cents per thousand. There has recently been a sharp advance in labor costs. A fair present average, therefore, for piling and burning is 30 cents per thousand feet.

Corresponding costs in eastern Canada would, of course, be higher, due to the smaller size of the timber, with consequent larger amount of brush per unit of timber cut. However, the importance of brush disposal from the standpoint of decreasing damage to the forest, due to fire, insect and fungi, is so great that the problem calls imperatively for solution at an early date. Under the auspices of the Woodlands Section of the Canadian Pulp and Paper Association, experiments are to be made on a number of operations this year to determine the feasibility and cost of reducing the menace by systematic burning of the logging slash, under safe conditions. Logging slash is the garbage of the forest, and its disposal is as essential to the health of the forest as is the disposal of city garbage to the health of the community of human beings.

Coopers Look for Good Year's Business

James Innes of the Sutherland-Innes Co., Chatham, Ont., in a recent report, says: We are pleased to say that trade is opening up very nicely this year, and it looks as if we would have at least a normal year's business. Perhaps not just as much rush as some of the war years, but a good, steady business. There, of course, will not be the very high prices that were maintained during the war, but in spite of the high wages and high freight rates, it looks as if the manufacturers and the coopers would have a good year.

While there is no great export trade yet, on account of shortage of room, it is opening up very promisingly, and as soon as ocean room is available, we expect a large demand for all kinds of slack and tight barrel stock for export.

Prices are now fairly steady, although stock is not moving as rapidly as we would like to see it, and there are some accumulations at the mills. The hoop situation is the weakest, as there are more

hoops being manufactured than are required for present consumption, and a great many of these hoops are being made by mills that cannot hold their goods until they are actually wanted.

The outlook for cereal crops is excellent, and reports, so far, on the fruit trees, are better than they have been for years. I think, on the whole, the manufacturers have reason to feel a little optimistic at the present time.

Tight barrel stock especially is in good demand, and as the production has been very light lately, there have been no stocks accumulating. In fact, in some lines, there has been an entire clearance, at the mills and yards, and little prospect of replacing for some time to come. Prices are being maintained. In fact, the tendency is for higher prices, on account of the difficulty of obtaining raw material, at the present time. What tight barrel stock men want now is some way to enable them to replenish their stocks at the mills.

Fraser Valley Wants Pulp Industry

An important meeting was held in the Board of Trade rooms, New Westminster, recently when representatives of several boards of trade throughout the Fraser Valley met to consider the ultimate clearing and seeding of 400,000 acres of arable, uncleared, uncultivated land in the Fraser Valley, and the establishment of a pulp mill.

The one great drawback to the agricultural development of this, one of the most fertile valleys in the world, has always been the cost of clearing the land, and the second great drawback has been to keep the logged-off lands clear after the timber has been taken therefrom.

Up to this time practically no effort has been made to have these logged-off areas seeded down and in this way make them available for pasturing thousands of cattle and hundreds of thousands of sheep.

Brush that springs up after the land has been logged is hard enough to deal with, but this can be slashed and burned. The real enemy that renders this land valueless for pasturage purposes are the ferns. These cannot be got rid of till the land is ploughed, and it is a much more expensive procedure to take the green stumps out of the land than stumps that have been allowed to rot for a few years while the land has been used for pasture.

The first object of the meeting was to bring pressure on the governments to enact legislation making it compulsory for any party removing timber from land to clear the land of everything but the stumps and to seed it down with suitable grass seed.

The second object of the meeting looked to the establishment of a pulp plant at the most convenient point in the valley which will enable a man to take every stick of wood not suitable for mill purposes, off his land at a profit on his work.

Cordwood selling at \$4 to \$4.50 a cord f.o.b. Vancouver, will not do this, and if it did, the demand for cordwood is limited. A number of public spirited citizens have been making enquiries about pulp manufacture, and the information they have secured has been most promising.

Pulp wood sells in the east for from \$8 to \$14 a cord, and after making all necessary allowances, the corresponding price in B. C. would be a profitable one.

Unique Table Made of All Native Woods

The Directors' and General Conference table in the offices of the Eastern Forest Products Association at Bangor, Maine, is an article most unique and at the same time a beautiful piece of furniture. Every piece that shows is different, all of native Maine woods.

H. G. Wood, Executive Secretary of the Association, conceived the idea that such a table would be most appropriate for the committee room, besides serving as an advertisement for Maine lumber products and what could be done with them.

The table is eight feet long and three feet wide, and has five legs. The top is made up of six boards, six inches wide, and of the following woods: White ash, Bird's-eye rock maple, black cherry, curly yellow birch, beech, and quartered white oak.

The legs are of elm, hickory, chestnut, butternut and mahoganized yellow birch. The ledge boards are of Sycamore, white birch, brown ash and cherry birch. Under the margin of the top is a plate to give a thick top effect, which is made of white pine, hemlock, white cedar and red spruce. With the exception of the mahoganized leg, each piece is in natural finish, and the effect is beautiful. The mahoganized leg illustrates the possibility of securing a most deceiving imitation of mahogany wood by using birch.

Morse and Company, of Bangor, who are members of the Association, made the table, and carefully selected each piece from their extensive stock of lumber. The boards of bird's-eye maple and curly birch are exceptionally choice and pretty specimens of those woods, and said by many to be the best ever seen.

Caspar's Air Patrol and How He Felt!

Editor Lumberman Canayenne:

It are some tam since Im wrote you few line so mebee praps it be better sen you few word now.

Im sponse you have hear bout dat airplane patrolle for watch de fire on de bush so dat gone make good subjec for one letter an mebee it gone ope your eye leetle bit too.

Im be read good deal bout dat air beezness an have tink so much on dat affair it bodder me an Im not slip very well for couple wik.

Ma wife Glorianna she have lot de fun wit me on de subjec de airplane an she laff wen Im mention it but it are no matter for de laff, special after ma experience las Sunday.

Las Sunday Im get up early for go on de church an have put may bes close, for Glorianna are gone wit me. De course Glorianna are not ready so soon like me for she not be long enuff marry for not take interes on her person, so Im seat mesef on nice beeg chair wat are stop on de gallerie on de front our house.

Mebbe you not know dat but Im got one de bes house on dis part de contree. It are build wit de stone an Im get her from ma ole Fadder wen he sell de res de lan on de Boss for her mill.

We have few apple tree on front de house an one place have piece nice flat ground for play de "croquet" wit de visite wen dey come on our place.

Well; Im seat mesef on dat chair an Im fine it very comfortable too for it have beeg shipskin over it an Im begin tink on dat airplane proposition.

Good Place For Kip Ma Plane

You mebee wonder for why Im bodder mesef wit such ting but dats easy answer. Im be "fire ranger" for die part de contree an Im spen mos ma time on de bush each summer.

Dis sort de work not spoil me for make de log on de winter for it give me good chance to see de good tree, an place for make good road each winter. De Govermin she hire me but de Boss he pay ma wage.

Dis make explanations de ma reason for tink on de airplane for Im expec mos any tam get one dose machine from Monsieur Gouin, wit leetle book for tel how shes go.

Im look on dat piete groun wat are for play de "croquet" an Im tink it make good place for kip ma plane wen Im not use it, an den Im make de plan for "hangar" for place her wen it rain.

Jus bout de tam Im get plan for hangar wit door on each end Im hear fonny soun not far away.

Im tink one dose labor wat are make de beeg pay on de mill, have invés some hees monee on motor boat an have place it on de lac but de soun not come from dat direction. It are more like it are high on de air an Im look up an dere she are—one dose beeg airplane.

She come along jus like one does dev needle bog wat are catch de fly on de summer.

Ba Gosh; shes look pretty, but shes not look strong enough on ma eye for make me tink it carry Caspar Lamarche wat are weight more as two hunder poun.

Dere are feller on board wat are wave hees han on me an den he begin make de circle on de air an soon shes lan on ma croquet place.

Im go down for shake de han dat mans wat Im never see before an Im aks her on de house, but he say he not have time for visit an dat he have message for me from de Govermin.

Say; Dats make me feel fonny on ma stomach wat are empty too for we not eat before go on de Church, but Im ope dat lettre and read wat are say on her.

Im Asks Her Wat Shes Do Fir

He say dis feller are deliver me ma airplane an he are gone give me few lesson before go away an give lesson on nodder mans, an it asks me take ma lesson without make de delay.

Im asks dat feller give me chance for go on de Church, for Im begin tink Im have neglec ma duty leetle bit too much, special wen Im not sure Im gone arrive safe on ma home after make one trip wit her but he say he not take long dat he bring me back on time for 10 o'clock.

Well; Im fine wen de Govermin say you do one ting, dats bes for do it without make de fuss, so Im asks her what shes do firs.

Dat feller he show me roun dat machine an he show me lot de instrument an den he shaw me hows she start. He say Im put on nodder coat and cap wat he are han me an den he show me ma place on de cabin near her side. Den he say Im twis her screw for make de start an Im on dat but shes nearly catch me with one her claw. She make me tink de Mercedes an Im begin call her Mercedes on ma mine.

After Im place mesef on de cabin an have tie leetle strap roun ma wais which are plentee small now becaus ma inside have all rise on ma shoulder, dat feller let her go.

De firs motion are not so bad for we run on de groun for piece but wen she make couple jomp an not return on de groun after de las jomp, Im close ma eye. De las ting Im notis for leetle wile are wen we pass over de stable an ma Jersey cow are try race wit her calf on de back pasture, de bot hole dere tail on de air an wave it on us.

Dat feller are so busy move de instrument he not say nottin for minute but after wile he say "hole tight, Im gone do few trick" so Im do ma possible for kip de tight hole but it are hard job.

Wen he are busy do de trick Im look over de side an den Im close ma eye queek for we are more as one mile high.

Im begin tink how Glorianna are look wen she are dress in black, an de neighbor come on her house for cry wit her an tel her wat a good mans were Caspar, an asks her have he leave much insure.

Jus bout de time Im cry for mesef dat feller make queek turn an we are fly on our back. I look up an Im see de lac an de village, on de sky.

Dats plenty for me an Im asks her return on ma house but he say he not finish wit de lesson an he head her straight on de groun an ma inside fly on nodder end agen.

He try so many trick Im lose track of mesef an ma inside do jus wat dey-like de bes, so wen he say he are gone make de "pancake" dats wat happen for me.

Ma Inside Fly on Nodder end Agen

We are have gone one awful tam an he show me how fine de fire an how Im gone put her out an lots de nodder ting but Im not pay much tenshun on wat he say for Im have plentee troub mesef.

Bime bye he tel me take de steerwheel an we go home an wen he have head for ma house Im take de wheel.

Wen we arrive near ma house he say we gone make nodder "pancake" for lan but Im tink one pancake are nuff for one trip an Im try an go down straight. We go down alright but Im not able to make de queek stop an jus wen Im prepare mesef for break beeg hole on ma house wit ma face, Im hear de voice ma wife Glorianna, an she say, "Caspar, you Ole Fool. For why you make de bad temper like dat, just becaus Im kip you wait few minute?"

You never see somebody more glad as me wen Im here Glorianna say dose word, for Im expec Im be kill an have jomp on de gallerie "plein vente" like we say on French.

Im ope ma eye an wen Im see her stan dere like one angel, Im jomp ma feet an give her one beeg kiss on his mout. Den Im excuse mesef an go on de house for change de collar wat are bus, an few nodder ting.

Dere are ole pine tree on de back ma house an one dose "pic de bois" woodpecker you call her are look for his breakfas on it and are make noise like wat Im tink are airplane, but it have bad effec for me sponse it are only dream.

Im have one satisfy anyway. Im gone quit de read bout dose air patrolle beezness for Im fine it are bad for nodderstan leetle bit and not nuff bout her. Nooder ting wat are give me pleasure are dere gone be only two dose machine try dis summer an de feller wat run her are gone be custom make dose "pancake" drop, an dis are mos important.

Bien a vous,

Caspar Lamarche

LINK-BELT FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed" we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show a few types. Our Catalog shows many others. Send for a copy.

Review of Current Trade Conditions

Ontario and the East

The general tone of the lumber business has been improving steadily, and shipments across the border have been growing larger all the while. Building is imparting activity to the local demand, and there have been brisk requisitions for hemlock and spruce. The new stocks of this season's cut are beginning to come on the market, and none too soon, for dry lumber has been growing scarce.

There is every indication that prices will go higher and quotations on all lines are very firm. Much progress is being made in the house building plans under the government housing act and a fuller reference to the development along this line is made in another column. Costs of manufacturing are advancing all the while and preparations will soon be made for sending men to the bush for the coming season. There is every likelihood that the cut during the fall months will be considerably larger than any year since the outbreak of the war. Every week new concerns are being organized in the lumber business to undertake operations and manufacturing conditions are good. There have been very few labor troubles at any of the saw mills, and stocks are being gotten out in good shape. One large Ontario concern states that during the past month they shipped more lumber than any year since they have been in business. Predictions are being freely made that there will be a decided scarcity in certain lines before many weeks advance. There have been several large sales closed for this season's cuts at augmented figures over 1918, and prices in the East have taken another jump.

The cost of boarding men in the camps will this winter be heavier than ever and wages still show no signs of dropping, all of which means added expense in getting out the logs. The situation in the west has greatly improved and a brisk demand is springing up from the prairies. The B. C. mills, which were closed down owing to labor disturbances and strikes, have resumed operations. Some of the plants are now operating night and day to catch up. Loggers have made another advance in prices, and quotations for Coast forest products have been aviating all the while. The increases in the past two months have averaged about twenty-five per cent., and since the outbreak of the war the figures on most lines have shown raises well on to one hundred per cent. Certain lines on which the mills have an abundance of stock are being sold in the east, and there is a fair demand for timbers. Shingles from British Columbia are still a scarce article, but a few carloads are coming through. Prices keep soaring. Lath are more plentiful than they were some time ago, and the market is strong.

The hardwood situation is staunch and birch and oak are in active requisition with prices stiffening all the while. What has added to the gravity of the situation in the east during the past few days have been the menacing forest fires. Fortunately for limit holders the rain came in time to avert a repetition of the scourge of two or three years ago. In the east a number of sawmills have been destroyed and this is not good news at a time when all the lumber in the country will be needed. The export situation improves, but slowly, owing to high rates of carriage.

Referring to the export problem, a recent despatch from London, Eng., says:

A prediction made that the Ministry of Shipping would shortly commandeer more shipping space, which is so urgently required for Canadian trade, has been soon realized. The reality is a little worse than was anticipated, however. During July the Ministry will require seventy per cent. of all cargo space, and in August and September this will be increased, leaving practically no room for ordinary commercial shipments.

This space will be required largely for the shipment of timber and bacon bought in Canada. It includes 75,000,000 tons per month of bacon. A strong protest has been addressed to the Ministry of Shipping by the Canadian Trade Mission, and the request has been made that a proportion of the tonnage now arranged to go to the United States ports be transferred to Canadian routes. It was recently discovered that some of this commandeered space was being used for the shipment of scrap iron ordered in Canada by the Ministry of Munitions and unsaleable there at a sufficiently high price to Britain. Complaint was made and this has accordingly been discontinued.

It has been reported that some very extensive sales have been made by leading lumber companies during the past few days. One mill in Northern Ontario is reported to have sold its output of white

pine merchantable at a top notch figure to a leading Michigan firm. It was an exceptionally high price and would indicate that values are increasing all the time. It is understood that the R. Laidlaw Lumber Co. of Toronto has purchased ten million feet from Manley Chew, Midland, Ont., consisting of white and Norway pine, hemlock and spruce. It is understood that about three-quarters of the output consists of white pine.

Gum has now gone so high in price that Canadian birch is a strong competitor with it and several heavy sales are taking place in the latter wood.

The Toronto Housing Commission announces that 200 applications have been received to date from those desirous of getting homes under the ruling of the commission. Land has been purchased and erections planned for a number which will exceed the applications. According to Manager Swaine a large number of inquiries are being received in this connection at the Temple Building offices.

Mr. W. M. Neal, of the Canadian Railway War Board, in respect to the loading of cars, states as follows:

"I might add from now on the car situation will become more acute, and the shortage will probably reach the extreme point about the middle of next fall. Any situation along these lines which may come about will be ameliorated if all concerned will continue the policy of placing the maximum load in each car."

United States

So far as supply and demand are concerned there is not much change in the general situation. Many mills are unable to meet requisitions and stocks are low. Word comes from hardwood dealers across the line that there has been a further advance of from two to eight dollars, and some think that the top has almost been reached. The new stocks are beginning to come forward and will dry out rapidly during the summer months. Northern pine operators lately advanced their prices and the increase on selects ranges from two to five dollars per thousand. In some instances, orders have had to be declined as the mills have all the business they can turn out. Southern pine prices continue strong with an advancing tendency.

The upward trend continues in hardwoods and the best grades are commanding the highest quotations ever known.

The largest supplies are held by the manufacturers of birch, but the stocks of birch in the hands of jobbers have been pretty well cleaned out. The furniture manufacturers are the best customers of the birch owners. Ash has been picking up of late, due to a large demand from the refrigerator manufacturers for the softer quality and an increased demand from the makers of automobiles for the tougher kinds of this wood. Prices have been going up with the demand. Short supplies of all hardwoods at southern mills, and particularly of oak, have sent quotations on this wood to unheard of heights. Buyers are bidding for the stock that is to be had, and there seems no limit, but the sky. Manufacturing conditions in the south have been so bad for the past six months that the cut has been way below normal, and there is no telling when the mills will be able to approach normal activity.

The call for hemlock is particularly brisk in view of so much home construction. The revival of building in the East is progressing rapidly and thus the hemlock producers are particularly favored in being near an eager market and one that it is impossible to satisfy at present. Eastern buyers continue to take a great deal of interest in hemlock from the North and are also paying attention to the Pacific coast stocks of this wood. Prices are very firm and stocks in the hands of manufacturers are small, especially of lumber that is in shipping condition.

Lath show a steady increase from week to week and supplies in the hands of manufacturers are really getting badly reduced. Lath prices advanced this week in many sections, the advances ranging from 25 cents to 50 cents a thousand. The red cedar shingle market has been a little steadier this week and with the close of the mills resulting from the Fourth of July celebration the market is sure to remain firm, as the demand for shingles has not decreased. The supply of cedar logs at the mills is not large and most of the producers have more orders than they can fill, and with the restricted output of the next two or three weeks the demand is very apt to cause an increase in the market. The demand for cypress shingles continues in excess of the supply and thus very good prices are obtained. With the growing scarcity of cypress and red cedar shingles

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

the interest of retailers in redwood, white cedar and pine shingles increases and sales naturally show a corresponding increase.

The sash and door business, from the standpoint of the producer and wholesale distributor, is very satisfactory even when compared with pre-war conditions. This applies to the amount of orders on hand, trade that is being proffered and future prospects. In every commercial and industrial centre there is a pronounced scarcity of quarters in which to house the people. Rents have advanced radically, which has encouraged capital to make investments. Flats and apartment buildings are being constructed in very much larger proportions than ever before. In the country most every farmer has ready money, and with the assurance of abundant yields and higher prices for his product, the granger is disposed to be a liberal buyer. The up-to-date dealer is taking advantage of this situation to sell the farmer a new home, barn or other structure before the automobile salesman and distributor of luxuries gets all the farmers' cash. The demand in the cities is calling for a large amount of special woodwork. In some cases the contractors have to suspend operations to wait until they get this special material.

Great Britain

With the signing of Peace Treaty there is a general feeling of relief and business will now go on actively in all lines. There is a good opening in the Old Country just now for Canadian woodenware. A leading firm, in writing the "Canada Lumberman" says: "We were large importers in this line before the war, but unfortunately we found it necessary to get our supplies from Scandinavian and American firms, although we have done considerable business with Canadian manufacturers. We realize the fact that Canadian produce articles to compete with foreign countries, and we see no reason whatever why we should not get all our supplies from Canada alone. We hope soon to arrange contracts with firms with whom we have previously dealt, and also interest other manufacturers in the lines we wish to import. There is undoubtedly at the present time a fine opportunity for Canadian manufacturers to supply the British market if they will only specialize in the export trade."

Speaking of transportation an English exchange says:

Some may naturally ask why it is we do not anticipate a big trade this year, considering that the construction must increase as Europe becomes more settled, and as our men in this country get back into their old employment. There are, it is argued, plenty of goods in Canada, Finland and Sweden, and if the demand in the importing countries increases, as all anticipate it will, why should we not also anticipate a large consumption of timber during the current shipping season. To those importers who have carefully studied the position the answer is only too obvious. There will not be sufficient tonnage available to bring over the wood. It is not even a question of rates. In all quarters, and in all trades, the same cry for more shipping is heard, and important as wood is for national

developments, food and other raw materials are sometimes more so; and, what is more to the point, nearly all other commodities can afford to pay higher freights. Timber importers and merchants should, therefore, make up their minds that, however favorably the labor and national situation develops, timber will be short in supply. There could have been no more powerful influence over the shipping of wood than that of the Timber Controller and of the Government Buyer, and yet these two officials, even with the help of the Ministry of Shipping, have not been altogether successful. We hear of firms among those who left the chartering of their goods in the hands of the Government Timber Buyer, who have not yet been allocated tonnage for more than a proportion of their f.o.w. contracts.

Regarding Canadian goods, there is no change of note. Freights continue very high, and the Government buyer is allocated the bulk of the space. The situation depends almost entirely on what arrangements will be made for disposal of the very large purchases of Canadian timber made by the Government. The market could do with shipments of birch lumber and logs, as there is no large supplies of these woods in store. Pine deals and sidings are also urgently needed, as the modest shipments that have already arrived came in on a practically bare market and went into consumption direct. There has been a fair demand for Oregon pine in fair widths, in the absence of other woods that might have been preferred if available.

Although there is an urgent need for at least 300,000 new houses in Great Britain, no big start has been made in building them. The high cost of building materials is considered to be the chief deterrent to the revival of the building trade. At an interview recently granted to a representative of the London Times the Minister of Supply indicated that ample supplies of building materials, except slates, are available for all local housing schemes as they develop, and that when allowance has been made for the probable requirements of the Government housing authorities there will still be adequate supplies for private builders.

The government stocks of timber are now about 140,000 standards (28,000,000 board feet.) Some 117,000 standards have been bought in the Baltic and White Sea regions and will be delivered very soon. Another 200,000 standards of European timber have been purchased for delivery later in the year. A further 250,000 standards of Canadian timber have been bought and a number of ships have been allocated for their shipment.

Transport difficulties are considered to be second only to high prices as an obstacle to the resumption of building operations. About 40,000 freight cars, which were taken from the British railways, are in northern France and Belgium, and it is believed doubtful if they will ever be brought back. Because of the high cost, the private builder can not, without aid, build houses of a class that formerly rented for about \$200 a year that could now profitably be let at less than about \$450. The greater part of the work will, therefore, probably be done with the assistance of government housing authorities.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

St. John Shipments Are Moving More Freely

A much better tone has come over the lumber market at St. John during the past two weeks; large shipments are moving forward both by steamer, but largely by sailing vessels. One large five masted schooner now loading here will carry away 2½ million feet, other small vessels are also loading, practically all water shipments being for United Kingdom parts and chiefly British government orders. Largely all of the stock being shipped is coming from rotary mills from the interior of the province. The mills at St. John are not being used to supply cargoes to amount to anything, but nevertheless it has its effect and will be felt later on as it clears up stocks in the interior of the country.

One great factor in the better tone here is the buying for the American market at good prices and every day sees an improvement in these American prices; if it were possible to purchase larger quantities the American market would certainly take much more stock but as the British government had bought up practically all the mills' cuts here very little remains to be offered to United States and it looks very much as if the buyers must go short of their requirements.

Prices are well maintained 2 x 3-4-5-6 being quoted at \$40.00 on cars; 2 x 8 at \$42.50; 2 x 9-10 \$45 and \$47 on cars here—net cash. Refuse stocks are being bought at around \$27 on cars and stocks of these grades will also be much depleted before long. Pine lumber also remains very firm, anything in pine bringing around \$40 on cars,

or in some cases, as the British government and foreign buyers are purchasing all they can find. It appears as if there would be a large shortage of pine. Laths have taken a jump and are scarce at \$3.50 on wharf at St. John. Shingles are also very scarce and are selling extras \$5.50; clears \$5.75; 2nd clears \$4.75; Ex. No. 1 \$3.25 city delivery.

Logs are coming forward out of the booms as rapidly as possible and all mills at St. John are running full time.

Ottawa Business is Looming Up Encouragingly

"Getting better all the time," describes the situation as regarding the Ottawa market during the opening period of July. Trading, sales, and orders continued to increase over even the exceptionally good period during the last two weeks of June.

The entire general outlook during the last fortnight underwent a considerable alteration for the better. The market, while largely pine, when judged as to sales, orders, and inquiries from the United States also showed an increased demand for spruce stocks.

United States business was the principal factor to govern the increase in the volume of trade done. Ottawa wholesalers and manufacturers all reported an increased volume. The wholesalers, if anything, increased their purchases in certain grades from the manufacturers, buying this year's saw cut.

One of the best informed lumbermen in the Ottawa Valley stated that the possibilities of the present outlook was little short of

Advertising is Business Insurance

A large manufacturer who, during the war, devoted his entire plant to war-work, kept his advertising running continuously, although he could not fill a single order. When asked why he did it, he said that he was insuring a market for his product when he returned to his regular lines. He has since reverted to his pre-war products and his plant is running to full capacity with more business in sight than he can handle.

Advertising was business insurance for him.

"wonderful." The basis back of this assertion was that the saw-cut of the Ottawa Valley mills, this year, was going to be considerably below that of last season. The cost of production from the camp end had risen, and for next year's operations would likely be higher.

A suggestion was made by those outside of the trade that the increased buying in the United States might, in a measure, be attributed to the securing of a large contract by Americans for the rebuilding of Nancy and other devastated cities in France. It is, at the time of writing, impossible to definitely state whether the lumber now being purchased in the Ottawa Valley for export to the U. S. is eventually going to land in France or not.

Factory labor conditions as between mill hands and employers continue to hang fire. No move by either side was definitely made up to July 9th. Thus the acceptance or rejection of the principle of collective bargaining remained in abeyance.

Sash and door remained about the same. Lath and shingle showed more activity. Building trades showed some strengthening.

Domestic business showed improvement. Prices indicated a general advance. Western lumber, it was reported from Eastern sources, had showed a recent jump of from \$3 to \$4 per M. This season's wood operations are expected to be thirty-three and one-third per cent. over the season of 1918-1.

Montreal Finds Conditions Getting Better

A still further improvement in business in Montreal is to be reported. As noted in the last notes, the chief increase is in trade with the United States. The building trade in the Eastern States is brisk; and Canadian firms are feeling the benefit of this revival.

Prices rule high, and the outlook is for a continuance of this condition. The general idea is that we may expect still stiffer quotations, having regard to the upward tendency of most commodities and of labor. "In my opinion," said a local wholesaler, "we may look for a lumber famine in October or September. Spruce is getting scarcer every day, and with the large amount taken off the market by the British government and the good buying of the Americans, there is certain to be a shortage. Under these circumstances prices are bound to advance." Lath is an exceptionally strong market, with a good demand. B. C. stock is also firm.

Local trade is better. A fair amount of building work is coming out, and there are also reports that other jobs of a good size will soon be let. The building permits continue to improve. Last month the total was \$731,417, an increase of \$433,857, as compared with 1918; for the half year the total was \$2,887,424 a gain of \$847,859. This was in spite of the labor unrest, which is holding up a certain amount of work.

Reports from the province indicate that building is satisfactory, and that lumber dealers are doing a fair business. The housing problem, however, is still serious, and in Montreal practically no progress has been made with the municipal scheme.

The Canadian War Board has issued a notice to the effect that there is likely to be a car shortage next month, and asking that cars be filled to capacity, so as to relieve the situation.

A very large amount of lumber is being shipped to the United Kingdom for the government from this port, Quebec, and Three Rivers, the commercial consignments being restricted. The goods are being shipped by liners and by tramp boats. It is expected that the bulk of the Eastern purchases for the government will be sent by October. There is an increasing demand for space for all kinds of commodities, and certain criticisms have been made as to the intention of the Ministry of Shipping to commandeer additional space. principally, it is stated, for the shipment of lumber and bacon.

Enterprising Lumber Company Issues Paper

The Long-Bell Lumber Co., Kansas City, Mo., have begun the publication of the "Long-Bell Bulletin," a miniature newspaper for retail lumbermen. The reading matter is bright, timely and interesting. This is another advanced step in the service department of this progressive organization, which has for a long time been conducting a national advertising campaign on behalf of retail dealers who sell Long-Bell products. The company believe in co-operating with the dealer in making sales to the consumer. The "Bulletin" appears under the editorial direction of Paul E. Kendall, the aggressive, advertising manager of the company, who announces that the publication is more than a newspaper, for it will help create and maintain friendly relations with the company's customers. The "Bulletin" will be issued once a month and will be a medium for the exchange of ideas on trade-marked lumber and northern merchandising methods.

Forest fires in various sections of Newfoundland destroyed valuable timber tracts and threatened isolated settlements. Later reports received indicate that rain storms have extinguished most of the fires.

Sir James Ball Scores Profiteers

Says If Yellow Pine Dealers Continue to Charge Excessive Prices the Government Will Get Busy

Sir James Ball, London, Eng.

Sir James Ball, British Timber Controller, who recently visited Canada, has returned to England, and has just retired from the position which he so ably and impartially filled during the war. He resumed his railway duties on July 1st. In his intercourse and interviews with the lumbermen in all parts of the Dominion, Sir James made many friends in the industry who will read with interest the subjoined statements from the press of Great Britain.

The "Timber News" says Sir James made the acquaintance of many trade organizations and the principal exporters in the districts covered. We understand that Sir James has made arrangements for supplies of British Columbia fir and spruce, the former (largely sleepers), coming from the West, and the latter from the East Coast.

Transport has already been arranged for at favorable rates.

In an interview which Sir James Ball accorded the press on June 27, he announced that his position as Controller of Timber Supplies will terminate at the end of the month, and he will resume his railway duties on July 1. He said that during his visit to British Columbia he had been struck with the potentialities of Douglas fir, of which he believed we should see far larger stocks in this country during the year than ever before. His associations with the trade, despite little differences which soon yielded to treatment, had been most cordial, and, as a whole, he had been loyally assisted in his work. He expressed the hope that the trade would now be loyal to itself, and set its face against the profiteering instincts of a few who, if left to themselves, would put up prices unduly. Should this continue the Government will not hesitate to step into the breach, and sell to the consumer direct.

It may be recalled at this moment that Sir James Ball, then Mr. Ball, was appointed Controller of Timber Supplies on Whit Saturday, 1917, in succession to Sir Bampfylde Fuller, K.C.I.E. Though none will pretend to regret the passing of control, all who know Sir James and his work will recognize that he has acquitted himself well, and will take with him into his retirement the best wishes for his future of those with whom he has come in contact.

Is Canada Barred in The Timber Trade?

Despite the urgent need of timber for the huge house building program of the Government and municipalities here, Canadians see little chance of supplying the market in competition with the Scandinavians, says a recent press despatch from London, Eng. The chief difficulty is shipping. Before the war Canadian rates were nearly double those from lower Scandinavia. To-day they are almost trebled, thus helping the Scandinavian intention to control the British market, especially now the large Russian competition is quiescent.

A. C. Manbert, Ontario Timber Commissioner, says that until the British Government's economic policy is announced and Government stocks of timber are distributed, individual purchases from Canada or elsewhere are bound to be deferred, moreover the present freights make all private timber importation very hazardous unless for a definitely arranged outlet. Canada must devise some means of controlling transportation as well as producing wares. It is incongruous to expect Canada to compete successfully with Sweden and Norway in timber products and at the same time to look to these countries for a large proportion of the bottoms to carry Canadian goods.

The huge building program now being formulated in all parts of Britain needs large supplies of white pine. The quality of Ontario's product is well recognized, but the price bears a prominent part in the introductory stages of any extension of its use here. Everything says Mr. Manbert, depends on the shipping facilities and the prices announced. French and British timber merchants together agreed to put the demands of practically all importers of Baltic timber in England and France into the hands of a central chartering bureau at great St. Helens, London City. This alliance is designed to reduce freights and encourage Baltic trade.

James Davidson's Sons, Ottawa, recently shipped to France one of their cut houses consisting of two rooms and a shed.

The sawmill of James McBrayne in Firstbrook Township and 7,000 feet of lumber were destroyed in the recent forest fires near Haileybury.

A fire occurred in the planing mill of Jacob Kauffman, Limited, Kitchener, Ont. The blaze was extinguished promptly, the loss being very slight.

The Union Navigation Co., Limited, Montreal, has been incorporated to build, equip and furnish vessels and boats of all descriptions. Capital \$50,000.

Duncan Graham, of Renfrew, and P. Shannon, of Booth & Shannon, Biscotasing, Ont., have bought the old Milne mill at Brennan Harbor and are operating the same this season.

The Canadian Barking Drum Company has just received a contract for another American barking drum for the Lake Superior Paper Co., making the sixteenth drum for this concern.

The Dickson Co., Limited, of Peterboro, have been receiving tenders for their old sawmill, which is located on the east bank of the river at Lakefield. The structure will be dismantled.

The Lang Mfg. Co., Limited, Guelph, Ont., has been incorporated to manufacture and deal in wood, iron and steel and all products which these materials enter into. Capital \$40,000.

The National Standard Co. of Canada, Ltd., Guelph, Ont., have been incorporated to manufacture and deal in any article made in whole, or in part, from wood, glass or fabric. Capital \$30,000.

It is learned that the order for "knock down" houses which the Canadian Timber Products Association was to receive some months ago from the French government, did not materialize, the high ocean freight rates killing the business.

A fatal accident was narrowly averted in the plant of Austin & Roberts, Haliburton, Ont. The night watchman while attempting to put a belt on the saw-dust carrier became entangled in the shaft, his clothes were all torn off and one arm was twisted out of joint, but, fortunately, by this time the machinery had stopped. Other employees hearing him call came and quickly released him from his predicament.

The Allied Aeroplanes, Limited, Brantford, Ont., have been incorporated to manufacture and deal in aeroplanes on a commercial scale; also to manufacture and deal in automobiles, trucks and other vehicles. Capital \$40,000. It is the intention of the company to run an aerial jitney and two machines will be put into service at an early date. Lieut. G. Russell, late of the Royal Air Force, has been appointed official pilot.

Information from the Abitibi Power and Paper Co., of Iroquois Falls, leads to the belief that this year's business will stand well ahead of last year's, a condition that will have an important bearing on the payment of the arrears on the preferred, dating back to April 1, 1915. As the preferred stock amounts to only \$1,000,000, this would not be a heavy tax on the company. The whole output of the paper mills is sold for the present year.

The Canadian Soo Lumber Co., Limited, has been incorporated with a capital stock of \$500,000 and head offices in Sault Ste. Marie, Ont. The company is empowered to buy, sell and operate timber lands and to manufacture and deal in lumber, timber and all and sundry wood articles. Among the incorporators are William Herman Rath and Peter P. DuKet, lumberman, of Chicago, and Geo. A. A. Allen and James McEwan, of Sault Ste. Marie, Ont.

The total number of municipalities which have come under the Ontario Housing Act now amounts to 74. This number included 17 cities, 35 towns, 14 villages and 10 townships. Actual construction operations are at present being carried on by 40 of these municipalities. Mr. J. A. Ellis, the Provincial Director has approved over 1200 plans and the houses in the course of construction exceed 400. Nine travelling inspectors were recently appointed to visit the various municipalities that are conducting building operations; out of the nine men appointed, seven were returned soldiers.

A provincial charter has been granted the Kingston Road Lumber Company, Limited, with a capital stock of \$150,000 and headquarters at Toronto. The provisional directors are W. M. Miskelly, F. J. Cummings and Jas. G. Shaw. The new organization has taken over the stock, plant and business formerly conducted by the W. C. Charters Lumber Company, at 828 Kingston Road. Mr. Miskelly is the manager of the Kingston Road Lumber Company, while the manufacturing end is being looked after by Mr. Cummings, who has been in the building and lumber line of the Queen City for a score or more of years.

In recent fires which did considerable damage in Northern Ontario the residents of Cochrane had a bad scare for a few days. The muskeg south of the town ignited and was fanned along by a high wind until it assumed a dangerous aspect. The whole town turned out and, assisted by the fire brigade, soon had the flames under control. Several settlers' shacks at Lamarche went up in smoke. Many logs belonging to K. Belick on the Frederick-house River were consumed. The flames also crossed the boundary line into Quebec and around LaReine and Lasarre considerable destruction of property ensued. A conservative estimate places the loss of pulpwood at these places at 7000 acres.

Eastern Canada

Poissen & Frere, Chartierville, Que., registered recently as lumber dealers.

The F. R. Seale Lumber Co., Limited, were recently registered at Quebec.

The partnership known as the National Timber Co., Quebec, has been dissolved.

About 300 acres of N. B. crown lands have been burned over by the forest fire which has been raging on crown lands in the vicinity of Wapske, a lumber-

ing centre in Victoria county on the National Transcontinental Railway. The damage is said to be approximately \$25,000.

Wm. Copping Lumber Co., Limited, Joliette, Qu., were recently granted a charter.

F. W. Duncan, 1801 Ontario St., Montreal, is contemplating the erection of a saw and planing mill.

The Allen Lumber Co., of Waterloo, Que., was registered recently. George E. Allen is the proprietor.

J. and W. Duncan, lumber manufacturers and wholesalers, are erecting a sawmill at Beaufort St., Montreal.

The plant and planing mill of the Tobique Lumber Co., Limited, Eel River Crossing, N. B., were destroyed by fire.

The plant and planing mill of the Richards Mfg. Co., Limited, Whites Brook, N. B., were completely destroyed by fire.

T. A. Morrison & Co., Montreal, has been incorporated to manufacture and deal in building material of all kinds. Capital \$10,000.

The plant of L. B. Amos, Doaktown, N. B., woodworker and contractor, was recently destroyed by fire. The loss was partially covered by insurance.

Geo. C. Goodfellow, 511 St. Catharine St. W., Montreal, has let a contract for a two storey frame construction building 60 x 61 ft., to be used as a sawmill.

Riverside Realty Co., Limited, Sherbrooke, Que., have been incorporated to do business as builders and contractors and to deal in lumber and other building material. Capital \$49,000.

A large number of fires have occurred in the province of Quebec, particularly in the Saguenay district, and the fire protective associations have been very busy in preventing their spreading.

Legara Automobiles, of Sorel, Limited, have been incorporated to manufacture and deal in automobiles, motor trucks, carriages, furniture, woodenware and musical instruments. Capital \$100,000.

LaReine Lumber Co., Limited, Quebec City, have been incorporated to manufacture and deal in lumber, timber, pulp and wood products of all kinds and to take over as a going concern the manufacturing business known as Welford, Laliberte & Frere, St. Remi, P. Q.; capital \$49,000.

La Compagnie de Pulpe du Chicoutimi have been granted supplementary letters patent to increase the preference stock of the company from the sum of \$2,500,000 to \$3,000,000. The new stock to be divided into shares of \$100 each and decreasing the common stock of said company from the sum of \$900,000 to \$400,000.

At a meeting of the Saguenay Pulp & Paper Company, held last week, Hon. F. L. Beique, Hon. J. Marcellin Wilson and Hon. Nemese Garneau, and Edward C. Pratt, Louis Chable, J. E. A. Dubuc, Joseph Quintal, R. A. Hammond and John T. Steel, were elected members of the board of directors. Senator Beique was named president and Hon. N. Garneau, vice-president.

Doheny, Quinlan & Robertson, Limited, Montreal, have recently been incorporated. Among the powers conferred on this company are to manufacture and deal in timber, lumber and all manufactures of wood and to acquire or build ships, barges, tugs, and other vessels. The incorporators are H. Doheny, H. Quinlan and A. W. Robertson, contractors; G. A. Campbell and J. Kerry, all of Montreal; capital \$2,000,000.

Gates Refractories, Limited, Montreal, has been formed to take over the business of John W. Gates. The company have acquired a factory at Montreal East, where they manufacture Gates' patent boiler furnace lining blocks and special shapes in refractories. The company are also engineering contractors, specializing in furnace building. The capital is \$250,000. Mr. John W. Gates is the president, Mr. E. T. Jeffrey, vice-president, and Mr. L. G. Black, secretary.

Western Canada

A fire recently occurred in the plant of the Victoria Lumber & Mfg. Co., Chemainus, B. C. Fortunately the blaze was extinguished before any serious damage had been done.

The Fillmore Building Co., Limited, Fillmore, Sask., has been incorporated with a capital of \$10,000, to carry on a building and contracting business and to manufacture and deal in building supplies.

The Alberta Pioneer Canning Co., Limited, Edson, Alta., was recently incorporated. Among the powers conferred by the charter is to manufacture barrels, boxes, kegs and other forms of packages, whether of wood or other materials. The capital stock is \$40,000.

Sidney Mills, Limited, Sidney, B. C., have found it necessary to install additional equipment in their box factory. The new machines consist of a 6-in. Mershon band resaw; an automatic tumbler saw for cut-off saw and a circular rip saw for the sizing of box lumber.

A provincial charter has been granted to the Lount Engineering Co., Limited, with a capital stock of \$60,000 and headquarters in Winnipeg. The new organization will take over the business of Chas. T. Lount and among other powers is authorized to carry on the business of acquiring and holding timber limits, timber licenses and timber lands and to engage in the cutting and manufacture of lumber and, generally, carry on a saw mill, planing mill and other lines.

The Great West Lumber Mills, Limited, have been granted a provincial charter with headquarters in Winnipeg and a capital stock of \$100,000. Among the incorporators are Wm. P. Dutton and Geo. U. Bacon, lumbermen; John W. Brown, traveller and others. The company are empowered to carry on the general business of lumber and timber merchants, sawmill proprietors and timber drawers, and buy, sell and deal in all articles in the manufacture of which timber or wood is used.

In order to keep pace with the growing demand for their products the Robertson Hackett Saw Mills, Limited, Vancouver, B.C., are constructing a new planing mill, 100 x 100 ft. The building will be one story in height with what is known as a truss roof. The construction of this roof will be such that its weight will be supported by 4 posts leaving a 56 ft. span in the centre of the mill where the machinery will be located. The equipment will consist of 5 planers and matchers; 2 rip saws and a band resaw for bevel siding. Individual electric drive will be used throughout. Last year this firm constructed a 40 x 120 ft. north coast dry kiln.

Nature Gave the Flavor You Enjoy in Klim

Immediately you taste Klim your palate notifies you that "it has exactly the same flavor as fresh separated milk." You wonder "how they produce this taste." The truth is we don't—Nature does. The unmistakable fresh separated milk taste is in Klim because it was in the new clean milk that came to one of our five plants from a nearby farm. The "Spray" process which we use to remove the water from this separated milk does nothing else. It simply puts it in condition to travel long distances and to keep indefinitely without refrigeration. It does not alter the flavor or lessen the food value. So when you whip Klim into water you merely restore the milk solids to their original liquid state.

Klim tastes genuine because it is genuine.

It is the only form in which you can get this natural flavored separated milk for your camp. Klim is a dry powder that will not spoil and will not freeze in coldest weather. It occupies only a fraction of the space of any other form of milk, is cheaper, more convenient to use, and permits your having a whole season's supply brought into camp in one shipment.

Use Klim regularly in the cook house. It improves the flavor and food value of cooked and baked foods, tea, coffee and cocoa, and may be used as a drink. Your men will enjoy Klim, and you'll be money in pocket.

10 lb. tins for camp use — 6 tins to a case

1 lb. tins for home use — 24 tins to a case

At all wholesale and retail grocers.

Try a tin in your home. You will quickly recognize its value for your camps.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

—IN—

**Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.**

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You *pay* for Chapman bearings
whether you *buy* them or not**

**Chapman Double Ball Bearing
Co., Ltd.**

**British
Columbia
Red Cedar**

SHINGLES

are made under patent rights taken out by nature.

The secret process whereby Nature stores in the Red Cedar of British Columbia those qualities which make the wood the ideal roofing product of the world have never been discovered by man.

Every other form of roofing seeks to imitate—in appearance—in quality—the results obtained by the use of Red Cedar Shingles.

Like all other imitations of Nature, they fall short—No man-made product—the results of quick manufacture—can approach the slow but sure methods of Nature's laboratory in which the moisture and sunlight of a generation is utilized for the formation of a time and storm defying weatherproof texture and the storage of decay resisting oils—not only on the surface, but permeating the wood through and through.

Nature Roofing is best—and the best type of Nature Roofing is found in the trade marked British Columbia Red Cedar Shingle.

Morgan Machine Company
ROCHESTER, N. Y.

Pendry Balanced Throttle Valve

for operation of locomotive cranes, log loaders, skidders, and all hoisting engines.

Gives operator perfect control of his engine, so essential in loading logs and heavy timbers.

Just the
Thing for

Logging Operators

The Pendry Balanced Throttle Valve is essentially a quick opening valve, perfectly balanced, but it can be opened as slowly and gradually as a screw stem valve and will remain open at any point to which it is set.

Furnished with brass body in sizes from 1/4 inch to 2 1/2 inch and with iron body in sizes from 2 to 5 inches, inclusive.

Prices on Application

Formerly manufactured by the Detroit
Lubricator Company, Detroit, Michigan

Now manufactured by the

Bay City Foundry & Machine Co.
26th and Water Sts. - BAY CITY MICH.

Another
reason
Why
HUTHER
DADO HEADS
are better

Huther Brothers were the inventors of their type of Dado Head and were the first to market it. For over 27 years we have been the leading producers of these saws.

This experience has given us the opportunity to study the problems confronting users of Dado Heads and to manufacture one that will meet all these demands.

Send for free illustrated booklet or order a Dado Head on approval. May be returned at our expense if unsatisfactory.

Gasoline Loaders and Skidders

This illustration shows one of our little ten Horse Power Belt Driven Hoists operated by a single cylinder gasoline engine. This particular machine was run all last winter even when the temperature dropped to 20 below zero. It did its work so well, and at such a great saving in costs over the former methods that the owner is not only well pleased with his investment, but is enthusiastic in its praise.

Though it is so small and easy to move around on the job, this little machine will lift any log up to a ton and a quarter in weight.

We have many other styles and sizes. Let us send you photos and particulars.

GOODHUE BELTING

For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Sault Ste. Marie, Ontario

The Coming Roofing

IN fact, they have already arrived:
In 1917 we doubled our output of Asphalt Slates over 1916, and 1918 was double 1917.

These were war years, remember—when the demand for roofing materials as a whole fell off. The fact that the demand increased so largely during the war period indicates how strongly “the wind is blowing” in favor of

Brantford Asphalt Slates

There is going to be a big and growing business in Asphalt Slates done by lumber yards. We have a number of lumber dealers now who are handling our line and finding it a brisk seller and a good profit earner.

You will find it quite easy to sell this fire-resistant, economical, durable roofing material at the same time you are selling the lumber for the house, barn or other buildings. Brantford Asphalt Slates are permitted to be used in the congested districts of cities where the most rigid fire protection by-laws are in force. This is an advantage that adds greatly to their saleability.

In addition to this, Brantford Asphalt Slates add beauty to a building. They are in soft, harmonious red and green shades—and the crushed slate surface gives a roof a distinct and artistic individuality.

Brantford Asphalt Slates are easily handled and quickly laid. They are in **Individual size** shingles.

Brantford Asphalt Slates Slabs are **four shingles in one**. They are particularly suitable for large roofs, because they save time and labor in laying and require fewer nails. When laid the roof has the same appearance as when covered with the individual asphalt slates.

Brantford Crystal Roofing is the same material in Rolls. It is a big seller for barn roofs.

We suggest that you put in a small stock to try out the line. Lumber dealers who have done so have found that Asphalt Slates do not conflict with their regular business. Instead they have found that being able to supply the Asphalt Slates gets them extra business.

We would like to send you samples, prices and information.

COMBINED Strength and Efficiency

Type V-5 Heavy Duty Resaw

Strength and efficiency is a combination much sought for in machinery. The Yates Type V-5 is a heavy duty resaw of extra strong construction and remarkable efficiency. The base is cast in one piece, heavy and widely flanged. The columns are massive and the feed works powerful. The wheels are accurately balanced and built to last. All adjustments are accurate, readily accessible and easily manipulated.

A postal will bring detailed information

HAMILTON, ONT. CANADA

U. S. PLANT: BELOIT, WISCONSIN

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

WOODSTOCK, N.B.

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.

Pulpwood, 246,282 cords.

Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

48" Heart 3-ply Belt, 86 feet long, installed in 1911 in the mill of the C. A. Smith Lumber Company, Baypoint, Cal. Driving Pulley, 14 feet. 101 R.P.M. Driven Pulley, 4 feet. Belt Speed, 4400 F.P.M.

"Where Little Things are Big"

Think what this belt must do. Traveling at 4400 feet per minute, it makes its circuit fifty times every sixty seconds. For every one of these revolutions, each part of the belt must slacken and tighten itself, practically once a second. To be efficient, it must do this without loosening its grip on the pulleys, without jumping or slipping. That this 48"

Heart Belt does transmit power efficiently is evidenced by the fact that it is delivering 250 more horsepower, or over 40 per cent. in excess of that for which it had been designed. It has been doing this for over 8 years. Heart Brand is one of the Standardized Series Leather Belts—made according to the work to be done.

Manufacturing All Kinds of Special Shapes in Refractories

Remember, we are making all our own blocks and making a specialty of special shapes.

We are using a high grade fire clay, which is the factor of supreme importance in all processes of manufacture. Our burners are experts. When you are in the market be sure and write us as we know you will find our proposition interesting.

Our stoker arches are designed to promote combustion and give longer life.

Our door arches and jambs are made to withstand the

strong-armed boy with the slice bar.

Our side wall blocks are made to eliminate the many joints that clinkers stick to, when ordinary fire brick is used. They give longer life and reduce air leaks to a minimum.

We designed these arches and blocks so that any handy man could replace same in half the time that it takes to repair a standard fire brick job.

Remember, Gates' blocks means cutting your cost of upkeep and fuel bills.

High Temperature Fire Clay for Emergency Repairs.

We specialize in all kinds of POWER PLANT BRICK WORK

Kendall Gang Circular

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me \$1.00 to \$1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

We are the original manufacturers of these machines

We have been manufacturing them for the past thirteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

26-in. saws for 8-in. cants, as illustrated.

32-in. saws for 10-in. cants.

36-in. saws for 12-in. cants.

Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

Waterous Boilers

Are Best for Sawmill Use

To get the full steam value out of the fuel you burn install Waterous Return Tubular Boilers. It will pay you for these reasons:—

They are economical of fuel—they carry plenty of steam in reserve for use in emergencies—they can be used with hard and dirty water—they are easily cleaned and readily taken care of.

Furthermore, we build various styles of boiler settings that are dimensioned and designed to best handle the various fuels used in the sawmill. Whatever kind you use, we will install your boiler to give you the highest possible efficiency and most perfect combustion with it.

We build and carry in stock Return Tubular Boilers up to 72" x 18". If we cannot supply you at once from our yards we can turn out your order in quick time. Ask us for prices on the next boiler you buy.

We build complete Power Plant Equipment for every installation—Catalogs and Prices on request

Limited
Penetang, Ont.

"WELL BOUGHT IS HALF SOLD"

UNIQUE !

This word applies to

OUR

WHITE PINE

Why?

BECAUSE:

Logs—Come from best White Pine section in Ontario.

Manufacture—Unsurpassed. Modern, up-to-the-minute mill equipment insures this.

Grading—Careful, uniform and of sufficiently wide range to give the customer just what he requires.

Have you used our White Pine?

A trial order will convince you that it really does stand in a class by itself.

Eighteen Replies

were received recently to a small advertisement in the Quick Action Section of the "Canada Lumberman and Wood-Worker." At a trifling outlay this advertiser got in touch with eighteen interested parties.

Are you making use of the

QUICK ACTION SECTION ?

Whether a mill, a piece of machinery, an odd lot of lumber, a timber limit, an employer or employee, this department usually gets the right parties, and will get them for you at a minimum cost.

We will gladly give you full particulars if you will write us your requirements.

Lower Your Production Cost

No doubt you, like most concerns in your line, are trying to reduce your production costs. By saving labor the

Huther Bros. Dado Head

will help you do this. It will cut perfect grooves of any width either with or across the grain, and makes the most intricate cutting seem easy.

Will fit any saw mandrel or rig and has simple no screw adjustment. Requires but little power to operate.

Send for one on approval. May be returned at our expense if unsatisfactory.

Long-Bell

THE MARK ON QUALITY LUMBER

A Lumber Salesman Who Talks to Millions

The advertising of The Long-Bell Lumber Company is a SALESMAN working for every dealer in Long-Bell products—working 24 hours a day, every day in the year.

To an audience of millions of lumber users this salesman speaks persistently and consistently of the merits of Long-Bell products. He points constantly to the outstanding quality of Long-Bell lumber; points to the reputation, to the standing and to the service of the concern that makes it. He refers pointedly to the trade-marked name, Long-Bell, branded upon these products.

This salesman says all that the best salesman in your yard says when he sells a bill of lumber. And in the end he points the way to the lumberman who sells Long-Bell products. For all this selling service this salesman doesn't charge the dealer one cent.

Think it over, Mr. Lumberman. Put Long-Bell products in your yard and profit through the work of this 24-hour, year-round salesman.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Gauging Conditions in Lumber Industry

One of the most important resolutions adopted at the last annual meeting of the Canadian Lumbermen's Association was that monthly reports should be presented on manufacturers' shipments and sale, in order that market conditions might be gauged more accurately and matters affecting the industry as a whole be stabilized and strengthened. The producers, if these returns were regularly and promptly made, would know where they were at in regard to stock, production, demand, transportation, etc.

It was pointed out by several of the leading representatives that there was not sufficient definite information regarding the annual available supply of manufactured lumber in Canada—on hand or to be cut, and that more facts should be known with respect to cuts, costs and sales.

In accordance with these facts it was decided that all manufacturers who are members of the Association, be requested to furnish on specific dates the total board feet of lumber, showing what spruce, pine, etc., also lath and shingles, are on hand and unsold at a particular period, and that a similar monthly statement should be issued throughout the sawing season, together with the aggregate amount in feet and sales each month.

It was asserted that all mills making such returns would be acting in a spirit of helpfulness and co-operation; that nothing was to be gained by withholding the figures which would, in any event, be private, and only the recapitulations would be sent out to the members from month to month. The totals would afford the trade a clear conception of where matters stood, of what had taken place during the past thirty days, and how the market, as based upon supply and demand, shaped up.

Although this important and aggressive step was taken over five months ago, it is learned that not much headway has been made. The proper forms were prepared by the officers of the Canadian Lumbermen's Association and sent to the different members, to be

returned to the secretary, properly filled in. It is reported that the statistical returns have not been coming in very satisfactorily and an officer of the Association recently stated that there was little progress to report in this direction. He did not know whether or not it is because the mills are so busily occupied in trying to work out satisfactorily the unusual problems which each day present themselves, yet the fact remains that the Canadian Lumbermen's Association has not been receiving replies from some of the largest producers and, without these returns, the result will not be of much value.

It is true there have been many things cropping up to distract the attention of lumber manufacturers, among them being the labor unrest, the shortage of ships for export, the uncertainty regarding the building situation and the added cost of production and distribution. While these are of themselves most important, still a constructive, creative department, such as the monthly statistical returns of manufacture, shipments and sales should not be neglected. It is hoped that all the manufacturers will fall in line and in the true spirit of co-operation and mutual helpfulness, which is characterizing many present day movements, they will manifest sufficient interest to see that the proposition is crowned with success.

The Adoption of the Cash Basis

Almost anyone can sell goods at a cut price; it requires real salesmanship to dispose of them at regular values. Like the poor man, the price cutter has always been with each trade and in every community, and will, possibly, continue until the end of time. When one bargain shouter or cut-rate "artist" goes down and under in the business game there is always someone else to rise up and take his place. Lessons of the past, the failures of others, the mercantile ruins that are witnessed on all sides, count for nothing in the judgment and experience of some. They imagine they are immune from such reverses and, while certain persons have been baffled, they know a better way, and wish to demonstrate the faith which they have in themselves to push ahead, (and, parenthetically, it might be remarked, they should have equal faith in their goods and sell them at a proper valuation). However, this is outside the issue under discussion.

The retailer who places his business to-day upon a cash basis, is the one who is forging ahead, expanding and making money. Never were artisans, skilled mechanics, farm help and all classes of labor in receipt of such generous remuneration for their services as at the present time, and the products of the farmer are also commanding a higher figure than at any period in the history of the world. What more auspicious occasion than the present to usher in a cash business. Many men are fearful about taking the first step, but after the initial plunge has been made they realize that the move was not a very difficult one after all, and soon learn that the people will come up to the higher standards of merchandising if tradesmen will only lead with calmness, courage and decision.

The retail lumberman has to pay cash for his lumber, has to carry a representative stock, has to purchase in increasingly large quantities and distribute in small lots. Values were never as high, rents were never so stiff, taxes so excessive and labor so insistent in its demands as at this juncture and, in the face of all these exactions, the public is clamoring for specialized and more efficient service. Yet there are many retail lumbermen who are allowing farmers, carpenters, contractors and private builders all sorts of time in which to settle their bills. The day has practically arrived when, instead of large accounts carried from month to month with various people making (or not making,) payments at such times as suits their convenience, that all patrons will have to pay cash.

If the Ontario Retail Lumber Dealers' Association had not done anything in the year and a half of its successful history other than inaugurate better terms and place business on a cash basis, it would have justified its existence. There is now displayed in practically every retail lumber yard office a conspicuous sign to the effect that "no discount is allowed," that terms are "net cash" and that the only accommodation extended is with customers of approved credit who will agree to pay each month's account in "net cash" on or before the 10th of the following month. Now that cards have been printed

to that effect and posted prominently in every office, it is the duty of each member of the Association to live up to the high standard which it is sought to establish.

There is no doubt that industrially and financially the world is undergoing radical changes—not to employ the term revolution, to describe adequately the shifting state of affairs. Early closing is here, the eight-hour day has been ushered in and may soon become universal; the Saturday half holiday is generally observed; labor men are demanding more leisure and better pay in order to live decently and comfortably. If, in the face of all the opposition that has been raised, industrial workers can accomplish so much during the period of readjustment and re-construction following the war, surely the employer, as typified in the retail lumber dealer, can also raise the status and dignity of his business, not only by rendering better service and keeping more attractive yards, a better selected stock and a wider range of supplies, but also by inaugurating the cash system with practically every patron. There is no doubt that as the eight hour day has practically arrived and will extend from one end of the Dominion to the other, so the retail yardman must fall in line and keep step to the music of cash accounts, or, otherwise, he will fall behind in the financial race and be numbered among the "also rans." It takes initiative, energy, persistence, aggressiveness and co-operation, and last, but by no means least, cash to win any present day business struggle.

Mr. Retail Lumbermen, you will never have a more auspicious opportunity to place your affairs on a cash basis than at this very moment, and it behooves you, in the progress of economic events to do so without further delay or ado.

Naturalness in Publicity Appeals

Natural expression in print, as in conversation, carries with it, says D. A. Reidy, in "Printers' Ink," a certain weight and confidence that adds 100 per cent. to its selling effect. Why not? The natural language of business is the language of the street as ordinarily heard. Men do not sit at a business deal and conjure up symphonic sentences to impress the other fellow with their meticulousness of words, or write business letters that sound as if every sentence was written with the aid of Webster's Unabridged. The salesman who would talk to his customers in the stilted language of the ordinary kiln-dried ad. would be looked upon as a martinet. Nobody but a literary gent would undertake to sell goods to any ordinary prospect by indulging in set sentences set forth. In salesmanship, as in other human relations, if the touch of human nature is lacking, the effort is very liable to lose weight. Why not apply this same rule to salesmanship in print? In truth, whenever this very thing has been done, the effect has not only been refreshing to the mind of the reader and carried complete confidence, but in some notable instances that occur offhand, you will agree it has produced remarkable response.

We remember, with what relish some years ago, we swallowed the blithe business messages of a big St. Louis hardware house written by "Mike the Teamster" in a style and language we all could understand and some of us happen to know how said hardware concern in a short time trebled its business as a result of the house organ being written and edited entirely by "Mike." Also we recall with gusto the first time a daring young Lochinvar broke into print with the longshore vernacular and abjured us gentlemen of the upper crust to pack our old Jimmy pipes with that sure enough baccy stuff called for convenience P. A., which, being only human, several million of us immediately proceeded to do and have kept on doing ever since.

That there is something more than mere novelty or cleverness in getting off the pedestal and chucking the rules for a change, was still more recently proved by "Jim Henry" who, so to speak, took off his coat and collar and dared to talk everyday salesman's language with the result that the Post Office was fairly gummed up for a while sending out millions of sample shaves ordered by people who didn't feel at all resentful at the every-day naturalistic conversation of Jim. People do like to feel that they can touch elbows with a business concern in print, just as they would in a Pullman smoker or

the lobby of a hotel. Every time it has been tried out, within reasonable bounds of course, the natural note in copy has made a hit and the wonder is that it is not being done a great deal more, considering the undeniable fact that the Colonel's Lady and Judy O'Grady are now, always have been, and always will be sisters under the skin.

As an example of this sort of free-hand treatment applied to a serious appeal, every one who saw it will recall a Victory Loan ad. that appeared in New York newspapers the other day. It told of a boy who struck his foot through the Victory Arch on Fifth Avenue and found it was only papier-mache. As you read it, you could almost see the boy pulling his foot out of the mock marble pillar with a look of sorrow on his face. This ad. was not written according to rule or sat on by a Board of Experts, or changed twenty different times, or passed from one judge to another to see where it could be improved. As a matter of fact, it was dictated red hot to a typist, never read a second time by the author, and went into print with all its original barbs and burrs, and maybe that very fact explains why it left such a fetching impress on the reader's mind. One cannot help admiring the audacity that dared to use the expression, "stuck his foot," instead of "penetrated with his boot" or "punctured with his shoe" or some other Sunday school phrase that might be suggested by the rules. This piece of copy broke all the ten commandments as to length of sentences and selection of words, but it drove straight home even among advertising men and on account of its unusualness carried the reader right along.

Thus are we being gradually shown in various ways that the book, "How to Write Good Copy," may soon be on its way to the waste basket and that the first, last and middle rule for writing good copy is to be, first of all, a good business thinker, and then express your business thoughts easily, naturally, spontaneously and sincerely—thus making your own rules.

Better Support to Worthy Institution

The Federal Government of Australia has established a Bureau of Science and Industry for the purposes of industrial research. Included in the scope of the Bureau's functions will be a Forest Utilization Laboratory, which will be located at Perth, Western Australia, and with a view to securing the latest data, preliminary to the establishment of the laboratory, the Government has commissioned Mr. I. H. Boas to visit the research laboratories in the U. S., Canada, England, France and India. Mr. Boas will be the head of the institution.

The Australian Government is planning to develop the country's forest resources on an extensive scale. At present the country has large stands of hardwoods, but it is felt there is an opportunity to produce softwoods in considerable quantities. Experiments are now being carried out with Maritime pine, on sand waste areas.

Mr. Boas visited institutions in the United States, paying particular attention to the work and equipment of the Forest Products Laboratory at Madison, and was very favorably impressed by the work carried on there. Mr. Boas also visited the Forest Products Laboratories of Canada at Montreal, and left on July 11th for England.

In connection with his visit we desire to emphasize a point to which we have made previous reference. It is this—the necessity of Canada adequately supporting the Forest Products Laboratories. While the Australian Government is evidently alive to the possibilities of developing the country's forest products, and is spending a large sum in securing the latest information as to what is being done in other parts of the world, Canada is very parsimonious in her support of an institution which has done, and is doing, excellent work in investigating scientifically her forest products. The Laboratories train men, and promptly lose them to lumber and pulp and paper companies, owing to the inadequate salaries paid by the Government. The subject has been ventilated in the House of Commons, and the Department recognizes that the country is being deprived of the services of good men, but so far nothing has been done in the way of increasing their remuneration. Until that is done the country can-

not hope to retain men who possess technical knowledge relating to industries which are rapidly expanding, and who can find a ready market for their knowledge in service outside the Government.

Editorial Short Lengths

If the report of the impending resignation of the Hon. Jules Allard, Minister of Lands & Forests for the Province of Quebec, be confirmed, the lumbermen of the province will lose a good friend. Mr. Allard has the reputation of considering questions with an open mind, and with a desire to conserve the natural resources of the province. His work in connection with the protection of forests from fire may be cited as an instance of progressive policy. Mr. Allard rightly regards the forests as one of the most valuable assets of the province, and his aim has been to preserve them from wanton destruction. Quebec has been a pioneer in the campaign for the perpetuation of forests, and no man has done more than Mr. Allard towards achieving that object.

* * *

In view of the large sales of lumber to the U. K. the decline in sterling exchange is of more than ordinary interest to the Canadian lumber trade. Unless sterling shows more strength, trade between Canada and the U. S. and the United Kingdom is likely to be considerably restricted, as British importers will only buy the barest requirements under the circumstances. A committee of foreign bankers in New York has been considering the question. In the lumber trade, exports for private account have been curtailed owing to the uncertainty of the exchange market, combined with the high freights. The demand for space for all kinds of commodities is abnormal, and the steamship lines are able to command rates which are out of the question so far as lumber is concerned. As one exporter put it: "There is no use shipping for the sole benefit of the steamship companies. All our profit is swallowed up by the freight charges."

* * *

The visit of the Woodlands section of the Canadian Pulp and Paper Association to Laurentide, P. Q., recalls what is being done by lumber and pulp and paper companies in the matter of erecting houses for the workpeople, and in other ways providing better conditions for the men. This is a question of vital importance, in view of the universal industrial unrest, which fortunately has not affected these industries to any extent. The Laurentide Co. has been a notable leader in this work, and Mr. F. A. Sabbaton, of that company, in a paper read before the first meeting of the Woodlands section, strongly advocated companies giving increased attention to the subject. The Laurentide Co. has a model town at Grand 'Mere, and has spent large sums in efforts to make life more tolerable, providing a hotel, club-houses, free school, skating rink, tennis courts, playgrounds, golf links, and a large farm and truck garden.

Other companies are also working on the same lines, particularly in the direction of good housing. We may allude to the St. Maurice Paper Co. at Three Rivers, P.Q.; the Donnacona Paper Co. at Donnacona, P.Q., the Abitibi Co., in Northern Ontario; the Kipawa Co. at Temiskaming, and the Riordon Company at Hawkesbury.

Looked at merely from the point of the companies, such schemes are of value, in that they engender a feeling of attachment to the various firms, and thus ensure a continuity of employment which makes for efficiency. Men who have pleasant surroundings and comfortable houses are more likely to remain in a town than when such conditions are unsatisfactory. The companies are putting up well-designed and laid out houses, and do not look upon such schemes as revenue producers. The central idea is to afford excellent accommodation, and to keep the labour, giving, in some instances, opportunities for the men to fill responsible positions. The outlay has been large, but according to Mr. Sabbaton, the results have more than justified the expenditure.

* * *

The Laurentide Co., Grand Mere, has instituted a safety first departmental honor roll which might be copied, with advantage, by other large firms. A bulletin board, placed in a conspicuous posi-

tion, records during each month, departmentally, accidents as they occur, the department sustaining a lost time accident having its name transferred from the left or honor side to the right of the board and remaining there until the end of the current month.

The following table shows the standing of the "honor roll" from May 1st to June 30th, 1919, inclusive:

Department	No. of Accidents	Average No. of employees	P.C. of accidents per 100 men.
Miscellaneous	170.0	..
Wood mill	160.2	..
Sulphite	112.4	..
Village	107.9	..
Ground Wood	106.3	..
Mill Supply	32.7	..
Real Estate	30.0	..
Electrical	22.4	..
General Mills	2	426.4	.47
Paper	2	341.5	.59
Steam Plant	1	53.0	1.89
Total	5	1563.	

The institution of such an honor roll is calculated to impress on the employees the value of carefulness in their work, and to inspire each department with a desire to figure on the safety side of the roll.

As in the other industries, scientific research work is of prime importance in connection with those industries using wood as a raw material. Such work furnishes accurate knowledge of the characteristics of the different kinds of wood, reveals new uses for them, shows how to reduce waste and decay, and brings to light by-products that can be secured from otherwise wasted materials.

This work in Canada is carried on in connection with the Forest Products Laboratories, conducted by the Forestry Branch of the Department of the Interior, in co-operation with McGill University, Montreal. The laboratories are laboratories of practical research. As the benefits of the work done will only be realized when the results are made use of in the industries, every effort is made to maintain a close co-operation with the industries. The laboratories are furnished with very complete and up-to-date equipment, particularly for testing the strength of timbers, for the manufacture of paper from wood, and for the preservative treatment of ties and posts. The semi-commercial experimental paper machine is the most complete in America.

The work carried on includes the study of the physical and chemical structure of the different kinds of Canadian woods, the testing of their strength, the study of the agencies destructive to wood and the best means to preserve the wood from decay and to properly and quickly season it, the study of the methods of wood distillation and of the manufacture of paper from wood. The last line of work is particularly important at the present time on account of the fact that during the war the cutting off of European manufacture greatly increased the demand from the United States for Canadian wood pulp and paper. The existence in Canada of very large forests of spruce and balsam, which are the kinds of trees most used for paper manufacture, assures her an important place in this industry if she can develop methods to produce pulp and paper of sufficiently high quality and cheap enough to meet all competition.

The importance of the timber resources of the province of British Columbia and the necessity of investigation at close range problems in connection with the timbers peculiar to that province led last year to the establishment of a branch forest products laboratory in Vancouver. The establishment of this laboratory was especially urged by the Imperial Ministry of Munitions, who wished to secure information in regard to the properties of woods used in the construction of airplanes. Since the conclusion of hostilities this work has been proceeded with on account of the importance of complete knowledge of the woods suitable for airplanes in view of the probable development in the use of these in the near future for other than military uses.

Some Present Day Problems of Lumbermen

How Enterprising Yardmen May Extend Business and Improve Their Facilities —Getting After Rural and Town Customers—Practical Pointers

For several days lately I have been passing a place where an old fourteen-room residence was being taken down to give place to a brick business building. I have been greatly interested in watching the condition of the lumber that came from it. The house was built over fifty years ago, and at the time was one of the finest in the town. The lumber that went into its construction was, of course, white pine, which was all that could be had at that period. Both the sheathing and dimension were rough and of full size in width and thickness, and some of the boards were equal in quality of grade to the present "C" Select. It looked a waste of good lumber to use such for sheathing purposes, says C. H. Ketrige in the "Mississippi Valley Lumberman."

It was remarkable to note the perfect condition of the entire lot of lumber as it was taken down. I made a special investigation in this matter of preservation and found only a few instances where there was decay, and these were at the ends of some of the sills and under the porch and bay window. And all of this, I don't think, would amount to a hundred feet. The nails were of the old-fashioned cut type and as good in condition as the day they were driven. The house had been reshingled but once since it was built and white pine shingles used each time.

I made some inquiries about the cost of lumber here at that time, and as near as I could ascertain, common lumber was selling in bills at \$10 and \$12 a thousand. A good deal of this stuff was being sold as it was taken down from the building. It was sold by the piece at 2 cents a lineal foot for 2 x 4's; 3 cents for 2 x 6's; 4 cents for 2 x 8's, and 5 cents for 2 x 10's. So, you see, the wreckers were getting a little over \$30 a thousand for lumber that originally cost about one-third of this. A man who was buying some of this stuff said they asked him 95 cents for a yellow pine 2 x 8-14 at the local yard. Compare this with the selling price of fifty years ago. It may be said, however, that the low price here at that time was owing to its being bought at a yard that was near the lake dock that was here at the time, but which was removed many years ago. You can estimate what lumber was selling at in the country towns of this section of the state.

Remodelling is Paying Proposition

I was talking with one of our local real estate dealers the other day who makes a business of erecting buildings and selling them. He said he was not building any new ones now, but he was buying old houses and remodelling them to suit the more modern requirements. He was doing this because it involved a less investment and with the strong demand for houses he found little trouble in selling them. I took occasion to write something about this matter of remodelling old houses some weeks ago, but I believe it of such importance to mention it again, because, as I view it, it is going to be a paying proposition for the retailers to take hold of the matter and develop it, especially in the country towns. As I have said before, most of these places have done growing in population and the houses now there are sufficient. Very few new houses are being built in these towns, and this will continue for some time to come if people wait for prices of material to be much lower than they are. There are few of the older towns in which there are not people of means living in these old houses who are able to have them remodelled so as to give them the more modern conveniences. Then again, there are more or less of these houses that are occupied by tenants, and are generally in a run-down condition. The owners can't sell them, and so they rent for what they can get and doing as little repairing as possible on them.

In a Kansas town the business men's club took this matter up and after investigating the possibilities, thought it worth while to salvage these old houses. And so they went at it and raised a fund to purchase these neglected places and make them over into new and attractive homes and put them on the market for sale. This action served to arouse interest among those living in their old houses and started some of them on the work of remodelling them. My information does not extend to giving the particulars, but I'm pretty sure it was the lumber dealers of the town that first started the proposition and worked up the interest of the community in the project.

As a rule people in most of these old towns have grown disheartened about attracting new enterprises to come there. Many have tried it and made a failure, but there is no good reason why they cannot go at it and improve what they have in the town, and as this is mostly buildings, a concerted action to make improvements on these would result in making the whole town more attractive and arouse a greater

civic pride in the inhabitants. The more attractive a town is in its business and home buildings and the general upkeep of the place, the more likely it is to induce other people to come and build new homes there, because such a town is more desirable to live in. The hardest part of this proposition is to arouse a sufficient degree of interest to induce people to give it the attention to examine into it, and this work naturally falls on the lumber dealers of the town. Combining together for this purpose undoubtedly they will be able to induce a few more of the progressive spirits to join them in the initial work of starting it, but the lumbermen will have to furnish the steam to carry it on.

Would Rather Erect New Houses

I am well aware of the chronic state of mind of lumber dealers and carpenter-contractors regarding old houses. It is generally the case that when the owner of an old house consults them about the feasibility of remodelling it, they usually seek to advise him to pull it down or remove it to another lot and build a new one. Lumbermen do this for the reason that they will sell more material and the carpenter-contractor because he don't like the job of tearing out the inside of an old building and working over old lumber. They prefer to use new lumber as long as others are paying for it. But both of these parties must change their attitude in this regard, because lumber is getting too valuable to let old buildings go to waste, as a great many are now doing. And paradoxical though it may seem, it is to the interest of the lumbermen to prevent this as much as possible, for a lot of old dilapidated buildings invariably operates to discourage the growth of a town, not only from the outside but also from the inside for the continued appearance of these old "shacks" exerts a depressing effect on the community. It makes one feel "blue" to look at them, and gives him the feeling that the town is "going to the dogs."

We are affected and educated more through the sense of sight than by anything else, though we do not realize it. No individual can do his best when in a depressed condition of mind. Neither can a town make progress where there is a chronic depression caused by the sight of general neglect and dilapidation of its buildings. Go into some of your old stores with their dingy fronts and unkempt condition of the interiors, and you'll never find the storekeeper occupying one of these in anything but a pessimistic frame of mind. He can't be cheerful in the face of such surroundings.

The Effects of Our Environs

It is a well known fact that during a continued period of cloudy weather business is not so good as it is on sunny days. There is a lack of ozone in the atmosphere to stimulate activity. So it is with the effect a dingy looking town has upon its inhabitants. The surroundings of such a place deaden the spiritual ozone that produces activity in a community. A town that is backward in making itself attractive in appearance does not get the share of the trade it ought to have. Farmers and their families like to go to an attractive looking town and a good many will obey this impulse and take their trade from their unattractive home town and drive farther to where the surroundings are more pleasing to the eye and there is a sense of enjoyment of the change from the dull environments of their own farms. And they are justified in their action in so doing, although they may be barely conscious of their reasons for it.

Business men in these old ramshackle towns of course complain of this loss of trade, and they attribute it to the lower prices obtainable in these more attractive towns. This is more imaginary than anything else, as they would find out if they took the trouble to investigate. Every town wants more farmers to come there and do their trading, but only a few of them ever seem to think that farmers enjoy going to a town where the business men act as though they wanted them and the community does things that will attract and insure their making it their regular trading place. And now the farmers have got their riding machines, they are going to more and more leave the unattractive towns in the lurch and go where it is manifested they are wanted.

Keeping Farm Buildings in Repair

When I lived in the country, I have been out on some of the rented farms and seen the conditions under which some of the renters were compelled to live. Some places were better than others, but the large majority of the houses were hardly fit for a family to live in,

and the other buildings, limited in number to the veriest needs, were of the same character. I always felt sorry for these people. Some of them had been accustomed to better things, but misfortune had compelled them to take what they could get. The owners of these farms had no interest in the living of their tenants and cared less. Getting their rent was about all that interested them.

I presume there has been some improvement in these conditions since then, but even now, I guess, the houses and buildings on tenant farms are not what they should be, considering the better times for farming. Farm owners complain of the general poor character of tenants. Farm leases are generally for one year, and the tenant never is certain of his tenure on the place. Consequently he has little interest in spending his own time and money in making improvements, and so the next tenant takes the place as he has left it. The better class will not live on these places, and therefore, these farms with

their rundown living places, are left to be occupied by the poorer class of tenants. And the influence of such home surroundings on the families is not conducive to developing a progressive spirit.

With the increase of tenant farming, it is becoming more and more to the interest of the lumbermen in country towns to promote a movement for improving the living conditions on these tenant farms for the continuance in growth of their business depends on it.

Just figure up the number of tenant farms there are in your territory, and then estimate the difference in volume of your trade if these farms were kept up in improvements on the same scale as those that are occupied by their owners; and also the additional trade in other lines it would bring to the town. Consider, too, the improved morale it would produce in the farming community and this better spirit would want to come to an attractive town, for like seeks like in everything in human relations.

Securing Future Forest Crops of Quality

The Necessity of Aggressive Conservation Methods in Keeping British Columbia in the Forefront as Great Timber Producing Province

There are many differing opinions as to the necessity for conservation in order to secure future forest crops of the same high quality for which B. C. is becoming justly famed. Some say that climate conditions at the Coast will continue to bring up similar forests to take the place of those logged-off and burned, as for thousands of years in the past. Others, on the contrary, claim that with the logger have come changed conditions against which the naturally reproductive elements are waging a losing fight. The advocates of both sides are worthy of attention, more especially at this time when we are planning to make British Columbia not only the main source of the Empire's lumber supply, but also the foremost lumber producing country in the world.

It may be interesting, then, to recall some of the results of an investigation conducted by C. D. Howe, Ph.D., some years ago, to discover the present state of reproduction of commercial timber (more especially Douglas fir) in the Coast region of B. C. The investigation

Judging by the age of the fire scars on the older trees, it was determined that during the past 20 years a fire had occurred once in five years. From 20 to 100 years ago the average interval between fires was 27 years; while from 100 to 360 years ago severe fires took place at intervals of 86 years. The rate of fire occurrence had therefore increased enormously in recent years, and practically all of these fires were upon logged-over areas.

Now, one burning stimulates the reproduction of Douglas fir. It is, in fact, regarded as necessary for the establishment of dense stands; but a second burning is disastrous, as it kills more of the seed trees and the young growth following the first fire. There are not sufficient seed trees left to start another plentiful crop of trees on the area.

Crowded young growth, of course, produces the best quality of lumber, as the shade is so dense that the side branches are killed off early in the life of the tree, and the wood laid down on the stem afterwards is free from knots. Crowding also forces the young trees to grow more rapidly in height and more uniformly in thickness, which means more logs to a tree and less taper to a log. There is good evidence for the belief that the dense stands of Douglas fir which follow the first fire do not come only from one crop of seeds, but from several crops that have accumulated on the ground waiting for a favorable opportunity to germinate when the over-shading trees and undergrowth have been removed. Dr. Hofman demonstrated this in the Columbia national forest, Washington. An extensive area was burned in 1902, and all the seed trees were killed. In 1913, dense stands of young fir of from 5 to 11 years old were found. Since the seed from which the younger trees sprang could not have been blown in by the wind, they must have lain on the ground and retained their germinating capacity for from one to six years after the fire. This capacity of Douglas fir seeds to retain their vitality for at least six years gives an opportunity for the accumulation of several seed crops from which the dense stands arise.

Mr. Howe found that the reproduction of forest after logging without burning was "scrappy." The removal of the over-shading trees stimulated the growth of the under vegetation, such as bracken fern, salal, etc. These together with the slash, formed such a shade that most of the fir seedlings which sprang up had soon died. The young seedlings to grow must have overhead light, and to grow vigorously they must have considerable light.

Mr. Howe, therefore, recommends the light burning of slash and undergrowth after logging operations.

An exhaustive investigation into the forest resources of British Columbia has recently been completed by the commission of conservation. The preliminary report made public shows that of the total land area of the province, (355,855 square miles), approximately 200,000 square miles is incapable of producing forest of commercial value. About 145,000 square miles lie above the merchantable timber line, and on 55,000 square miles the soil is either too rocky or too wet, or the forests have been so completely destroyed by fire that there is no hope for the natural re-establishment of forest conditions for centuries to come. Of the remaining 155,855 square miles which is capable of producing forests, only about 28,000 square miles carries sufficient timber to be classed as statutory timber land. The timber on about 100,000 square miles has been totally destroyed by fire, and that on over half of the remaining 55,855 square miles has been seriously damaged.

Old growth timber in Squamish district, Howe Sound, B.C.

was made on the eastern side of Vancouver Island as far north as Union Bay, and on the mainland as far north as Powell River. It was carried out five miles inland, and a total area of 1,000 sq. miles was thus explored.

Of the mature forests, Mr. Howe found that up to an elevation of 2,000 feet Douglas fir was the predominating tree species, comprising between 70 and 80 per cent. of the stands and topping its forest companions in growth. Taking all the trees into consideration, Western hemlock outranked the fir in numbers. It was in good development along streams, on north facing slopes, in gullies and depressions, and on the flats at the head of lakes. Western cedar was a less common associate of the Douglas fir. Balsam, spruce and western white pine occurred only scatteringly in the Douglas fir forests.

A large number of stands of mature fir were observed in which the trees were nearly all of the same age, viz., 315, 170 and 124 years; and it was evident, from examination, that these stands had been established as the result of fires. It was also noticed that practically all the reproduction of commercially plentiful Douglas fir was taking place on areas cleared once by fire alone, or by logging and fire combined. On areas swept more than once by fire, or not burned at all, the growth was insufficient to insure the re-establishment of the commercial forest.

New Chief Forester of Abitibi Co.

H. G. Schanche, Iroquois Falls, Ont.

Mr. H. G. Schanche has recently been appointed Chief Forester of the Abitibi Power & Paper Co., Ltd., of Iroquois Falls, Ont. He is a graduate of the Pennsylvania State College at which institution he pursued the course in forestry. Prior to the entrance of the United States in the war he was connected for over three years with the Forestry Division of the Laurentide Co., Ltd., of Grand Mere, P. Q. He was also for a time engaged in logging and lumbering in Central Pennsylvania. Enlisting in the U. S. Engineers, he later transferred to the Air Service and was subsequently promoted to a lieutenancy in that branch.

Since taking up his new duties, Mr. Schanche has selected a site for a Forestry Nursery and the clearing and preparation of the same is now in progress. The output of the nursery will be made to satisfy the demands of the reforestation program of the Forestry Department. Mr. Schanche will leave shortly on an extended trip over the limits of the company in order to gain a first hand knowledge of the same, following which a working plan will be drawn up for the surveying and mapping of the holdings, work on which will be begun this fall. A regeneration survey on virgin and cut-over areas is at present being carried on within the company limits. The work is under the direction of Dr. C. D. Howe of the Commission of Conservation and is similar to the investigations of a like nature recently conducted by him on the Laurentide and Riordon limits.

Invents New Method of Lumber Shipping

John Arbuthnot, who was mayor of Winnipeg from 1903 to 1905 and has since been living in Vancouver, has invented a new method of transporting lumber across the ocean. His clever device is described in the Industrial Progress and Commercial Record, the official organ of the Manufacturers' Association of British Columbia.

The idea is to make a ship of the lumber itself, first laying down a keel, then piling on a superstructure of timber and bolting the whole securely together. Sails and auxiliary engines are to be supplied and there will be quarters to accommodate the crew. When the "ship" is taken apart and marketed, the engine, sails and crew will take a regulation steamship back to Canada. It is calculated that whereas an ordinary freighter carries about 1,500,000 feet of lumber, this will carry 5,000,000 feet at one trip.

The experiment is to be tried immediately in transporting to England the first consignment of a large order which has been secured by Mr. Arbuthnot's firm through the British Purchasing Commission, to supply lumber for rebuilding devastated areas of Europe.

Brompton Company Shows Good Earnings

The half yearly statement of the Brompton Pulp and Paper Co., Limited, of East Angus, Que., has been issued for the period ending April 30. J. A. Bothwell, who is president of the Canadian Pulp and Paper Association, is the general manager of the Brompton Co. The statement reveals gross profits of \$517,355 against a total for the full previous fiscal year of \$1,051,275, or at practically the same rate. After deductions of expenses, bond and bank interest, as well as preferred dividends, net available on the common stock is \$343,118, as compared with \$1,114,000 in the full previous year, or at a somewhat lower annual rate. The carry forwards for the half year amounts to \$168,118.

President F. N. McCrea, commenting on the figures, says: "Under the circumstances the earnings statement, showing, as it does, the common dividend earned nearly twice over, may be considered a satisfactory indication of the company's earning power under adverse conditions. The results were due largely to the diversified nature of the company's activities."

Suggests Gas Bombs for Forest Fires

If the suggestion of a settler in Northern Ontario as to the best method of putting out forest fires had been acted upon by the Department of Lands, Forests and Mines, the Provincial Treasurer would have had to impose a tax on the use of tooth picks to meet the financial expenditures of the current year. The Department is in receipt of a letter from a settler suggesting that the best method of

putting out the fires would be to drop bombs of carbonic acid gas on the burning areas. It was figured out that it would cost the province \$375,000 an acre to extinguish fires by this method and, with several thousand acres of forest involved, it would have cost the province millions of dollars.

During the recent forest fires, the Department has taken every precaution and every step to stamp them out as soon as possible. The system adopted is, with the possible exception of France, the best in the world. Hundreds of men were sworn in by the Department to help fight the flames. In the Cochrane district alone one hundred men were engaged, and at Porquois Junction there were fifty additional men. There have been cases where settlers actually refused to help the fire rangers. These settlers have been arrested and are now awaiting trial. Under the statutes the Department is given full authority to swear in extra men in case of such an emergency, and they have done so to the fullest extent of the capacity during recent fires.

The Market for Pit Props in Britain

J. E. Ray, Canadian Government Trade Commissioner of Manchester, Eng., in a recent report to the Department of Trade and Commerce, Ottawa, in speaking of the outlook of the pit prop, railway sleeper and telegraph pole says:

Previous to the outbreak of war British timber merchants drew practically all their supplies of pit timber from European countries. Approximately three million loads were imported annually, half of which quantity was furnished by Russia and one-third by France. Sweden, Norway and Portugal contributed on a smaller scale to the total. The proximity of these countries to the consuming centres of the United Kingdom gave them an advantage over transatlantic competitors, so that no serious attempt to compete was made by either Canada or Newfoundland. With supplies from the usual sources curtailed, purchasers naturally turned their attention to Canada and Newfoundland, with the result that in 1915 timber limits were taken up even by colliery proprietors, if not in the former country certainly in the latter, and small supplies came from that source for two years. In 1917, however, supplies ceased, and only limited quantities have since been brought in. In 1916 there were signs that Canada might take advantage of the shortage in Great Britain, but it is understood that lack of tonnage prevented the development of a promising trade. The imports from Canada in 1916 exceeded 21,000 loads, but they fell to 1,280 loads in the following year.

At the present time, importers are turning their attention to the old sources of supply again, but with Russia still in a chaotic condition the collieries are managing on scanty supplies. Strenuous efforts have been made to draw timber from the home forests, but transportation difficulties continue to impede progress.

The trade is still under partial Government control, and is likely to remain so until October next at any rate. To what extent Canada will be able to export to the United Kingdom in the future depends upon her ability to compete with countries nearer to the British collieries. Naturally prices can never be so low as they were in pre-war days, and the curtailment of supplies from Russia, the main contributor prior to 1914, prevents any hope of an immediate decline in prices. France appears to be taking full advantage of the situation, for it is stated that her exporters reap a profit of 13s. per ton, while the pitwood importers in South Wales obtain but 2s. per ton.

Compared with pit props, the imports of railway sleepers are comparatively small. In 1914 the total imports were 216,231 loads, of which Russia furnished 106,096 loads. Canada attempted to capture a portion of this trade in 1916, but her supplies only reached 8,816 loads, and in the following year they fell to nil. The United States took advantage of the decline in imports from Russia by increasing her sale from 1,229 loads in 1914 to 105,890 loads in 1915, and to 155,226 loads in the following year. In 1917, however, her sales fell to 1,025 loads, due to lack of transportation facilities. The effect of the dearth of tonnage is reflected in the total British imports of that year, which were 21,298 loads against 216,321 loads in 1914.

It is felt by timber importers that the forests of Canada should make possible a larger export of sleepers, although the question of competition again with European countries will have to be confronted.

The British Government is usually in the market for about 50,000 telegraph poles a year. Tenders are solicited in the month of July, and specifications are invariably sent out to recognized contractors to the Government. Before the war it was specified that all poles should be of Russian or Scandinavian red pine. During the last three or four years this stipulation has been somewhat modified owing to circumstances associated with the curtailment of supplies from pre-war sources. It should be stated that Scandinavian exporters found it necessary to utilize the services of British pole merchants, due to the stringent clauses in the specifications, and a similar course should be adopted by Canadian firms anxious to obtain a share of the trade. The leading pole merchants will furnish copies of the specifications.

Difficulties Lumber Salesmen Have to Face

The Fellow Who is Waiting For Something to Happen, the Doubter of Increased Cost, the Kicker on Service and the Business Bolshevik

It is needless for me to review what has taken place within the lumber industry during the past four years to convince you that an evolution of more than ordinary importance has taken place, that the lumber industry, as an industry, is a far better merchant, in a much better position to render service and more efficient than it was in 1914, said H. T. Kendall recently before the American Lumber Congress. The great lesson the war has taught the world at large and the lumber industry in particular, is the value of unified strength and co-operative effort. It cannot be more than five years ago when a shivering few met in this room to witness the death throes of the National Lumber Manufacturers' Association. Since that time the National Lumber Manufacturers' Association and all of its component regional associations have so developed and have become so needful to the industry that their positions are secure and their future assured.

This development of co-operative effort has moved along two lines. First, co-operative effort within the divisions of the industry, and second, within the last few months co-operative effort among the great primary divisions of the industry.

From the manufacturers' standpoint, the salesman comes in closest touch with the other two branches of the industry, and therefore he can readily see the need for such a council and the value of the work that has already been done.

In this reconstruction period there are certain definite situations that every salesman of lumber has to face, and from these many perplexing problems. I have selected for brief review the following:

First, the problem of the man who is waiting for something to happen.

Second, the problem of the man who does not believe that costs have increased.

Third, the problem of the man who kicks on wartime service.

Fourth, the problem of the man who is a business bolshevik.

I will take these up in the order I have named them, and first consider the problem of the man who is waiting for something to happen.

The war was over, the armistice was signed. Now surely things were going to happen. Days passed and lengthened into weeks, and the business world began to rub its eyes, and wipe its spectacles. Nothing happened.

Everybody agreed that something was going to happen, but nothing did happen. Now the reason that nothing has happened is because no collective progress can be made without the full appreciation by each individual that he has certain definite responsibilities. Having accepted these responsibilities it is up to each one of us to do something so that the whole structure may move forward.

The manufacturer must stop worrying about and figuring over his costs. He must get out and do something in a creative way that will assist in reducing costs. The retailer has got to get out of his chair atilt against the sunny side of his shed, and stir up something. The wholesaler has got to quit telling his hard luck story to both the manufacturer and the retailer and use his genius in creating some demand.

Having concluded that we, as individuals, have a definite responsibility, and that we must accept and act under that responsibility, before we can look for general progress, the question naturally occurs: What can I do? The very first thing that any of us in the lumber industry can do is to become convinced that there is prosperity ahead, and that now is a good time to do business.

Let us assume that we are convinced that now is the time to move forward, the first thing to do, as I have already mentioned, is to sell this idea to the other fellow. This means not only other salesmen, but the buyer and the ultimate consumer. In other words, the first thing to do is to advertise our belief and our convictions to the world.

The problem of the man who does not believe that costs have increased:

The salesman of any commodity is at the present time spending a large portion of his time explaining the price of his goods. So far as the lumberman is concerned the buyer will admit that he needs lumber or that he would build if he did not believe that prices would be lower later on. I have argued this point of costs out to a finish with retailers and wholesalers, with my friends who are figuring on building, and with the retailer's customer, when opportunity afforded, and after failing to get a decision in many bouts of this kind, I stumbl-

ed upon a method that is at least productive of some results. It does not always bring a knockout, but sets the other fellow to thinking. It is the simple old-fashioned method of muddying the water by doubting the other fellow. Most men with whom we do business are producing something, and I care not what line it is, costs and sales prices have increased, consequently after a few moment's discussion of lumber costs and value, I permit the subject to be changed and gradually work the other fellow around to his line of business, and casually ask him about the price of his commodity.

Turn the Talk in Different Direction

After you have permitted your erstwhile victim to expiate for a few moments upon the cost of his product and selling price of it, it is perfectly proper for you to quietly ask him why, if his costs have increased from 150 to 300 per cent., is it not reasonable to suppose that the cost of lumber has advanced 87 per cent. I will leave it to you whether or not the lumberman has any apology to make.

The problem of the man who kicks on war-time service:

At a glance this problem would seem to be a dead issue, but it is only the salesman on the firing line that can appreciate just how much of a factor this is at present. It is peculiar how willing we all are to excuse our own deficiencies, but how slow we are to excuse the same deficiencies in others.

No business man should be asked to explain or apologize for the service rendered during the war, because we are all living in the same glass house. The buyer of lumber should be fair enough to at least credit the manufacturer or retailer with the intent to do the best he could under most trying circumstances. Everyone's energies were concentrated in one direction. Nothing else counted. Aside from the handling of the emergency orders created by the war, every business man should have the right to ignore any criticism of wartime service, but at the same time he must accept and forget the record of the other fellow.

The problem of the Business Bolshevik:

In every line of effort we run across the man who will not co-operate in anything. He does not believe in modern methods—in short he is an obstructionist. The doctrine of the Bolshevik has been defined as a doctrine of selfishness. In the lumber business the line of demarcation is becoming more and more clearly marked. There is a distinct division between those who do and those who don't. This type of business man is not peculiar to the manufacturer, the wholesaler or the retailer. He is not peculiar to the lumber business. You will find him in every line of human endeavor.

Men of this character most generally respond to an appeal based on possible profits. The "build a home" campaign offers a particularly good starting point, because it brings in a direct and visible return. After you have demonstrated the possibilities of co-operative effort by direct returns, it will be easier for you to interest him in the general association work. If possible harness him and put him to work. The associations in this country that have made the greatest success to-day have made it through their ability to keep busy along some line, every one of their members. Never overlook the fact that the measure of success of co-operative effort depends upon the value and strength of the individual effort.

Making Competitor See His Defects

If you continue to outgeneral and outsell your competitor you are sooner or later going to make him see the defects of his own salesmanship, and when he comes knocking at your door asking for assistance, do not remember the days that you spent trying to get him to work with you on your "build a home" campaign, or urging him to join your association, but remember the day when you sat in your own little office, confronted with seemingly unsurmountable difficulties and then when you went abroad and got a wider viewpoint you saw your own troubles dwindle to nothing; your own problems solved in the solving of the major problems of the industry. "If you will remember that, you will know how to handle the repentant bolshevik."

In conclusion I wish to again suggest that this meeting seriously considers such an organization as a national lumber council, composed of retailers, wholesalers and manufacturers. As the scope of association work broadens and as we gradually come to recognize our inter-dependence, such a council as this seems to me to be a clear necessity. On the other hand and while considering a further development of organized effort, I also wish to again call your attention to

the necessity for a continued individual effort. Do not for a moment think that your association, or your community is going to get along without something from you. There are two kinds of labor: productive and nonproductive. In a sense this definition may be applied here. If the majority of an industry or community are alive, hustling, wideawake, aggressive business men, willing to get away from their own business for awhile and do something for the common good, you will find a prosperous group of people, but if in that prosperous body the drones, or non-producers, gradually increase until they are in the majority, you will see a decaying industry and a shrivelling community. One of the great dangers besetting the success of association work is the overlooking of this simple truth. We get to recognize the association as a great force and being a great force, we expect it to continue without effort from us. So finally, I leave before you this broad principle, that no great co-operative success can be permanent without continued individual effort.

The man who is waiting for something to happen; the man who does not believe costs have increased; the man who kicks on war-time service, and the business bolshevik, are problems respecting which co-operative effort only can point out possible solutions. It is up to you and me as individuals using the knowledge in our possession to meet these situations and move forward.

Yardmen to Sell Lumber at Cost to Soldiers

Through the agency of the Ontario Retail Lumber Dealers' Association an arrangement has been made which will result in important assistance being given to the Soldiers' Settlement Board of Canada, in connection with the settlement of returned soldiers upon farms in Ontario. Representatives of the Board have had a number of conferences with the secretary of the Association. They have explained the workings of the Board and asked the Association to assist by furnishing lumber to soldier settlers at the cost price, plus the actual cost of handling.

The proposal was laid before the directors of the Association and it was decided to ask each dealer in Ontario to express his own opinion regarding it and to co-operate if he so desired. Many replies to the association's circular have been received and others are coming in daily, all showing that the retail lumber dealers of Ontario are ready to do their best in the direction of assisting in getting those soldiers who desire to take up farming settled upon their land at the least possible expense. In a number of cases the dealers are stating the amount of discount from their list prices which they will give. The average is in the neighborhood of 10 per cent. In other cases no specified reduction is stated, but the lumber will be furnished at cost price plus the actual cost of handling.

The Soldiers' Settlement Board is taking every precaution to ensure that the soldiers are placed upon farms to the best possible advantage. Careful enquiry is being made into the fitness of soldiers who apply for farms, as to their farming ability. Those who have not had experience at farming are being given a course of actual farm training before being placed. Careful selection of farms is provided. Free farm land in Ontario is no longer available for the Dominion Government and it is purchasing farms in the settled districts.

Adequate loans to meet all the essential requirements of the soldier settlers are being made by the government upon terms which make it as easy as possible for the soldiers to repay out of the proceeds of the farm. Careful enquiry is being made also into the requirements of each settler, in the line of machinery, equipment and buildings. When the requirements of this nature have been passed upon by the Board, a requisition is given by the Board upon the nearest local dealer. The soldier, upon presentation of the requisition to the dealer, secures his material and receipts the requisition. The receipted requisition together with the bill is sent by the dealer to the Board and the latter pays the bill within 30 days. By this plan the soldier gets exactly what he requires. He runs no risk of making unnecessary purchases on account of lack of experience, and the dealer is certain of receiving payment for what he sells.

From a business point of view the dealers, although they make no profit upon the lumber supplied to the soldiers in connection with this plan, are assisting in a most important part of the work in establishing returned soldiers, and are bringing to their neighborhood a most desirable class of settlers who will enlarge their market for future business. The reduction in price, of course, applies only to the first requirements of the settlers, or whatever is required in order to set them up in an adequate manner for successful farming. Future requirements will be paid for at current market prices.

Arrangements are being made by the Board for the purchase of all the other requirements of the soldiers at cost, including such machinery and equipment as they may need. Arrangements are also being made in all the other provinces of Canada for assistance on similar lines. The Board has already received applications for farms from a large number of soldiers and is now engaged in settling about 500 in Ontario.

Spruce stand in New Brunswick containing trees up to 15 inches in diameter. Land burned in 1825 by great Miramichi fire upon which no returns were possible for at least eighty years

"Goodyear Get-together Meeting"

On Monday and Tuesday of last week the Goodyear Lumber Company of Buffalo, N.Y., had a meeting of their representatives at their Buffalo office, which was attended by G. A. Townsend, Sales Manager of the Great Southern Lumber Co., H. L. DeMuth, Manager, Goodyear Lumber Company's New Orleans office, and W. E. Farnan, Manager of their New York office; also, A. Booth of Albany, B. E. Fitzgerald, Reading; W. E. Sloan, Williamsville, N.Y., J. D. Stewart, Toronto, Canada, and A. J. Hartmann, Newark, N. J.

The Goodyear Company, in addition to having the exclusive sale of the Great Southern Lumber Co.'s stock in the East, has also acquired the output of the Moore Timber Company at Bay Harbor, Florida, and represent exclusively in this section the Dunlevie Lumber Company of Allenhurst, Ga.

The purpose of the meeting was to discuss conditions generally with a view to giving the trade the best possible service. The reports of the gentlemen referred to above were unanimous in that they all expect a continuance of the very heavy demand for lumber throughout the summer and fall. Inasmuch as the Goodyear Company is now specializing in yellow pine, having a splendidly diversified source of supply as indicated above, they believe that meetings of this kind are necessary in order to serve the trade's interests and they will be held quarterly hereafter. While business was the watchword, the social and recreative features were not by any means overlooked by President Ganson Depew and Vice-Presidents C. W. Goodyear and J. W. Trounce.

Will Steel Supplant Wood Ties?

Practical railroad builders and experts from the Bureau of Forestry, Washington, were called on to enlighten the House interstate commerce committee which is trying to find out whether steel could be substituted for wooden cross ties, in use since the first roads were operated. They were called to testify at a hearing on a resolution by Representative Dyer, Republican, Missouri, providing for an investigation by the committee as to the advisability of the plan.

Most Prolific Producing Species of Wood

White Spruce is Most Important for Pulp While Douglas Fir Leads in Lumbering—Ontario Has Most Hardwoods—What Different Provinces Possess

The woods most commonly used in pulp manufacture in Canada vary but slightly from year to year. The increased manufacture of sulphate, or kraft, pulp has enabled the manufacturers to use increasing proportions of jack pine. The use of balsam fir has increased steadily in past years. Hemlock is used to a greater extent than any other wood in British Columbia. In every other province but British Columbia, spruce heads the list of woods converted into pulp, says a recent bulletin issued by the Forestry Branch, Department of the Interior.

Spruce pulpwood in the Maritime Provinces is composed mostly of red spruce (*Picea rubra*), a tree the distribution of which is confined to this region in Canada. With this are mixed smaller quantities of white spruce (*Picea canadensis*) and black spruce (*Picea mariana*).

In Ontario and western Quebec the red spruce is almost unknown, and forms only a small part of the wood used in pulp manufacture. White spruce grows in Canada from the Atlantic to the Yukon, and is undoubtedly the most important pulp species in the forests of this country. It probably forms 90 per cent. of the spruce pulpwood cut in Ontario and Quebec. Smaller quantities of black spruce and red spruce are also cut. In British Columbia, the place of these three eastern spruces is taken by typical British Columbia species. The spruce pulpwood produced in this province at the present time is cut in the coast region, and is the wood of the Sitka spruce (*Picea sitchensis*). The Engelmann spruce of the Selkirk and the Rocky Mountains (*Picea Engelmanni*) is not utilized for this purpose (*Picea sitchensis*). The Englemann spruce of the Selkirk and the Rocky Mountains (*Picea Engelmanni*) is not utilized for this purpose at the present time, not because of its lack of satisfactory pulp-producing qualities, but simply because the pulp industry has not been developed in interior of British Columbia.

The Balsam Fir in East

In Eastern Canada only one species of balsam fir occurs, and this tree (*Abies balsamea*) forms the entire production of balsam fir pulpwood in Ontario, Quebec, New Brunswick, and Nova Scotia. In British Columbia the most commonly used balsam fir species are amabilis fir (*Abies amabilis*) and lowland fir (*Abies grandis*). In the interior of the province and on the Rocky Mountain slopes the common species is mountain fir (*Abies lasiocarpa*), which has a similar distribution to Engelmann spruce and, like it, is not used for pulp at the present time.

Eastern-hemlock (*Tsuga canadensis*) is not used extensively in the east for pulp manufacture, although it is reported from Ontario, Quebec, and Nova Scotia. The western species (*Tsuga heterophylla*) is the most important pulpwood in British Columbia at the present time, and forms almost half of the wood used in that province. It is said to be superior to the eastern species for pulpwood as well as for lumber and other products.

Jack pine (*Pinus Banksiana*) is used only in Quebec and Ontario, and only in the manufacture of sulphate or kraft pulp. Poplar is also used only in Quebec and Ontario, but is made into ground-wood pulp, sulphite, and kraft fibre. Two species are utilized, aspen poplar (*Populus tremuloides*) forming the greater part of the pulpwood consumed, and balsam poplar (*Populus balsamea*) being used in smaller quantities. Common cottonwood (*Populus deltoides*) and large-toothed aspen (*Populus grandidentata*) are probably also used occasionally. Pulp manufactured from the wood of the poplar species lacks the high tensile strength of that made from spruce, balsam fir, and other coniferous woods, and is used chiefly to give body to book and magazine paper. Mixed with a stronger, coarser pulp it fills in the interstices between the coarser fibres and makes the paper smooth and opaque.

In the same Forestry Branch bulletin is given an outline of tree species generally utilized for the manufacture of lumber. In part it is as follows:

"Canada's lumber-producing trees are largely softwoods. British Columbia cuts more softwood than Ontario, although its total production of lumber is less. In Quebec, the Maritime Provinces, and the Prairie Provinces the most important softwood is spruce. In Ontario white pine has always headed the list, and in British Columbia, Douglas fir.

Ontario Leads in Hardwoods

Ontario is the most important hardwood-producing province, cutting over twice as much as Quebec, which comes second on the

list. The other provinces in order of their importance as producers of hardwood are as follows: Nova Scotia, New Brunswick, British Columbia, Prince Edward Island, Manitoba, Alberta, and Saskatchewan. In Quebec and the three Maritime Provinces birch is the most important hardwood. In Ontario maple heads the list and in the three Prairie Provinces aspen poplar. Cottonwood poplar is the most important deciduous-leaved tree in British Columbia.

"Hard" maple is cut from one tree only (*Acer saccharum*), "soft" maple lumber may be cut either from silver maple (*Acer saccharinum*) or red maple (*Acer rubrum*).

The ash is divided into two classes, the harder wood being that of the American ash (*Fraxinus americana*) and the softer material black ash (*Fraxinus nigra*). There are three elms in Quebec of commercial importance, white elm (*Ulmus americana*), rock elm (*Ulmus racemosa*), and red or slippery elm (*Ulmus fulva*).

Poplar in Quebec apart from aspen poplar may be either balm poplar (*Populus balsamifera*), large-toothed aspen (*Populus grandidentata*), or common cottonwood (*Populus deltoides*). In the reports received the aspen is usually the only one separated from the other poplars.

Red oak (*Quercus rubra*) is the most important oak species in Quebec in point of quantity of lumber produced, although the wood of the white oak (*Quercus alba*) is more valuable. There are other oak species of only minor importance.

There are four hickories that contribute to the supply of hickory lumber, but the wood of these is so closely related that they are seldom separated in the market.

The Greatest Lumber Producing Tree

Douglas fir, the most important single species of lumber-producing tree in Canada, is known botanically as *Pseudotsuga mucronata*.

The cedar in British Columbia is a different species from that of the eastern provinces. This is called western red cedar, or sometimes giant cedar (*Thuja plicata*).

The greater part of the spruce lumber sawn in British Columbia is cut from Engelmann spruce (*Picea Engelmanni*) and Sitka spruce (*Picea sitchensis*).

The black spruce of the East is fairly common in northern British Columbia and the eastern white spruce is also found in the province.

The tamarack of the province is usually called western larch (*Larix occidentalis*) and is a distinct Pacific coast species. Mountain larch (*Larix lyallii*), the Rocky Mountain species, is of little or no commercial importance. The British Columbia yellow pine is the wood of one species often called bull pine (*Pinus ponderosa*). The hemlock (*Tsuga heterophylla*), western white pine (*Pinus monticola*), black cottonwood (*Populus trichocarpa*), jack or lodgepole pine (*Pinus murrayana*), maple (*Acer macrophyllum*), birch (*Betula occidentalis*), yellow cypress (*Chamaecyparis nootkatensis*), and red alder (*Alnus oregona*) are all cut from single species, each a distinct western tree, differing from its eastern relatives. The balsam fir lumber is made up of wood from Alpine fir (*Abies lasiocarpa*) and Amabilis fir (*Abies Amabilis*) with perhaps a smaller quantity of lowland fir (*Abies grandis*).

Two Million Feet of Lumber in Arena

The largest arena ever constructed in modern times was erected by Tex Rickerd, in Toledo, Ohio, on the occasion of the heavy weight championship bout between Jess Willard and Jack Dempsey.

The structure was built entirely of lumber and required nearly 2,000,000 ft. The actual cost of material and labor on the huge building was \$150,000, and yet when tenders were asked for the demolition of the arena the highest bid was from the American Housewrecking Co., of Chicago, their figure being \$25,000. The immense edifice, which was intended to seat 97,000 persons and yet on the only occasion on which it was used it was less than one-quarter filled. This means that had the promoters of the great fistic contest known in advance of the comparatively limited number who would be present at "the attraction" they could have erected a building sufficiently large to accommodate all with half a million feet of lumber instead of using four times this quantity.

Why Forest Fires Endanger the Northland

Frame Houses of Settlers Invite the Flames—Fire Wardens Cannot Wipe Out the Peril—Precautions That Would Prove Effective

Wm. Henderson, of Toronto, superintendent of the Shantymen's Christian Association, for many years in the interest of the work of that organization, has travelled all through Northern Ontario. He has witnessed many forest fires and given close study to their cause and prevention, and on several occasions has presented the facts to the provincial authorities. Mr. Henderson states that most of the houses in the Northland invite the fiend and that until all slash is burned and wide clearings made around the various homes that settlers will be in constant peril whenever there is a dry summer, the same as they have had this season.

Writing on the recent outbreak of flames in the bush, when several settlers in Northern Ontario lost their homes and a holocaust similar to that of the summer of 1916 was prevented only by the timely descent of heavy rains which extinguished the menacing embers, Mr. Henderson presents some pertinent and logical truths in the subjoined sketch:

"This is a nice little home you have," I exclaimed as I walked into a small cottage west of Cochrane, where a young couple with baby were living.

"Well, it's good enough to burn," was the young man's reply.

Wm. Henderson, Toronto, Ont.

"You see," he continued, "all this country will be burnt over twice before it is cleared, so there is no use spending too much on a house."

"What about the wife and baby when the fire comes?" I enquired.

"Oh, the river is only about 100 yards away and they would be quite safe under the bridge," was the answer.

"Indeed," chimed in the wife, "you won't find me here when the dry season comes, as I'll go to town."

For miles into the forest away from the river settlers were putting up their little shacks to secure the 80 acres of land on easy terms being offered by a land company, by arrangement with the Ontario Government.

This company guaranteed work for the men in their mills and camps, and employed them to cut down and utilize all the marketable timber, and these homes were being built surrounded by the slash made in these operations.

As Safe as in Powder Factory

Most of the settlers were French or foreign with large families of small children, and in a dry, hot summer like the present they would be as safe living in a powder factory as amongst this dry spruce, slash and timber.

In conversation with the doctor of the settlement he remarked: "It seems almost criminal to put families into these conditions." "It is not 'almost,' but quite criminal," was my response.

In other Northern districts that are open for homesteading the chief inducement to take up the land is the revenue to be derived by cutting and selling the pulpwood on it, and this brings in the French-Canadians by the hundred. They are good bush men, and do well as

long as the wood lasts, but have not much idea of real farming, so the hot summer weather finds them away from home working in some saw mill or construction camp, while wife and children live by themselves among the stumps.

Possibly there is an acre of ground with a few potatoes and garden stuff round the house, but this is no protection at all when the bush fire comes along with a sixty mile an hour wind, carrying flame and blazing embers before it. The fire of 1916 jumped the Abitibi river, which is a wide stream, as if it were only a ditch in its path. In the Porcupine fire the flames licked the surface of the lake for many yards, killing many who were seeking safety in its waters.

For the benefit of those unacquainted with conditions it may be well to explain just what happens, and this will best be done by telling what did occur in 1911 and 1916.

When the fire occurred in 1911, all the country surrounding Porcupine, Cochrane, Matheson and adjacent settlements was covered by green brush with slashes here and there to start the fires.

Through all this great territory the fire ran and towns were burnt and scores of lives lost.

For five years this whole country was a wilderness of dry, dead trees with a heavy undergrowth of fire weed and similar ideal fodder for the flames.

In the winter of 1913-1914 I travelled all through that country. At this time all round Porquis Junction and Iroquois Falls and most of the country between there and Cochrane was still green bush, and the new print mills with the local market thus open for pulp wood had led settlers to take up every available homestead near the railroad. Their little shacks in the clearings were everywhere, and all in close proximity to the standing timber.

One Wilderness of Burnt Trees

I walked one day from Matheson to a camp on the Abitibi river some 26 miles east. Until I came within eight miles of the river there was nothing but a wilderness of burnt trees. Among these trees up to about ten miles from Matheson were the little homes of the settlers, in some cases quite close together, but none far from the burnt timber, getting drier year by year, and with each years added undergrowth to make it the more dangerous.

When the great fire of 1916 occurred it was in this district that had been previously burnt over that it raged fiercest, and where most lives were lost, in all about 300.

A great many of the settlers in all this district were young Englishmen, and when war broke out in 1914 nearly all left their homesteads and enlisted. When they went overseas the wives of such as were married followed them. Consequently the names of few English were found among the victims of the fire.

All through the green bush already referred to round Porquois, etc., this fire went, and it has been standing since then awaiting such a summer as we are now having to jeopardize the lives of such as have rebuilt the homes burnt down in 1916 or taken up new homesteads since. I might explain that lots of this timber, being only blackened outside, was still valuable as pulpwood, and many thousands of cords in these past three years have been cut and sold at good prices, thus making a good living for the settlers.

Why Fire Wardens are Helpless

It is simply folly to think that these fires can be prevented by any number of fire wardens in the summer time. Unless the slash is burnt every winter and wide clearings made round the various homes, settlers in the forest will be in constant peril whenever a dry summer occurs.

Very many miles have been cleared by the fires, but most of it is growing up again for want of settlement in it.

After the 1916 fire the land for miles round Mathieson was so well cleared that one man single-handed could clear an acre a day and have it ready for the plough.

The early frosts prove the enemy of most field crops and in view of the history of the past three years it is not to be wondered at that there is no great rush of farmers into some new district. The one sure crop, (until the fire comes) is the pulpwood and consequently the settlers will naturally take up the lots in the bush with all the risks entailed by living there instead of the fine cleared lands that the fire has already travelled over.

What Forest Conservation Really Implies

Unless Different Handling of the Timber of Canada is Resorted to its Exhaustion Will Make Direct Taxation Necessary, Declares Dr. Fernow

There has been a mischievous story afloat about the "unlimited and inexhaustible" timber supply of the Dominion of Canada, and public men who ought to have known better have repeated it. It is mischievous because it insures wasteful use and delays the rational, conservative management of the forest resources with regard to future needs. Our knowledge of probable supplies, to be sure, is for much of the forest area, still mere guess work, but it is sufficiently well based to enable us to see that an end is in sight, says Dr. B. E. Fernow, Dean of the Faculty of Forestry, University of Toronto.

The easiest way to make one realize the exhaustibility of the timber ready for the axe in Canada is to state that the present sawmill capacity of the United States would suffice to dispose of it in less than a decade, and that, according to the best information, the timber supply of the States is about four times that of the Dominion.

Since the forest resource is looked to, to play a not insignificant role in the reconstruction of the Dominion's world trade, it is indicated to analyze the situation.

The commercial timber of Canada is found in two widely separated regions: the eastern forest and that of British Columbia. In the case of the latter the merchantable stand has been estimated recently by the Commission of Conservation on the basis of an exhaustive survey at 360,000 million feet, and enough is known to place the eastern stand at considerably less.

It is not usually recognized that the forests stand second as a basis for our manufacturing industries, that the annual value of our forest products equals that of our wheat crop, and that our forest industries supply around 15 per cent. of our foreign trade and an equal percentage of railway traffic. It is evident that the handling of such a resource is a matter of high economic importance.

Spruce White Pine and Fir Lead

The sawmill lumber cut alone for the Dominion has reached as high as 5,000 million feet annually, and for the last decade has averaged over 4,000 million feet, worth around 60 million dollars at the mill. An analysis of the figures brings out the fact that spruce, white pine and Douglas fir make up three-fourths of the annual lumber cut of the Dominion; this comes in the sequence of their output from the forests of Ontario, British Columbia, Quebec and New Brunswick, which provinces, indeed, furnish some 90 per cent. of all our lumber. Our interest accordingly in general narrows down to a consideration of the white pine forests of Ontario and Quebec, the spruce forests of Quebec and New Brunswick, and the Douglas fir forests of British Columbia.

Turning our attention to eastern Canada alone, we may give a few figures to indicate the place of its forests in the economic life of this section. To begin with, there are some 30,000 men of the eastern provinces who gain a livelihood in the operations between the tree and mill. There are over 3,000 mills engaged in converting the logs into lath, lumber, shingles, staves, etc. These mills, according to 1911 census, represented a capital of over \$96,000,000, and employed over 58,000 men, whose earnings amounted to around \$18,000,000. The wood-using industries in eastern Canada number over 3,000 firms, which require roughly 2,000 million feet of raw material annually, and since this is largely of domestic origin, the industries are doubly important. While these industries could exist on imported wood material, the logging and milling industries mentioned above must pass with the exhaustion of the forest.

The pulpwood industry in the east has become of growing importance of late years, due in some measure to the waning supply in the northeastern states. The home consumption of pulpwood has risen from 480,000 cords in 1908, valued at around \$3,000,000, to 1,765,000, cords in 1916, valued at over \$13,000,000. In addition, in that year 1,000,000 cords were exported, valued at nearly \$7,000,000. The pulpwood manufactured into pulp in home mills has been above 1,000,000 cords annually the past six years, and has exceeded the cordage exported in the raw state since 1913. Some fifty mills are concerned, and over 85 per cent. of the consumption is in Ontario and Quebec.

What Forests Typify and Signify

Enough has been said to indicate that the eastern forests are of very great economic importance, especially so when we bear in mind that these forests are very largely found on non-agricultural lands, and that these lands comprise from two-thirds to three-quarters of the provincial areas. They mean the livelihood of many thousands

of men, the *raison d'être* of several thousand mills and wood factories together with various subsidiary industries, to say nothing of the direct provincial revenues, which aggregate some four million dollars annually. Every business man in eastern Canada is directly interested in the maintenance of such a prosperous state of affairs, and in the question of whether this great resource is handled in the most intelligent way. Every citizen is interested with his own pocket as to whether this forest resource is going to continue in furnishing revenue or whether its exhaustion will make direct taxation a necessity. To all appearances, unless different handling of the timber is resorted to soon, such necessity will arise in not a distant time.

The economic importance to Canada of her great forest areas is no less apparent. The value of our primary forest products exported from the country during the past year totalled some \$200,000,000. The pulp and paper industry export products valued at some \$85,000,000 annually. The importance of perpetuating a resource that assists so largely in redressing our unfavorable trade balance can scarcely be over-emphasized.

The first and most vitally necessary step toward handling our forests as crops, rather than mines, is, of course, the prevention of fires. Great progress has been made in this direction during recent years, though much still remains to be accomplished.

The next step should be the adoption and strict enforcement of improved cutting regulations in connection with all logging operations on crown lands. The situation in this respect is least satisfactory in the Province of Ontario and on Dominion licensed timber lands in the west.

Good Salesmanship in Lumber Yard

A customer dropped into a certain retail lumber office one day and told the dealers that he wanted some 12-foot and 16-foot drop siding, along with a little dimension, and some 1 x 4 flooring 12 feet long.

The dealer had the material in the lengths specified, but he also had a good assortment of short length stock which he wanted to sell where it could be worked to advantage. He knew that his short cut stock graded a little better than the standard lengths and that the customer would be getting better stock if he would take the short stuff.

So he asked what the lumber was to be used for. The customer said he wanted to build a small out-house. He gave the dimensions of the building. The dealer took him out in the yard and showed him the short stock.

"Why, I didn't know you had that short stuff. Sure, I'll take it. It looks good to me."

This incident is one of real lumber yard salesmanship. Some dealers never let a bit of lumber go out of their yards without learning what it is to be used for. Others hesitate to ask. Occasionally a customer may show a little resentment if the dealer begins questioning him, in which case the dealer can say: "My only purpose in asking these questions is to help you get the kind of lumber that will give you the best results." Usually that statement removes the customer's objection to telling what he is going to build.

By following these lines lumber dealers will soon educate their customers to accept advice and suggestions, with the result that the dealers will be in a position to give better service, and at the same time strengthen their own position as authorities on all matters relating to building.

That lumber dealers, or building material merchants should be generally recognized as reliable building authorities, is the idea put forth by the Retail Lumberman years ago, at a time when dealers seemed perfectly satisfied to let the public get its help from carpenters. We have kept up our work in this connection and today the lumber dealers pretty generally recognize the logic of our position, and are rapidly educating the public to the same view. The time will come when prospective builders will instinctively go to the building material merchants first for building advice and helps of all kinds, and the dealers will then be better able to develop new business and promote building, thus providing work for the carpenters that otherwise might never develop, or at the best would be long deferred.

Lumber yard salesmanship is a very important matter, and one that dealers are giving more attention to now than formerly.

Lumbermen Would Welcome Inquiry

The Calgary Contractors' Association at its annual meeting, sent a wire to Sir Robert Borden, urging that a prompt and thorough investigation be held into the prices of lumber charged by the British Columbia Manufacturers' Association. The Calgary contractors charge that there is profiteering, and that Canadian consumers are discriminated against, while American buyers are favored. As a result, they claim, industrial discontent is being increased, work in Western Canada is being held up and business is badly handicapped.

"We shall welcome the fullest and most reaching investigation into the affairs of the mills comprised in the Mountain Lumber Manufacturers' Association," said H. H. Ross, president of the association.

"The Mountain Lumber Manufacturers' Association wants the whole truth known," Mr. Ross added, "and with the facts before the public and before the Government we shall have no apprehension as to the verdict respecting our profits."

Mr. Ross said that the British Columbia mills had lost money for the last ten years, and some had gone into liquidation, for example the Fernie Lumber Company, with liabilities of \$200,000.

Respecting the charge that the British Columbia Lumber Manufacturers were discriminating against the prairie consumers, Mr. Ross declared that it was untrue.

When an explanation of the Calgary despatch was asked from R. H. H. Alexander, secretary of the British Columbia Lumbermen's Association, Mr. Alexander said: "Hot air; nothing but hot air. Why the prairie market fell down on us and the vast orders which were promising early in the season failed to mature. Practically all the Albertan market is filled from the mountain lumber division, but there have been no orders worth while recently from Alberta. When they talk of lumber being expensive they are ignorant of the market because the American market is as high as \$10 per thousand over us now. As for profiteering," said Mr. Alexander, "why these people must realize that when labor and all other commodities go up it naturally raises the cost of producing lumber."

Several lumbermen expressed the opinion that they did not consider it good business to sell lumber in Canada at \$10 per thousand and cheaper than they can market it for on the U. S. side of the boundary. One man said: "We are out for business and all things being equal Canada will get the lumber, but when Washington lumber buyers offer \$10 per thousand more than Canada then we sell to Washington."

Stumpage Rates are Increased

Notification is given in the Royal Gazette, of New Brunswick, of an increase in the rates on practically all softwood saw logs cut on the crown lands of New Brunswick.

The increase is approximately one-third and will be effective from Aug 15th next, thus being operative before next season's cutting operations.

The new rates are published in connection with a long state-

ment of regulations under which licensees of Crown Timber Lands shall operate. Spruce, pine, hemlock and cedar logs will pay \$3.50 instead of \$2.50, while hemlock, fir and poplar logs will pay \$3 instead of \$2 stumpage. Other classes of lumber are not affected.

Whalen Company Elects New Directors

Announcement was made recently of the addition of three new directors to the board of the Whalen Pulp and Paper Mills, Limited, Vancouver, of which company Sir George Bury recently assumed the presidency. The three new members of the board are W. N. Harlbut, of Dayton, Ohio; Alexander Smith, of Chicago; and I. W. Killam, of this city.

Mr. Harlbut is connected with the George H. Mead Company, of Dayton, Ohio, and was for many years associated with the Backus paper interests. He has in recent years been prominent in the affairs of the Spanish River Pulp and Paper Company, working with George H. Mead, president of that company.

Mr. Smith is president of the well-known financial house of Peabody, Houghteling and Company, of Chicago, who is well and favorably known in Canada.

Mr. Killam, who is president of the Royal Securities Corporation, has taken an active part in the organization and financing of other important pulp and paper enterprises.

General Survey of Lumber Activity

The "Labor Gazette" of Ottawa in its last edition in referring to general lumbering conditions in Canada, says: Westville reported great activity in the lumber mills. Charlottetown reported that the industry had a very quiet month. Fredericton reported that the mills were in full operation and gave employment to a large number of men. Quebec reported that river driving was in full swing under favorable conditions, but that the mills had not yet started the season's cut. Sherbrooke reported that river drivers were well employed and that saw and shingle mills were busy. Three Rivers reported that the St. Maurice Lumber Co. were preparing their mill for the season. Ottawa reported that the sawmills ran about ten days in May only, the high water closing them down, but that as soon as the water permitted they would again run at full capacity. Fernie reported that in every section of the district there was remarkable stimulation of the lumber market and that operators were finding it exceedingly difficult to fill the orders placed, the unfavorable winter and late spring and high water conditions having retarded progress. Vancouver reported that the saw and shingle mills were busy. New Westminster reported that all the sawmills in the district were running and that many of the shingle mills were working double shifts. Victoria reported that the lumbering and logging industry was fairly active with indications of improvement in the near future. Nanaimo reported that the logging camps of the district were working steadily and that the sawmills were also operating normally.

A yard of spruce logs on Sevogle River, in New Brunswick, containing 148 pieces. It takes about twenty of these logs to scale 1000 ft. board measure, N. B. rule.

Why Some Men Never Make Business "Go"

Contributing Factors Which Undermine the Foundation of Lumber and Other Undertakings—Analysis of the Various Causes

Why do men fail in business—not only in the retail lumber business, but in all other lines? Various reasons are presented and attempts have been made to analyze and group the causes. The six principal factors given are:

1. Lack of skill, which includes unpreparedness for the business; inefficiency, inaptitude, and the general subject of buying and selling.

2. Lack of capital.

3. Over-extension.

4. Unwise credits.

5. Speculation.

6. Dishonesty.

One recognized writer does not agree at all with this summary and declares that fundamentally the failures of most merchants are due to overstocking, inefficient and indifferent service, inability or indisposition to figure profits properly, senseless price slashing and lack of backbone and foresight.

Another authority asserts that many reverses have been contributed to by not advertising. Bradstreets is a great commercial agency, and recently compiled, after thorough investigation—not hearsay or guess work—a table showing that eighty-four per cent. of the business failures during the past year occurred among firms which did no advertising. The information was gathered by this well-known commercial agency at a considerable outlay of time and money, and the statement is worthy of careful deduction. One does not mean to infer that had these eighty-four per cent. of merchants, who went down in the business' race spent money in publicity plans, they would have succeeded and been in a flourishing state today, but, nevertheless, the lesson to be drawn from the statistics presented is obvious.

A Recapitulation of Defects

Here again is the sextette of causes given in their order of precedence in contributing to business skill, lack of capital, over-extension, unwise credits, speculation and dishonesty. A writer in "System" says there are a few other causes, such as bad habits, and personal extravagance, but more often than not these grow out of a lack of skill; few failures are, in the last analysis found to be due to either of these frequently assigned reasons.

Every failure due to the causes which I have enumerated is preventable. Even "dry rot," which catches more creditors than any other kind of failure, may be discovered by the wary. I know one large wholesale house which had been a leader in business for three-quarters of a century; successive generations had come and gone with ample fortunes. It was a Rock-of-Gibraltar sort of concern; bank officers accompanied the partners out to the steps when they called for accommodations. They had started business in the days when the request for a financial statement by a bank or mercantile agency was considered impertinent and meddlesome. No one had the hardihood to ask them for a statement. Their affairs went on quietly and smoothly; customers received exactly the same consideration as the postal clerk gives to the man buying stamps; you might take or leave their goods without disturbing the even progress of their ways.

One morning the business world awoke to the conservative firm's failure for more than a million dollars. The accountants found affairs in a tangled mass; the members of the firm had not the slightest notion how much they owed; they had goods to the inventory value of several million dollars, but the goods were old-fashioned and unsalable—they brought less than a hundred thousand dollars.

The public was informed that the shifting of business from the firm's location, together with a failing demand for the character of goods carried by the house, had brought about the bankruptcy. As a matter of fact, the firm had stood with its back to the progress of the world; the old members, who had bought and sold with shrewdness, had been succeeded by men who bought and sold by convention. The condition of the firm would have been apparent to any man who cannily watched operations without being blinded by the glories of the past. On a complete reorganization, with new buying and selling heads and a careful system of accounts, the firm paid all its debts within three years.

Look Well After Buying End

Lack of skill in buying is one of the most prolific causes of failure; too many concerns put all their stress on the selling end of

the game. Of course, a concern cannot make money unless it sells, but it does not take much of a salesman to dispose of goods which have been bought right and which therefore can be offered at the right price to the right market. No amount of selling skill will permanently cover up deficiencies in the buying department. And this principle applies just as truly to the individual who is buyer, salesman and bookkeeper all in one as it does to the million-dollar business.

Failures from lack of capital are really failures from lack of skill because the money and the business have not been kept in their proper relations, but the heading is such a large one that it deserves separate consideration.

Over-extension is closely related to lack of capital, but true over-extension is not so much an outdistancing of capital by business as it is an outdistancing of business by organization. A concern doing a good business starts new branches in districts where there is not enough business to support the branch. Often the house will not have sufficiently mastered system, and the skill which made the home office succeed is not transferred to the sub-office. Perhaps localities or transportation methods have not been sufficiently considered.

Very few men start in business with the idea of being dishonest. Dishonesty comes usually when the man is at bay and is usually suggested by someone outside. Then comes a succession of false statements, sharp dealing, and all the other unlovely practices of the crook.

Some concerns honestly enough add the increase in plant and realty values to their statements, on the supposition that the plant is worth what it will bring. Of course, that is the worth on liquidation—although plants rarely bring more than a fraction of their value as a going business and not in liquidation. A plant is generally worth what it can be mortgaged for, because that is the only sum of money which can be quickly raised for the purpose of business.

Ontario Retail Dealers' Summer Outing

The annual, midsummer, educational trip of the Ontario Retail Lumber Dealers' Association is being held from July 31st to August 4th to Penetanguishene, Midland, Victoria Harbor and Parry Sound. Some seventy-five members from all parts of the province are taking in the outing. This is the largest party of retail men, who have ever gone on a tour of the association and the busy lumber plants on the Georgian Bay will be visited. Preparations on an extensive scale have been made for the reception of the guests by all the forest products manufacturers of the Midland district and an enjoyable time is assured every one. There will be a sail to Honey Harbor on the afternoon of August 2nd. The majority of the company of yardmen intend going on the jaunt to Parry Sound where they will visit the mills in that town and incidentally do some fishing on Civic Holiday, August 4th. The excursionists left Toronto on the G. T. R. by private car on Friday afternoon, July 31st, and arrangements for the outing were most complete. A full report of the proceedings will appear in the next edition of the "Canada Lumberman."

All Furniture Prices Still Going Up

At a recent meeting of the furniture section of the Canadian Manufacturers' Association it was decided to increase furniture prices from 10 to 20 per cent. The larger increase will apply to pieces in which the mirror forms an important part. Increased cost of labor and materials is the reason given for this advance. As an instance, shellac which was selling three months ago at \$4.40 per gallon is now quoted at \$6.60, an advance of \$2.20. A pane of glass costing seven cents in 1914 increased to 37c during the war and is now quoted at 50c.

The Largest Spruce Log in the West

The largest spruce log ever brought out of the forest of Washington was carried from near Hoquiam on a 3½-ton Federal truck operated by the Spruce Division of the United States army. It measured 99 inches at butt, 86 inches at top and was 24 feet long. The log contained more than 13,000 feet of lumber and weighed over 39 tons.

If the truth were known, it is frequently the under dog that begins the fight; he started something he was not able to finish successfully.

Personal Paragraphs of Interest

L. Henderson, of James Davidson's Sons, Ottawa, was on a recent business visit to Montreal.

J. A. Culligan, the New Brunswick lumber manufacturer, was in Montreal on a business visit.

H. C. Campbell, of C. H. Russell, Montreal, has been on a business trip to Eastern Quebec.

Claude Villiers, of the Canadian General Lumber Co., Montreal, has been on a business trip to the Eastern States.

James Shearer, president of the James Shearer Co., Ltd., Montreal, has gone to the Laurentian Mountains, owing to illness.

J. B. Knox, of Knox Bros., Ltd., Montreal, has just returned from a trip to England. This is Mr. Knox's second visit this year.

Paul Day, treasurer of the Federal Lumber Co., Vancouver, was in Montreal, Quebec, Toronto and other cities recently on a business trip.

Guy Tombs, assistant freight manager of the Canadian Government Railways, Montreal, has been appointed transportation manager of the Canadian Export Paper Co., Ltd., Montreal.

John B. Reid, of Toronto, vice-president of the Ontario Retail Lumber Dealers' Association, has returned from a successful and enjoyable fishing trip in the vicinity of Bobcaygeon.

Ellwood Wilson, chief forester of the Laurentide Co., Grand Mere, P. Q., and Dr. Howe, of the Conservation Commission, Ottawa, attended a meeting of the Association of Eastern Foresters, at Mont Kineo.

Jas. D. McCormack, general manager of the Canadian Western Lumber Co., Fraser Mills, B. C., spent a short time in Toronto recently on his return from a visit to his boyhood home in Prince Edward Island.

F. C. Nunnick, an expert of the Conservation Commission, Ottawa, has been loaned to the New Brunswick Government to make an examination of the soil on the crown lands in that province. This will be Mr. Nunnick's third trip to New Brunswick.

The Wilson Lumber Co., Ltd., previously at the foot of Spadina Ave., Toronto, are situated in offices at 333a Confederation Life Bldg., Richmond St. E., with Mr. J. B. Meech as manager. Mr. Meech was formerly western representative of James G. Cain & Co., of Toronto.

Clarence Hyde and C. O. Maus, of the Hyde Lumber Co., South Bend, Ind., and Chas. Hyde, of Lake Providence, La., have been on an angling expedition in the Bruce Peninsula. The party met with splendid luck and are loud in their praises of the black bass fishing qualities of the Georgian Bay waters.

Edmund Hind, formerly with the Beaver Lumber Co., of Hamilton, has opened a retail yard on Gerrard St. E., Toronto, under the name of the Edmund Hind Lumber Co. Several lumbermen in Ontario are interested in the new enterprise which has been placed on a firm basis and has good prospects for developing a large trade.

Dr. C. D. Howe, Professor of Forestry at Toronto University, recently returned from New Brunswick. Dr. Howe has been collecting statistics on the annual growth of the forests of New Brunswick, spending part of his time on the Renous Survey about forty miles north of Boiestown. In company with Mr. G. H. Prince, chief forester of New Brunswick, he visited the limits of the Pejeboscot Lumber Co. in St. John County and also the limits of the Bathurst Lumber Co. on the Nipisiquit River. When Dr. Howe resumes his duties at the University next fall he will become Déan of the Forestry School succeeding Dr. Fernow who retired recently to take up forestry journalistic work in the United States.

John P. Mosher, buyer and travelling representative for L. N. Godfrey Co., wholesalers of lumber with offices in Boston, Mass., and New York City, is back again in the Maritime Provinces calling upon the lumber manufacturers with the purpose of making several good sized purchases for both immediate and future deliveries. This reputable lumber firm are looking for merchantable spruce in sizes 2 x 3 and up and also shingles, as well as hemlock boards in random or stock lengths. L. N. Godfrey Co. buy large amounts of Canadian lumber during the year and have various sources from which they regularly buy but the constantly increasing demand for spruce in the New England markets has compelled this firm to seek a more plentiful supply in the better lines of stock.

Lieut.-Col. John A. Cooper, of Toronto, who went overseas in command of the 198th Canadian Buffs, saw service in France, and later attained the position of transportation officer of the 5th Infantry Brigade, has gone to New York where he will have charge of the Publicity Bureau which is being opened by the Dominion Government. For some time past it has been felt that Canada's interest in the United States had reached the stage where it required careful and well organized attention. The new Bureau will furnish all the information relating to the progress and development of the Dominion

along commercial, industrial, financial and agricultural lines, and will be a permanent source of information for United States news agencies, publishers, etc. Col. Cooper is a past President of the Canadian Press Association and is widely known in newspaper ranks.

C. E. Huddert, of San Francisco, has been appointed manager of the Associated Timber Exporters of British Columbia. This association was formed to cover practically all export sales of British Columbia lumber. The majority of the large concerns have affiliated with the association and most of those who have not are working in close conjunction with it. Since its inception a few months ago the affairs of the association have been administered by R. H. H. Alexander, Secretary of the Lumber & Shingle Manufacturers' Association. In the interview Mr. Huddert stated that the shortage of tonnage which has stood in the way of big developments in the lumber industry will be overcome shortly through the release of ships from the Government service and expects that the next four or five years will see the largest volume of business transacted the world has ever known.

E. H. Boas, chief of the Forest Products Laboratories of the Forestry Department of Australia, was in Montreal recently and made a study of the pulp and paper trade, with special reference to the efforts being made to capture the European market. Mr. Boas was delegated by the Australian Government to look into forest products business all over the world. He has spent considerable time in the United States examining the methods of the industry there and while in Montreal evinced a great interest in the forest products laboratory of the McGill University. He stated that the Australian Government is making extensive plans to assist forest production and proposed to establish a modernly equipped forest laboratory. At present Australia is importing all her pulp and paper but the Australian Government has already undertaken the work of planting the vast sand areas with pulpwood trees.

J. E. Ray, Canadian Trade Commissioner in Manchester, England, was a visitor to Toronto recently. Mr. Ray is very optimistic as to the prospects before the Canadian woodworking industry. There is a marked shortage of woodenware of all kinds in Britain today and British manufacturers are very anxious to secure large quantities of Canadian wood products. As an instance, a Manchester firm asked him to inquire into the prospects of securing 2,000,000 blocks 2 in. square to be used for teaching children the alphabet. There is a marked demand for tool handles, washboards, tubs and wooden toys, including blocks, toy houses, wooden trains, cart wheels, checkers and chess sets. Mr. Ray states that the shortage of furniture is very marked and that stocks of doors, windows and building material are very low. In his opinion the markets of the Old Country are open to Canadian manufacturers for the next three or four years and after that competition will be keener and it will be a case of quality, service and price.

Death of Mr. Robert M. Cox

Many friends in the lumber industry will regret to learn of the death of Robert M. Cox, of Ottawa, Ont., who was at the head of the large exporting firm which bears his name. Mr. Cox was a pioneer lumber merchant of Liverpool, Eng., and Ottawa. He had attained the advanced age of 83 years and passed away at his residence, 381 Stewart St., in the Capital City. He was a prominent and highly respected figure in forest products circles in Ottawa and the Ottawa Valley for over half a century and enjoyed the confidence of his associates and numerous personal friends. The late Mr. Cox was a frequent visitor to England where his trade connections were extensive. Liverpool being the headquarters of his firm in the Old Land.

In the passing of Mr. Cox, who was born in England, an outstanding figure in the Canadian lumber arena has departed. He leaves a record of achievement and success, which should be an inspiration to many younger concerns and his firm developed a trade of large proportions and enviable prestige in foreign and local markets.

Mr. Alfred Mitchell Passes Away

Mr. Alfred Mitchell, one of the well known lumbermen of Powassan, Ont., passed away recently. Mr. Mitchell was born in Markham township sixty-six years ago, and came to Powassan when he was thirty years of age. During his stay there, he owned several saw mills in the neighborhood. Recently he had given all his attention to his sawmill in town, with which a sash and door factory and a planing mill are connected. He served efficiently at different times on the Township Council and the Town Council, and was at the time of his death a member of the School Board, and an elder in the Union Church. He has been ailing for several months, parts of which time he spent in Toronto, where he received special treatment. He returned home for a while, but went back to the General Hospital, where an operation was performed. He leaves a wife, one son and two daughters.

Why Western Lumber Prices are High

There is an Absolute Shortage and Yard Stocks Cannot be Sold Below Costs This Year

Hugh A. Rose, Toronto, Ont.

"In calling on retailers we find there is some criticism of Western manufacturers and wholesalers for not protecting and supplying the Eastern market with stocks, which owing to low prices existing in the past, Eastern retailers were induced to buy. Numerous articles have appeared in your publication and others regarding increased costs for logging and the manufacture of lumber, but these reasons do not appear sufficient to satisfy buyers that Western manufacturers are entitled to the present level of prices in order to make a profit on their operations," said Mr. Hugh A. Rose, of Toronto, representing Mason, Gordon & Co., in a recent interview with the "Canada Lumberman."

"Supply and demand really regulate prices, and at the present time there is an abnormal demand," continued Mr. Rose, "throughout the United States, and American buyers have come into the British Columbia market and have overbid Canadian wholesalers for all lines of stock, with the result that in spite of the fact that the Prairie markets are not taking their normal supply of lumber, there is an absolute shortage of all lines of stock at the mills in British Columbia and many of the mills are oversold for some weeks to come. This in itself is a justification of high prices, but one of our friends has put the matter up to us in another light."

"The sales manager of this mill says, that unless he can sell at prices equal to those paid by American buyers he is not doing justice to his principals, and points out, that prices this year are not averaging as high at the mill as last year. He gives the following figures as an illustration:

E. G. Decking, 100M per month at	\$70.00	\$ 7000.00
Ship Timbers, 400M per month at	40.00	16000.00
Jap. Flitches and large sqs., 100M per month at	55.00	5500.00
Balance cut to yard stock including uppers,		
1000M per month at	18.00	18000.00
Total 1600M. per month		\$46500.00
Average price	\$29.00 per month	

"This year up to the end of June their average selling price was \$26.000 or \$3.00 per M below last year, whereas the cost of manufacture has increased. This is accounted for by the fact that all the high average lumber sold last year is not in demand this year at all. Last year it was common knowledge yard stocks all sold away below cost, but the mill could still make money with the other stocks to offset the loss, but this year the tables have turned and yard stocks must at least carry themselves, which apparently the mills are not finding it difficult to do on account of the American demand," concluded Mr. Rose.

Newsy Happenings from the West

The Prince Albert Lumber Company, Prince Albert, Sask., of which A. L. Mattes is manager, have practically cut all their timber and disposed of their saw and planing mill. They expect that it will be moved west, but as to the location the company are unable at present to state. The Prince Albert Lumber Company have operated their plant at Prince Albert for some thirteen years, and the output has been all marketed in western Canada.

A syndicate of Eastern capitalists has acquired the Canadian Puget Sound Lumber Company's saw mill at Rock Bay, B.C., W. D. Connor, of Marshfield, Wis., is head of the newly formed corporation and the big plant will soon be in operation. The cut will be about 150,000 feet daily. The company has been completely reorganized with the capital placed at \$3,500,000. The officers are. President, Mr. W. D. Connor; secretary, Mr. George H. Reynolds; treasurer, Mr. H. A. Bly. The other directors are Mr. John W. Harrer and Mr. W. O. Langley.

The Pacific Coast Shippers Organization recently held a meeting at Portland, Oregon. Practically all the wholesale lumber dealers of Portland were in attendance as well as a large number from Seattle. It was decided to extend the organization of this association, more

particularly in its relation to the wholesale lumber business. Under the new plans the association will promote the interests of the wholesale lumbermen, as well as those of the industry as a whole. L. D. Carpenter of Seattle is the president.

The Redonda Island Timber Company, Limited, a company incorporated under the laws of the State of Delaware, recently registered to do business in British Columbia.

H. H. Stevens, one of the B. C. members of the Federal House stated, in an interview, recently that the Government would continue the construction of ships, but not on such a scale as during the last few years. He said that \$10,000,000 had recently been voted for additional vessels.

It is expected that the City Council of New Westminster, B.C., will shortly commence work on its housing programme. A workable scheme has been evolved and submitted to the Provincial Government and it is not anticipated there will be any further delay in carrying out this work. At present there are thirty applicants for loans and it is anticipated that this number will be increased as soon as construction commences.

The following companies were recently incorporated in B. C.: The Newton Logging Co., Limited, Vancouver, capital, \$15,000; the Miller-Grant Construction Co., Limited, Vancouver, capital, \$50,000; the Melrose Shingle Co., Limited, Crescent, B.C., capital \$50,000.

The Fullerton, Fawcett Lumber Co., Limited, Battle Lake, Alta., was recently granted a charter.

The partnership known as the Rowley, Bennett Lumber Co., Millet, Alta., has been dissolved and Mary A. Rowley and Victor C. Rowley, two of the partners, have registered as Rowley & Son.

Among the companies recently incorporated in Saskatchewan were the Aerial Service Co., Limited, Regina, Sask.; capital \$20,000; The Paskwegin Lumber Co., Limited, Paskwegin, Sask., capital \$20,000, and the Battleford Aviation Co., Limited, North Battleford, Sask.; capital \$10,000.

Canadian Western Cordage Co., Vancouver, B. C., are planning to erect a factory at New Westminster to manufacture wooden pulleys, binder twine, etc.

The City Council of Winnipeg is working on an extensive housing scheme. It was proposed to spend at least \$2,000,000 this year and the plan embraces the erection of between 3,000 and 4,000 houses. At a recent meeting it was urged that this work be undertaken at once so that no time may be lost and fullest advantage taken of the balance of the present building season. It is proposed to finance this scheme by collecting 10 per cent. of the total cost from the prospective purchasers and placing a mortgage for 60 per cent. with the regular mortgage on insurance companies and to finance a second mortgage of 30 per cent. with funds obtained from the Dominion, Provincial and Civic Governments and other sources.

The two vessels C-44 and C-39, which were built by the Northern Construction Co. for the French Government have successfully passed their tests and been accepted. These steamers are now at the Johnston Wharf, Vancouver, B.C., and will shortly commence loading lumber and spelter for the United Kingdom.

The manner in which British Columbia was able to respond to the call for airplane spruce has given an advertisement in the Old Country for the northern Sitka spruce that will have a marked effect on providing a future market in Great Britain for that wood, according to Mr. F. L. Buckley of the Masset Timber Company, who returned recently to Vancouver from a trip through England and Scotland. Mr. Buckley's company supplied the bulk of the spruce that was cut in this province to meet the demand for that wood for the construction of airplanes. "The quantity and quality of the light, strong and white northern grown spruce which was sent over to the Old Country from British Columbia has given that product a great reputation in Great Britain," said Mr. Buckley, "and I feel safe in predicting that the demand which has been created will be enlarged as new uses are found for a wood that is peculiarly adapted for a number of uses. Northern spruce from British Columbia will be called for carriage work, box manufacturing and other uses for which it is suitable, while it will of course remain sought after for airplane construction."

The International Coal & Coke Co., Limited, Coleman, Alta., were recently granted a Dominion charter. Wide powers have been conferred on this company. Among others to construct and operate steamers and vessels of all kinds and to build sawmills, wood-working factories, etc.; capital stock, \$3,000,000.

The Department of Labor, Ottawa, has been advised that the Commission named by the Minister of Labor to deal with the dispute between the Coghlan ship yards, Vancouver, and its employees, has brought about a satisfactory adjustment of the difficulty. Mr. Justice Murphy was Chairman of the Commission.

Record Sale of Ontario Timber Limits

High Prices Were Secured and There Were Numerous Tenders for all the Holdings Offered

The Ontario Department of Lands, Forests and Mines recently held a very successful sale of timber limits in several townships bordering principally on the Great Lakes. The returns are highly satisfactory and there was keen competition for a number of the concessions.

The successful tenderers for the respective limits, together with the prices for the timber, as bid, are:

Township	Per M. ft. B.M.
McCallum—J. B. Smith & Sons, Toronto	18.20 plus 2.00 dues.
Telfer—Manley Chew, Midland	15.50 plus 2.00 dues.
Kenny—J. R. Booth, Ottawa	17.50 plus 2.00 dues.
Charlton—J. B. Smith & Sons, Toronto	13.20 dues. 2.00 dues.
"C"—W. J. Bell, Sudbury	8.45 plus 2.00 dues.
MacLaren—Gillies Bros., Ltd., Braeside	9.57 plus 2.00 dues.
McConnell—Gillies Bros., Ltd., Braeside	11.29 plus 2.00 dues.
McNamara—Marshay Lumber Coy., Sudbury	14.65 plus 2.00 dues.
McNish—J. B. Smith & Sons, Toronto	18.20 plus 2.00 dues.
Sisk—Pierce Lumber Co., Timmins	20.57 plus 2.00 dues.
"U"—J. J. McFadden, Renfrew.	
\$2.50 per M. Ft. B.M. plus \$2.00 dues for pine including Jackpine and spruce.	
15c per tie plus 5c dues.	
40c per cord for spruce pulpwood plus 40c dues.	
25c per cord for other pulpwood plus 20c dues.	
5c per cedar post plus 1c dues, and the following rates on cedar poles, namely:	
30 ft. and less in length, 30c plus 15c dues each.	
31 ft. to 40 ft. in length, 50c plus 25c dues each.	
41 ft. to 50 ft. in length, 80c plus 50c dues each.	
51 ft. and over, \$1.25 plus \$1.00 dues each.	

Townships of Groves and St. Louis

Spanish River Pulp & Paper Mills, Ltd., Sault Ste. Marie.

On Red and White Pine \$5 per M. ft B.M. plus \$2 dues, or \$7 per M. Ft. B.M.
On Jackpine, \$4 plus \$2 per M. ft. B.M., or \$6 per M. ft. B.M.
On Ties, 10c per tie, plus 5c dues, or 12c per tie.
On Spruce Pulpwood, 40c per cord, plus 40c dues, or 80c per cord.
On other pulpwood, 40c. per cord, plus 20c dues, or 60c per cord.
On Cedar posts, 3c per post, plus 1c dues, or 4c per post.
On Poles:
30 ft. & less in length, 27c plus 15c dues, or 42c per pole.
31 ft. to 40 ft. in length, 47c plus 25c dues, or 72c per pole.
41 ft. to 50 ft. in length, 85c plus 50c dues, or \$1.35 per pole.
51 ft. & over in length, \$1.50 plus \$1 dues or \$2.50 per pole.

Budget of Briefs from the East

A forest fire broke out a few days ago in timber lands in York County, N. B. It was discovered by men in the vicinity and later an alarm was sent out from one of the towers of the Department of Lands and Mines and crews were rushed to the scene to combat the flames. Latest reports were to the affect that the fire was under control.

An expedition which marks a new era in commercial flying, left Annapolis Royal, N. S., recently for Labrador, under command of Captain Dan Owen, late of the Royal Air Force. The expedition is being sent out by the Belle Isle Straits Lumber & Pulp Company, Ltd., of Canada. The purpose of the expedition is to explore and survey 2,400 square miles of forest lands by airplanes. The whole future of lumber surveys by airplanes rests on the result of this expedition, which is being watched with interest all over the country.

Export figures of lumber shipments to the United States showed a falling off in comparison with the same period in 1918. The figures compiled show shipments from St. John, N. B., for three months ending June 30, as follows:

Laths: 10,500 m., \$35,473.81.
Lumber: 3,527 m. feet, \$122,742.48.
Pulpwood: 5,614 cords, \$54,248.72.
Wood pulp: 3,980 m. lbs. \$241,305.18.
Shingles: 111 m. \$699.35.
Staves: 4,160 bundles, \$3,131.66.
Spruce piling: 2,805 pieces, \$6,944.
Total, \$464,545.20.

Exports of lumber for three months ending June 30, 1918, were: \$966,281.47.

Lumber shipments from the province are heavy. Daily schooners and steamers are carrying large quantities to the United King-

dom and the situation, so trying in the spring, is greatly relieved. Sailing vessels of all kinds are being chartered to carry lumber overseas.

Three Hollanders, Messrs. Pauw, Trip and Ponnis, were in St. John recently en route to British Columbia. They are representing a large lumber firm in Holland, which has been in business more than 300 years, and which is known as the William Pont Timber Trading Co., Ltd., of Saandam, Holland. In conversation with a representative of the "Canada Lumberman" they said they had come to Canada in order to get an insight into the lumber industry of this country and to ascertain how conditions were in the lumber trade here. They said they planned on purchasing large quantities for shipment to their firm. They also declared that there is a great demand for lumber, not only in their own country, but also in France and Belgium and if they could get the kind they wanted they would supply these countries through their firm in Holland.

Taking Advantage of Cash Discounts

A large wholesale firm in a progressive city in New York State who deal in building materials furnish some illuminating facts in the matter of always "taking the discounts" on purchases. Here is their important announcement which is worth reading carefully and pondering well.

The merchant who fails to take advantage of cash discount on bills is missing an opportunity to increase his yearly profits materially. Is it not better to borrow the necessary funds at your bank at 6 per cent. interest annually and save the cash discount that amounts to sometimes over 36 per cent annually? As an example: Jones purchases \$100.00 worth of goods and receives a bill thereof allowing 2 per cent discount if paid within 10 days. Jones is careless and waits 30 days and pays \$100.00. If Jones was wise he would go to his bank and borrow \$100.00 on his note for 30 days. He would deduct 2 per cent discount remitting \$98.00. At the end of 30 days he would pay the bank \$100.50. He has saved \$1.50, or enough to pay the interest on \$100.00 for three months.

2 per cent. cash discount, net 60 days, means over 14 per cent. per annum.

5 per cent cash discount, net 60 days, means over 36 per cent. per annum.

Do you make the above profits on the sale of your goods. Think it over.

Stand of Timber in B. C. Province

The stand of timber in British Columbia is estimated to be as follows:

Species.	Total.	
	Million b.f.	Per cent.
Western red cedar	77,968	22.2
Douglas fir	75,973	21.2
Spruce (all species)	73,064	20.8
Western hemlock	64,112	18.3
White fir (balsam)	32,953	9.4
Lodgepole pine	11,861	3.4
Western yellow pine	4,208	1.2
Yellow cypress	4,056	1.1
Western larch	3,152	.9
Western white pine	2,700	.8
Cottonwood	788	.2
Total saw material	350,835	
Piling, poles, pulpwood, etc	15,465	
Total forest resources	366,300	

Forest Fires in Western Canada

The municipality of West Point Grey, a suburb of Vancouver, B. C., was threatened by a bush fire which broke out in the surrounding timber. At one point, twelve or fifteen houses were in danger, the nearest being a mere half block from the fire. The Point Grey fire brigade assisted by a detachment from the Vancouver force and a large number of citizens, succeeding in extinguishing the blaze. About 500 acres were burned over.

A number of fires are reported in the Nelson district. In the Salmon River Valley a large fire trapped three men in a tunnel at the second relief mine near Erie. It is known that the men have enough provisions to last for three or four days and it is thought that they are safe, although there is the danger that they may be suffocated.

Slocan City, about 25 miles from Nelson, is completely surrounded by fires. Fire hose have been stretched to all outlying sections of the town in an attempt to save the city. Fire rangers in this district say that the fires are due to the spontaneous combustion of the gases generated, by the heat, from the resin in the trees.

Yardman Should Give Good Service

Should Never Resort to Price Cutting Which is Confession of Inefficient Salesmanship

Mr. Retail Lumberman, do things in the community that will get you talked about. I do not mean eccentric things. You do not have to wear your coat wrong side out, or go bare foot in the winter time. Remember always that you are working for yourself, even though you may be managing the business of another. If you keep this in mind your course of action will be the same as though you owned the business yourself and were ambitious to go to the top of the ladder, says one who has given the subject of publicity for the retail lumberman much thought and attention.

So, it is a good idea to at least be in the front rank of those who are boosting for the community—if not at the top.

Some dealers make a practice of giving away souvenirs. If this is done indiscriminately, it is of doubtful value as an advertisement. In giving souvenirs it is well to have them of a useful sort, and it is also well to do it in a manner which will make them appreciated. Souvenirs of any kind cost money, and giving them away is a charge against the cost of operation. It is also true that people attach less value to something that does not cost them anything. Some such plan as giving a souvenir to every cash customer, or to every customer who meets his obligations promptly, will have the effect of making collections easier, particularly if the souvenir is of some value, and useful.

An exception to this rule may be made in relation to the young people—the children of the community. Most children are “pleased with a whistle and tickled with a straw.” So, it is not necessary to give them expensive presents; but it is necessary to give them something they want. It has often been said that “the children of today are the customers of tomorrow,” and it pays to cultivate them and gain their good will. They will have an influence with their parents, too, and if they hear the old people talking about buying building material, or building something, they will probably get in a good word for the dealer who has done them a favor.

I will not attempt to go into all the details of the publicity part of the selling plan. Not everything is suitable in every community, and the dealer must be his own guide. He must depend on his own ingenuity and perception.

In many lines of business “bargain sales” are common, but I do not think that they are a legitimate part of the selling plan for staple building material. Neither is price cutting. A general merchandise store can offer goods at a bargain for a week and then go back to the old prices, and nothing is thought of it. The goods they offer at such sales are usually slow moving stock or an accumulation from over-stocking. To that extent, a lumber dealer can offer bargains, provided he makes it definitely plain that he is offering an accumulation of “dead” stock.

But if he offers bargains for a week on a regular staple merchandise, he is laying up trouble for the future. He creates the impression that his regular prices are too high, and he will find that the customer who has bought at a low price will be mighty hard to sell to at a higher price. Other customers who did not take advantage of the “sale” will hear about it, for such news travels fast in a small community, and will expect to buy as cheaply.

Price-cutting to get competitive business is foolish—and unnecessary. In the first place it is a confession of poor salesmanship. Good salesmanship does not necessarily mean ability to get prices that represent more than the worth of the goods sold. Good salesmanship is the selling of things that give the buyer so much satisfaction that he does not remember what he paid for them.

A man may buy a two-dollar watch that either loses or gains a half an hour a week, but he never brags of it. He may say, “Well, I only paid two dollars for it.” But if he pays a hundred dollars for a watch that does not vary a minute a month from being accurate, he will be proud of it, and will never regret the hundred dollars.

Cheap goods will not give service, and the man who is a constant price-cutter will avoid loss by delivering poor quality. He has got to do this, or go broke. The ability to guarantee what you sell, with the knowledge that it will give the service desired, makes the seller respect himself, and creates respect in the mind of the buyer.

This does not mean that you should try to sell every customer building material that is better than he requires for his purpose; but it does mean that you must not sell him material that will not give the service desired.

The farther you can get away from talking prices, and the more you can impress the customer with the service he is to get from what he buys, the larger will be your volume of trade—and your profits.

The Lobstick Lumber Co., Limited, Edmonton, Alta., was recently incorporated.

Camp Fires are Forest Destroyers

In almost every part of Canada, the camp fire of picnic and fishing parties continues to destroy more of public-owned timber than could be grown by the planting of scores of millions of trees, says a recent leaflet issued by the Canadian Forestry Association.

From every direction comes urgent suggestions that governments start to re-plant the waste forest areas. This procedure may profitably apply to certain sections of Canada. The main consideration, however, is to stop the destruction of timber requiring a century to grow. Planting is a highly expensive alternative to fire prevention. If camp fires were invariably extinguished, there would be less need for asking the public treasury to assume the cost of rebuilding the forests by the use of millions of seedlings. Camp fires in Canada have stolen more public wealth than would have transported the guilty campers around the world on a luxurious free trip. Veteran woodsmen always build their fires small and build them in a safe spot, such as along a rocky shore or on a gravel or sand base, never among leaves or against a log.

Why are Wooden Labels Imported?

We have recently published reports, says the “Weekly Bulletin” of Ottawa, from the Canadian Trade Commissioners in the United Kingdom to the effect that there is a great demand for woodenware in the United Kingdom and great opportunities for Canadian manufacturers of wooden articles to secure trade in that market. In connection with this we have received a letter from a well-known Canadian scientific man in which he points out that wooden labels for plants used by florists and sticks for the support of rose bushes are imported into Canada from the United Kingdom. He wonders that these articles are not made in Canada.

The “Movie” as Sawmill Benefactor

There probably is not a grown man today who cannot recall the day of the tramp actor—the artist of the canvas wagon and the town hall, attempting in grotesque manner to portray the greatness and the grandeur of life. His acting was a travesty, his talent was a vacuum, his getting money for his work was a crime. Yet from coast to coast, and from the sawmills of the cold North to the logging camps of the balmy South, the advent of these burlesques on human existence was a call for man, woman and child to dig out their quarters and their half dollars and pack a smelly tent or an unsanitary hall to greet him. He neither entertained nor educated. He was not a faithful portrayer of good or evil; he left behind nothing to be remembered by but a vacancy in the purse. Yet he drew full houses, small as they were, wherever he went. says “Lumber.”

To the man who has lived his life in the sawmill town of the United States the old Hamletian ham is a whimsical memory; he has been replaced by the greatest educator of the common people (and most of us are common people), that the world has ever seen—The Movie.

The water boy in the woods nowadays can, for a dime, see the great actors whose every move is a benediction; the loose-lipped ignoramus can have brought before him the greatest builder of human life; the seasoned and intelligent southern man worker can see the great trees cut down and crash through woods to Pacific Coast mills, every detail a perfection; can see the flitches they themselves, perhaps, sent the band saw through rear themselves into place in Gulf shipyards; can see his brothers of the snowy North guiding their loads of logs down frozen pathways to their resting place until the spring winds sweep along, on the banks and breasts of the solid rivers, the women of the household can see perfection in form and dress, and sweetness of life talk to them out of the screen. The world is no longer bounded to them by the railroad where it dies away in the distance, or by narrow walls that shut out the bigness of life. All life and greatness and goodness and brains are brought to them and poured, like treasurers of the Incas, at their feet.

What the movie has done to help make sawmill workers better contented is but a promise of what it can do. Its worth is recognized by the modern mill builder and a movie show is part of the building plans of every mill that arises in a tract of timber. The operators of sawmills can give their working force an education that will result in nothing but betterment of community life, of precision and efficiency in their labors; an interest in life that will make the littlest strip of “shorts” that ever was sent out on a car an inspiration.

The National Wholesale Lumber Dealers’ Association, whose headquarters are at New York City, have secured a substantial reduction in the present high demurrage rates. The new schedule went into effect a few days ago and the charges are now \$2 per car per day for the first four days after the expiration of the free time and \$5 per car per day thereafter.

Give size, quantity, location, condition and best cash price i.o.b. cars loading point.

Box No. 966, Canada Lumberman,
13-14 Toronto.

WATER STORAGE ON ST. MAURICE RIVER

The great benefit derived from water storage is soon to be further demonstrated on the St. Maurice river where a large water-power undertaking will soon be started.

The increased power made possible at the various sites on this river by the La Loutre reservoir, the largest but one in the world, is a strong incentive to prospective power users. It is estimated that the conserved water thus made available represents a total increase of over 500,000 h.p.

The proposed development above referred to is reported to be in connection with the operations of the St. Maurice Paper Company, the latter having leased two sites in the lower portion of the river, known as Les Forges and La Gabelle. It is intended to combine these two, giving a total effective head of 33 feet, while the regulated flow from the La Loutre reservoir increases the power now available at this site, namely 20,000 h.p., to 42,000 h.p.

Another proposition reported in this connection is the construction of a hydro-electric plant utilizing the combined sites of La Gabelle and Les Gres, the latter site being controlled by the Shawinigan Water & Power Company. The latter power company would carry out the development and supply hydro-electric power to the St. Maurice Paper Company under a special contract.

BELTING FOR SALE

We have a large quantity of Second-Hand Rubber and Leather Belting in all sizes and plys up to 24 inches in width, which we can sell at interesting prices. Send us your requirements.

Review of Current Trade Conditions

Ontario and the East

Business in the lumber line continues brisk and there is an active demand from various centres in the United States where building activities are particularly brisk. Prices in all ranges of material, particularly that used in house construction, remain very firm. As the season advances there is considerably more structural work being carried out in Ontario than appeared possible this spring. Then throughout the country and in various small towns a great deal of repair work, extensions and renovations is going on. Dry stock is getting scarcer all the while and it begins to look as if there might be a decided shortage in certain lines of lumber before the season closes.

Mill stocks are now pretty well bought up and this year's cut is coming on to the market. Manufacturing and labor conditions are on the whole quite satisfactory and distribution is not presenting much difficulty to shippers at the present time. Those persons who have been hesitating about building or laying in additional stock in the hope that prices would come down, have reckoned without their host; production expenses are aviating all the while and there is no immediate indication of any decline in the value of wood goods.

That the future is viewed with assurance is evidenced by the recent successful sale of several township rights in northwest Ontario when the timber holdings brought as high as \$22.50 per thousand feet on the stump, while \$20.00 was a general figure. Most of the wood in the township sold, consists of white and Norway pine.

The export situation is improving somewhat but not as rapidly as certain big firms would like. More available space is now at the disposal of shippers and the Federal Government is doing all in its power to increase tonnage facilities but it will be well on in the fall or the beginning of next year before ordinary commercial business can be arranged without a great deal of difficulty, delay and uncertainty.

In regard to the demand for Pacific Coast products, there is a fair market with some improvement in the requisitions for timbers. Ontario representatives of B. C. Coast and Mountain mills complain of trouble in getting shipments through in a prompt manner owing to the car shortage which is an aftermath of the strike in Winnipeg. Shingles are constantly advancing and while a few carloads are coming though the demand is much above the supply. There have been three advances during the last fortnight and XXX are now quoted at \$6.40 and XXXXX at \$7.00. Since the middle of June there has been an advance of \$5.00 on all clear fir items such as flooring, ceiling, trim, etc., while recently there was another jump of \$2.00 on boards and shiplap. Just now it is a case of prices adjusting themselves to conditions or conditions to prices so far as the eastern demand is concerned. How high quotations will ascend is a matter of conjecture.

Owing to the marked shortage of all kinds of lumber and the increased demand due to improved building conditions and large orders from other users, American buyers are coming to Canada and buying all the stock they can possibly secure. High prices do not seem to deter them at all, providing they can get the lumber. To this one feature, perhaps, more than any other, can be attributed the steady increase in lumber values in Canada. The building situation is much more active in the States than in Canada and this has materially increased the demand for Canadian spruce, hemlock and other soft woods. The American buyers are trying to keep up diminishing hardwood stocks with shipments from this country and are buying birch, beech and maple in large quantities. The local demand is all that is to be desired. Wood users, such as furniture, sash, door and box men, builders, etc., are all seeking material. It is hard to forecast the future but if the present movement continues it looks as if available stocks will be exhausted before the next winter cut is on the market.

United States

Generally speaking there is not much change in the situation except that prices are soaring all the while and trade on market stock is good. Business is firming up all along and building activities are remarkably active in many centres. One eastern firm states that it is useless to try and keep up with the constant change in prices and any correction that is made in the list today may look like a back number to-morrow. Much depends upon how badly a customer wants his stock so far as the figure at which it changes hands is concerned. In the hardwood field it is gratifying to note that there will be only one set of rules for inspection and this will eliminate much of

the trouble of the past. Oak in the better grades is probably in the best demand today of the native American hardwoods. There is a great scarcity of mahogany, and the demand for this wood is very keen. Supplies of walnut are comparatively large and the demands for this wood is not equal to the supply of some grades offered. From an inspection trip to the mills, both North and South, an uninformed observer might conclude that the stocks are fairly large, and while this is true it does not signify that there is a great deal of lumber for sale. A very large part of the lumber still stacked at the mills is sold and is only awaiting shipment. The result is that the volume of lumber appears to be greater than it is, so far as that available for making sales is concerned.

The demand for white pine continues to increase. Some very heavy sales have recently been made in the North and the activity, especially among retail buyers, shows no sign of the usual midsummer slackness. On the whole, orders are not accepted for future delivery though there have been some large orders placed for delivery from time to time during the fall months. Buying of this character is customary at these mills and such orders are accepted only from old time customers of the manufacturers. There has been a considerable speeding up in production and it begins to appear as though production this year will be heavier than expected.

The demand for red cedar shingles continues good and manufacturers could well sell more shingles than they are producing. The supply of red cedar logs which at no time this season has been heavy has been further decreased by the Fourth of July shutdown and there is no apparent reason to believe that production will be materially increased for some time. The result is that prices are very firm and in a number of markets advances were made this week. Supplies of lath in manufacturers' hands in all sections of the country are small and as the home building boom increases in volume, the call for lath increases and prices go up.

A broad survey of the southern pine situation reveals a stabilizing tendency. The policy is becoming more and more general for manufacturers to accept orders which can be delivered within a short time and there is a growing tendency to set prices for a definite time and hold to them for that time. There is no tendency toward price recession and there have been price advances upon numerous items, but abrupt and constant revision in prices, notably in the better grades, especially of flooring, are less evident. In the Southeast buying continues brisk and the abnormal spread in price between certain grades is being smoothed out somewhat by the revision upward of price lists on the lower grades.

Great Britain

In a general report on the timber market an admirable summary is given in a recent letter sent out by Alfred Dobell & Co., which succinctly presents all the leading features.

In Nova Scotia and New Brunswick spruce deals, etc., the stocks are still very light, and depleted of several important dimensions. Operations continue restricted owing mainly to the difficulty in obtaining tonnage. Hardwood planks are wanted, and have not arrived as freely as during the previous month.

In Douglas fir, the arrivals have been practically all for account of the Timber Controller. The consumption has been well maintained, and the light stocks consist chiefly of Planks. Timber of good length and size, also decking, would meet with a ready sale. Prices are firmer.

In Scandinavian deals, boards, etc., flooring boards have arrived freely. The consumption has been satisfactory. Stocks remain light and values very firm.

There is very little alteration in the position of pitch pine. The demand continues satisfactory at advanced prices. Imports have again been light, and the offerings for forward shipment have been parcel lots in limited quantities.

During the past month there has been an increase in imports of all classes of lumber, the arrivals having been chiefly under contracts. Operations have been a good deal interfered with by the congested state of the quays and the difficulty experienced by merchants in obtaining railway facilities. Consignments of red and sap gum and whitewood lumber in thicknesses of one inch and up have been sold at slightly lower prices than previously. The demand for thin lumber of all descriptions is well maintained.

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

The auction sales of mahogany held during the past month were well attended, and keen competition ruled for all classes of mahogany with the exception of round Honduras.

African—Lagos, Benin and Grand Balsam were in strong demand, and the moderate quantities on offer cleared at prices showing an upward tendency. Sapeli.—The small quantity offered met with

spirited competition, and extreme prices were realized for sound, roey logs. Axim.—High values were obtained for the shipments from this district.

Honduras. Square logs sold readily at good prices. Round logs failed to interest buyers at the auction sales, but substantial quantities have been sold by private treaty.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

St. John Reports Serious Shipping Conditions

A much better feeling prevails in the eastern spruce market than for some time past, and if it were not for both rail and water transportation difficulties, business would be extra good, as the American market is advancing from week to week, and to-day any random spruce of short lengths can be sold at \$40.00 on cars St. John, paying in American funds, which is equal to another \$1.00 per M., but the whole trouble is to get foreign cars in which to make shipments.

This on top of no water transportation makes a double hardship which the lumber manufacturer is compelled to bear; certainly it is not fair to both the public who want the material and the shipper who wishes to forward his goods. The C. P. R. refuse to allow any of their cars to go into the United States from the Eastern Provinces further than the western and southern boundary of the State of Maine, claiming that 5,000 cars are needed for grain shipments from the West during the coming fall; then the United States Government, who are handling the railways in the United States, have not forwarded the usual number of empty cars from their country into Canada. Just when this car situation will clear itself cannot be told and until it does shipments of lumber to United States points must be very limited.

The base for spruce at Boston is now \$55.00, and many claim it will reach \$60.00 per M. Stocks are very scarce both in Maine, Vermont, New Hampshire and the Eastern Provinces and many mills in eastern Maine are now about sawed out, having only cut a limited quantity of logs during the past winter. To be very frank there is a scarcity of lumber which is being felt all over the continent and prices and conditions on the west coast of Canada are very similar to those on the East, B. C. fir being almost impossible to buy for shipment to the east; in some cases an advance of \$5.00 per car has taken place during the past four weeks. In fact to-day all prices on B. C. fir are withdrawn as no stocks can be found.

All mills at St. John are running and are well sold up, in some cases oversold, and buyers are coming every day looking for stocks and finding none; laths are oversold and to-day the ordinary 1-3/8 in. lath are selling at \$4.00 f.o.b. St. John. Shingles are very scarce and cannot be found at any price as manufacturers are oversold. Short stocks, such as stavesheading and shooks are very firm and orders plentiful.

Ottawa Reports Continuous Improvement

Continued improvement, as to tone, price and conditions, was shown in the Ottawa lumber market during the closing period of July. Summarized for the whole month, the business so lumbermen reported was the best that had been witnessed since the boom years before the war.

Prices remained absolutely firm. In some instances they advanced though not in all the grades. Rail transportation tightened up a little, though there were plenty of cars available to carry shipments consigned to U. S. Points.

The cut of the Ottawa valley with the sawmills this year will fall away below normal, but from the woods end, it is an understood fact, that the operators are going to rush unto the woods during the coming season every man they can get, in an attempt to turn out the biggest log output since 1914.

Stocks on the Ottawa market during the last two weeks of July which period is recognized as being a dull one, were not exactly low as things go, but the market on the other hand was a long way from being overstocked—especially in dry lumber.

The export demand to the United States continued good and showed improvement over the preceeding two weeks. The middle grades and mill run were chiefly in demand. Indications pointed at Ottawa from the demand for this quality of lumber that building operations were about to commence on a big scale across the border.

Inquiries showed improvement and increased in range and in the quality of stock desired. The European export situation showed little or no change. The general impression was that the freeing of cargo space was an indefinite matter which rested entirely with

the British Ministry of Shipping. Lumber on Government account continued satisfactory, for transportation to Europe.

Hopes were held out on one hand that with the British Ministry holding up approximately seventy per cent. of the available shipping space for the transshipment of merchandise on Government account that there might be a break in the rules before long. Others were sceptical pointing out that even if the Government did relax on the shipping space as at present requisitioned, that the movement of the western grain crop together with bacon and other food stuffs would use up what margin of space might be released.

Some lumbermen and exporters in the Ottawa Valley, so the "Canada Lumberman" understands, are even now looking ahead as far as the spring months of next year for the real opening up of the European export trade. Shipments of lumber or even deck cargoes they point out are not feasible during the winter period.

Lath remained strong and shingles firm. In some instances there was a scarcity reported in the latter.

The labor situation with both the sawmills and the woodworking plants showed no change. Some of the operating companies began making preparations for the sending of the men to their woods camps. The outlook for the securing of labor this year while better on the main than last seemed early in the season to indicate that there was still a considerable shortage.

Building activity during the month of July did not show any great change with the exception of the letting of the half million dollar contract to Bate-McMahon Company for the new Loew theatre. For the first half of the year building permits at the city hall in comparison with the July-December period last fall more than doubled increasing by \$655,366. During the last six months of 1918 the amount was \$404,771, and from January to July this year \$1,660,137.

With the woodworking factories conditions remained about the same most of the plants having enough to keep them going. No exceptional increase in business was reported. The furniture plants reported good business with prices keeping up.

Situation Getting Much Better in Montreal

The improvement in the Montreal market referred to in our last report has continued, and conditions are now better than at any time this season. Buying for American account is the great factor in the revival, and in this respect the market has undergone a wonderful change. Wholesalers report that the buying orders from the Eastern States are on a very large scale, due to the extensive building there. Heavy inquiries and orders come in by every mail. Naturally prices have taken a jump, with the outlook for still higher quotations. Lath is being bought freely, prices touching record. Some firms who were loaded up with lath and who at one time would have gladly sold at a loss have cleared out all their stock at very good prices, and are unable to supply the demand.

B. C. stock continues to advance. The mills are now working to capacity, and have turned down orders from the East. Against this, the prices of certain lines have increased to such an extent that Eastern customers decline to purchase.

The local demand for lumber is better. Montreal buyers have done very little for months, but they will now have to pay the enhanced values which are ruling, due to the more general activity in the lumber market. Building is undoubtedly picking up, and contractors express the opinion that work will steadily increase and that the fall will see a rush. The number of contracts let is on the upward plane, while supply dealers state that the number of inquiries is large. These do not always lead to business. There is, however, a tendency to recognize the fact that costs are likely to go higher—lumber certainly will not be cheaper. The Montreal Housing Commission has run into two or three snags, and very little progress has been made with the scheme for industrial dwellings. The Provincial Government has suggested that a tax of 2 1/4 per cent. be levied on the loan of \$5,000,000, for the purpose of paying the expenses of a provincial technical committee. The commission has declined to agree to this proposal.

Lumber is being sent by the British Timber Buyer's office to

JOHNSON'S Veterinary Remedies

are the surest, the most economical and the best medicines with which to equip your stables. They have been on the market for twenty-five years and still retain their superiority over all others.

The quality never varies, it is our first consideration.
Prices in effect at the present time are as follows:

Johnson's Horse Liniment No. 1	Per Gal.	\$7.00
Johnson's Horse Liniment No. 1	Quarts, Per Doz.	19.00
Johnson's Horse Liniment No. 1	Pints, Per Doz.	10.00
Johnson's Horse Colic Remedy	Per Gal.	10.00
Johnson's Horse Colic Remedy	Quarts (8 Doses each) Doz.	30.00
Johnson's Horse Colic Remedy	Pints (4 Doses each) Doz.	15.00
Johnson's Veterinary Healing Ointment (Gall Cure)		
2 lb. Tins	each 2.25 Doz.	24.00
1/4 lb. Tins	Per Doz.	4.00
Johnson's Concentrated Condition Powders, 1 lb. Pkgs.	Doz.	6.00
Johnson's Condition Powder, No. 2	doz.	2.75
Johnson's Horse Worm Powders	Pkgs., Per Doz.	4.00
Johnson's Purging Balls	Per Doz.	2.50
Johnson's Antiseptic Dusting Powder		
(For Drying and Healing Sores, Proud Flesh, etc.)	Per Doz.	8.00
"Kreoline," antiseptic, deodorizing	Gal. Tin	1.50

Our Family and Van Remedies are as follows:—

Pine and Tar Cough Syrup	Big 4 Liniment—Mosquito Oil
Purgative Pills	X Ray Liniment
Little Liver Pills	Cholerine Mixture (Diarrhoea)
Porous Plasters	Headache Powders
Stomach Bitters	Sarsaparilla
Laxative Cold Tablets	All Healing White Ointment

All Drugs and Patent Medicines at Market Prices.
Mail orders solicited — Prompt shipments made.

A. H. JOHNSON WHOLESALE
Collingwood, Ontario DRUGGIST

the United Kingdom at a great rate, the goods being shipped from all the principal ports of the St. Lawrence, by liners and tramps. If the present rate continues, the greater part of the lumber by liner space will have vanished by the end of August. The exporters are very busy—a contrast to the experience of last year. The decline in sterling exchange is a serious matter for those who have received Government orders, and for those who are sending goods on private account. The basis of the Government business was sterling, and the unexpected drop involves a considerable decrease in the amounts receivable. This, with the high freights, has restricted shipments by private exporters.

Lumber Conditions in the West

C. S. Battle of the C. S. Battle Timber Co., Vancouver, sends the following highly interesting letter to the "Canada Lumberman" on Pacific Coast conditions, production, prices and outlook:

Heretofore I have written in rather a constrained and conservative manner, but at present I feel more optimistic regarding the general lumber situation.

Export lumber.—The demand for export number is increasing, bottoms are getting more plentiful and rates are gradually declining, but are still too high to bring the best results.

Northwest trade.—Owing to the short crop in the Northwest millmen do not look for a large business until another crop is made.

United States trade.—The demand for lumber from the other side is more than sufficient to take care of the lumber produced in this section and all mills have plenty of orders.

Local trade.—The local demand for lumber is about double what it was one year ago. Houses are being built and added to. In fact, the country is underbuilt and it looks as if there would be a good demand for lumber for the next three to five years.

Price of Lumber.—The wholesale price f.o.b. the mills on lumber ranges from \$22 to \$54 per M.

Price on Shingles.—The wholesale price f.o.b. the mills on shingles ranges as follows:

Three X	\$4.70 to \$4.80
Five X	\$5.30 to \$5.40
Eureka	6.10 to 6.20
Perfection	6.75 to 6.80

Standing Timber.—The price of standing timber has remained almost stationary for the last five years except for small tracts handy to log, but we are on the eve of a bull market. There is a large deal on to the South of us which, if consummated, will be the biggest deal ever pulled off in timber on the Pacific Coast, and will start the ball to roll.

Price of Logs.—Fir logs are worth \$12, \$16 and \$21 per M delivered at the mill. Cedar logs are worth from \$18 to \$31 per M. delivered at the mill, depending on the quality. The above prices are checked up on to-day's market and are dependable.

The yellow pine situation in the south, judging from Government reports, is almost alarming. During the next five years 86 per cent. of the standing yellow pine will have been cut. The market for Pacific Coast lumber is broadening all the time. Watch the price of standing timber for 1920.

As stated above while this report may look optimistic it does not hardly represent the true facts, and if this information is of any value use it as you see fit.

No Excuse for Inflating Prices

"Timber," in a recent issue, says: Sir James Ball, who lately returned to England from a trip to Canada, said in an interview that he felt constrained in the interests of fair play, to speak his mind plainly on the subject of excessive price charging for yellow pine by a section of the trade. To the credit of the great bulk of the timber industry, said he, there has been a loyal adherence to the maximum values laid down by the Control, and which, up to the end of March, were not exceeded, but, he added smilingly, human nature is the same everywhere, and the temptation to make a bit is no doubt strong. "I leave the Controllorship at the end of the present month, and return to my pre-war avocation, but before I go I should like to impress upon all concerned the necessity, in their interests, of observing the prices laid down for their guidance. Before these prices were fixed there was quite enough made in the shape of abnormal profits, and the Control came not a day too soon. I may say," added Sir James, with emphasis, "that if heed be not taken of my warning—the last which I shall probably give—the government will take steps to restore the balance in a way that will be an unpleasant surprise to the profiteers. There is really no excuse for sellers inflating their prices for yellow pine, and its shortage at the present time ought to deter any tendency to do so. We have provided for a liberal profit to the vendor and, compared with the pre-war conditions of trading, the margin is a handsome one. I want to impress upon one and all," he continued, "that it is a most misguided policy to seek for big profits under present conditions." Sir James said the Control would continue after

his departure. Its continuity was absolutely necessary until such time as the purchases made recently were disposed of. The object of making these purchases was a measure of protection against the anticipated high values which would doubtless be quoted by Continental exporters. It was the case that the Government had initiated the policy of handing over all goods to the trade, and the Government was quite willing to adhere to its policy, but it must provide a safeguard for the least as well as the greatest, and he felt that this had been done. Our purchases, said he, will be brought to England, and buyers from us will be in a position to undersell outsiders.

As to his successor, Sir James was not in a position to discuss this phase of the Control. Take it from me, he added, the Government is not going to let its helpful sympathy with the trade diminish, and if I were to continue as Controller I would make very short work of the profiteer. As regarded the more recent phases of restricted trading, he mentioned the purchase of some sleepers, which did not affect the general question.

Touching upon industrial conditions, Sir James gave it as his opinion that the undue stiffening of prices in the timber trade tended to create labor unrest and reacted upon the community as a whole. People felt uncertain of their position in matters of supply and demand, with the result that business languished and all suffered. The timber trade was a great industry, and was capable of yielding abundant profits based upon fair and equitable lines. It remained for its followers to rise to the occasion and be satisfied with legitimate results.

Sir James said he visited Montreal, Quebec, Toronto, Ottawa, and other centres, and bought largely. He met many members of the trade, and discussed with them the present and future of the woodgoods industry, and in that way was enabled to clear up many points which were previously obscure. He had made arrangements to ship his purchases rapidly, and when these arrived they would be sold to consumers at the lowest possible profits, and it would be seen that the prices were reduced to the extreme limits. He had bought some 23,000 standards of good quality, well-seasoned yellow pine and the great point was to get the stuff into circulation. It was not the intention to raft the goods; shipping facilities would be availed of. These purchases were all made since the signing of the Armistice, and the sleepers which he had referred to would be disposed of to the railways.

Indulging in a brief retrospect on Timber Control, Sir James said he was now leaving, after two years' association with the trade, and he believed he was right in believing that throughout his relations with the greatest and the least had been cordial. Since he took up office at Whitsuntide, 1917, in succession to Sir Bampfylde Fuller, K.C.S.I., K.C.I.E., he had tried to do his best for one and all, and he wished it to go forth that he had experienced from big and little in the industry the maximum of loyalty and whole-hearted co-operation. He desired to associate with that expression of approval his sense of the unflinching and untiring exertions of the Trade Press, which was always ready to help and never slow to point out where the Control could be improved, and the conditions of commerce bettered. They owed much to the timber newspaper Press, which although now and then severe in its criticism, was a healthy tonic to the trade.

An interesting conversation ensued on the merits of Douglas fir as a substitute for yellow pine, in the course of which reference was made by Sir James to the use and utility of Douglas fir. There was no reason why the latter should not be extensively used at home as well as abroad. In point of fact, there was more Douglas fir brought home now than ever, and one had only to view the fine spar in Kew Gardens to realize the magnificent proportions of the wood. There were enormous possibilities in the future for Douglas fir.

Small Percentage of Sawdust

A recent edition of a weekly publication of Price Bros. & Co., Quebec, says: The percentage of sawdust in cutting logs is one-half of one per cent. The usual percentage in other mills is one per cent. The sawdust percentage of our chips is 1.98, whereas in most mills it runs from 2.5 to 3 per cent. Considerable satisfaction is felt in this showing.

Will Add to Provincial Revenue

With lumber at its present prices, and no sign of a downward tendency, the provincial government, according to a recent despatch from St. John, N. B., has decided that it might as well have a share in the extra profits. Stumpage rates on Crown lands always have been lower than the rates charged by private owners and recently the discrepancy has become more marked. An order-in-council has put into effect a new rate of \$3.50 per thousand for spruce instead of \$2.30, with other rates in proportion. It is estimated that this will add \$150,000 to the provincial revenue, while leaving the rates lower than those charged on private timber lands.

Shipbuilding Active in Nova Scotia

The Supply of Tonnage is Inadequate to Meet the Demand for Carriers—Rates Still High on Lumber

By E. Woodworth, Parrsboro, N. S.

The revival of wooden ship-building in Nova Scotia was largely caused and promoted by the great war, but the boom did not cease when the armistice was signed and it is not likely to terminate now the peace terms are accepted. Of course, many vessels were in course of construction when the fighting ceased and they obviously had to be completed, but many new keels have been laid since that time and probably many more vessels will be built before the shipyards become idle.

It is true that, with the prospect of immediate peace, many builders hesitated about making further investments. Wages and the cost of materials remained as high as ever, while on the other hand they anticipated a speedy reduction in freight rates and a corresponding falling off in the demand for vessels. At first freights showed a slight tendency downward and some ship owners were afraid the bottom was falling out, but at no time did prices show any inclination to revert to pre-war levels. Early this year a new schooner was chartered at Parrsboro, N. S., to load three cargoes of deals for Great Britain at three hundred shillings per standard. This was considered a big drop, for freights had soared to four hundred shillings last year, but it did nothing in the way of fixing rates, for freights soon climbed to three hundred and fifty shillings, or at least ten times what the rate was five years ago.

The fact is that the supply of tonnage is totally inadequate to meet the demand for carriers. The stock of lumber on hand is exceptionally large and prices are extremely high, but very few bottoms are to be had. The Imperial Government has purchased many million feet of deals in Nova Scotia and New Brunswick, but practically all their immense holdings await transportation. Freights to South America and to the West Indies are as high as they are to cross the Atlantic, and more vessels seem to be needed everywhere. Shipbuilding costs far too much at present, and there is always the possibility of a big slump in values, but, while present demand for tonnage continues, men will continue to build ships.

The number and tonnage of the vessels registered within a definite period at any port of registry furnish the best possible means of determining the extent of the shipbuilding boom in that vicinity. Judged by this rule Parrsboro, N. S., is one of the ports that can boast a new record. The number of vessels entered on the registry books of the port of Parrsboro during the first half of the current year was thirteen. These were all tern schooners and averaged more than four hundred net tons each. Several of them have changed owners since being registered, and one has been sold to foreigners and has been taken off the registry books. At least seven more vessels will be added to the Parrsboro books before the year ends. One or two of these will be four-masters, and one will be a steamer of about 500 tons. In most of the yards where these vessels were built others will be commenced immediately, and it is said that the steamer will be replaced by another of more than double her tonnage.

In the southern part of Nova Scotia it is probable that there are several ports of registry that will exceed Parrsboro's record with regard to the number of entries, but the vessels built there are chiefly of a different class and will average little more than one hundred tons each. They are built for fishing, and are first-class of their kind, but, of course, do not require to be large. New vessels have to be built every year to replace losses and to meet the growth of the business, but more were required this season than ever to make up for the depredations of the U-boats. Some fine tern schooners are also built along the southern and south-western coasts, but their number is small in comparison with the fishing craft. In other ports of the province the ships built are chiefly tern schooners with an occasional four-master, and the tendency seems to be to increase their size without greatly diminishing their numbers.

How Eastern Lumber Firm Gives Service

Two pictures rise up. In one there is a big pile of lumber scattered about an open field. There seems no special order or regularity in the way the lumber is piled. Snow and ice is in evidence everywhere and it would seem difficult to get a load of that lumber without having to cut away the ice which clings to each stick of lumber, each board and each portion of that big lumber pile. Some of the boards are warped and twisted from exposure to the sun and rain. Some of the timber looks soaked with water, while evidences of approaching decay are apparent says, "The Busy East."

But look again and see an entirely different picture. This time we see great piles of lumber, but under conditions altogether different. A huge warehouse contains the lumber which is piled in orderly bays or sections. There is no snow or ice on the neatly piled boards,

which are clean and dry. All kinds of lumber, both rough and finished, wide and narrow, hard and soft, planed and unplanned, are there. Every kind of lumber is in a special place and can be easily located. Boards of the same width and quality are piled together. Driveways run through the big shed and teams can be loaded under cover no matter what kind of weather is prevailing outside.

The first picture gives the old-fashioned way of conducting a lumber yard. The second picture shows the modern method as inaugurated and carried out by the Dartmouth Lumber Company, of Dartmouth, N. S. There can be no possible doubt in any one's mind which is the better way. Ask the man who is building and see what he says.

In former years Dartmouth was a sort of appendage to Halifax. Some people looked upon the town as a good place in which to sleep. But times change and Dartmouth is fast waking up from the lethargy of the past. One of the real needs of the town for many years has been a "Building Supply House" where one could obtain all the essential materials for the construction of a residence, store or factory. To fill this need, in the early part of the year 1918, The Dartmouth Lumber Company, Limited, was organized, the directorate being composed of Messrs. H. R. Silver, president; Hamilton Lindsay, vice-president and A. A. McDonald. The secretary-treasurer and general manager is Mr. Harold Brownhill, a man of energy and ideas, who is undoubtedly "making good." He has proved it possible to sell as cheaply as the Halifax firms and when the advantage of quicker delivery is considered, "going to Halifax" results in loss instead of gain. The business of the past year has been eminently satisfactory. More and more room has been found necessary to house the varieties of stock which this enterprising firm are constantly adding, and customers have expressed their entire satisfaction with the service given.

This season promises to be especially busy with the Dartmouth Lumber Company, which is making preparation for the eager demand for all sorts of building material. Many houses will be built; much repair work will be done and it looks as though the Dartmouth of next year would be an altogether different Dartmouth from that of recent years.

The company's office is located in a large two storey building, part of which is used to store doors and sashes. A separate shed at the rear contains large quantities of shingles of different grades, designed to meet the requirements of the people.

The big idea in connection with the Dartmouth Lumber Company is the fact that its supplies are kept under cover, fully protected from the elements; always in first class condition; always ready for use. The big sheds covering acres of ground, stand out prominently. The idea seems so fine that one wonders why every lumber dealer does not do likewise. The introduction of up-to-date methods is always appreciated by a discerning public.

Fight Fires With Gasoline Pump

The value of the new engine with which to fight forest fires has been amply demonstrated. It was first tried at the Gibson mine on the south fork of Kaslo creek, B. C., recently when it not only put out a bad forest fire but saved \$20,000 worth of mine property. It is stated this would have kept ten men busy for a week had the pump not been available.

The engine and pump can be packed anywhere up a mountain by a couple of men and has a great force. The pump and gasoline engine only weigh 120 lbs, but develop 45 h.p. The stream from the inch and a quarter hose has a nozzle velocity of 120 lbs. per square inch—sufficient to knock a man down at 100 feet distance.

Through the efficacy of this pump another forest fire, on Pass creek, which has spread over 2,000 acres was greatly got under control and saved several ranches.

Protecting the Trade by Stable Prices

The Long-Bell Lumber Co., of Kansas City, Mo., recently sent to the trade the following notice which will be read with interest:

While we believe our present prices are lower than the average manufacturer of yellow pine lumber in our class, and while we know the tendency is to higher prices; yet it is our very strong conviction that it would be better for the trade in general if prices were more stable, and we are disposed to use our influence to that end. Therefore, this is to announce to the trade, that our prices on our yellow pine lumber, until August 15th, will be no higher than now. We are unable to predict what market and manufacturing conditions on yellow pine lumber will be after that date, but it shall be our policy to endeavor to protect our trade by stable prices on yellow pine lumber for successive periods of thirty days, if humanly possible. It being the policy of our company to render prompt service, it shall not be our thought to take orders that we cannot reasonably expect to ship within thirty days after acceptance.

EDGINGS

Ontario

The Driftwood Milling Co., Driftwood, Ont., have commenced the construction of a pulp mill.

Sucker Creek Timber Slide Co., Ltd., with head office in Port Arthur and a capital stock of \$15,000 has been granted a charter.

The sawmill of Mr. Musclow situated at Musclow, Hastings Co., Ontario, was totally destroyed by fire. As no insurance was carried the loss is rather a serious one.

The Preston Furniture Co., Limited, Preston, Ont., was recently incorporated to manufacture and deal in goods, wares and merchandise; capital \$100,000.

Midland Woodworkers, Limited, Midland, Ont., have been granted a provincial charter to carry on business in Ontario, the capital used not to exceed the sum of \$366,000.

Chase Tractors Corporation, Limited, Toronto, Ont., have been incorporated to manufacture and deal in lumber and to carry on the business of woodworkers; capital \$2,000,000.

The Goderich Mercantile Co., Limited, Goderich, Ont., were recently incorporated to manufacture and deal in baby-carriages, go-carts, toys and furniture of all kinds. Capital \$40,000.

York Steamship Co., Limited, Toronto, have been incorporated to build, construct or otherwise deal in steamships and vessels of any classes. Minimum capital to be used not less than \$5,000.

The Fergus Housing Company, Limited, Fergus, Ont., have been incorporated for the purpose of carrying on the business of builders, contractors, merchants, manufacturers and general agents. Capital \$40,000.

The Riordon Annex Housing Company, Limited, Hawkesbury, Ont., have been incorporated for the purpose of carrying on the business of builders, contractors, merchants, manufacturers and general agents; capital \$50,000.

Beattie Bros., Fergus, Ont., are adding two new wings to their factory: one to be 144 x 96 and the other 192 x 96, saw tooth construction. They are also erecting a dry kiln 120 x 96. Considerable new equipment will be installed.

Canada Petroleum & Refining Corp., Limited, Toronto, have recently been incorporated. One of the powers conferred on this company is to acquire and purchase, lease, or otherwise, timber limits or timber licenses. Capital \$2,500,000.

Mr. Rittenhouse, of the Financial Advertising Co., Toronto Stock Exchange Building, Toronto, is representative for a company who are calling for tenders for the erection of a 150 ton pulp and paper mill and power plant equipped to develop 5000 horsepower.

D. G. Steinman, who was a partner in the B. & N. Planing Mill Co., Milverton, Ont., died recently. He had retired, apparently in the best of health, and during the night passed away suddenly. Mr. Steinman was one of the most highly esteemed citizens of Milverton.

Canadian Aero Co., Limited, Brantford, Ont., have been incorporated to manufacture and deal in aeroplanes and other forms of aircraft on a commercial scale and to carry passenger mails, express, for hire between points and places within or without the Dominion. Capital \$50,000.

The will of the late William J. Smith, lumber merchant, of Weston, was filed for probate recently. The estate amounts to \$36,115.89, the bulk of which is held in promissory notes and book debts. The will apportions the estate between the four sons and two daughters of the testator.

Harry J. Strong, Limited, Toronto, has been incorporated to engage in the lumber business in all its branches, acquire timber limits and licenses and to erect lumber mills, saw mills or other woodworking plants for the manufacturing of lumber and wood in any form. Capital \$30,000.

John B. Smith & Sons, Toronto, have bought 144 sq. miles of timber limits from the Ontario government. The holdings are in McNish, Charlton, McCallum and Sturgeon townships. The timber is principally white and Norway pine and the company intend to start logging operations this fall.

Eastern Shipping Co., Limited, Toronto, have been incorporated to build or otherwise deal in steamships and other vessels of any class. The capital stock to be divided into 1000 shares of no nominal or par value, provided the company must carry on business with a capital of not less than \$5,000.

Premier Paper Products, Limited, Sarnia, have been incorporated to manufacture and deal in paper made from any material including manufacturers of pulp, straw board and other similar products. Also to manufacture and deal in lumber, boxes, barrels, and all other articles manufactured from wood. Capital \$50,000.

The McGibbon Lumber Co., Penetanguishene, Ont., which was recently incorporated with a capital stock of \$100,000 full paid up, has elected the following officers: President, Archie McGibbon; vice-president, Norman McGibbon; and secretary-treasurer, Finlay McGibbon; directors, Archie, Norman, Finlay, John and D. D.

North American Fiscal Corp., Limited, Toronto, have recently been incorporated. Among the powers conferred on this company are to acquire timber limits or licenses and to manufacture and deal in lumber, logs, pulpwood, or any article made in whole or in part from wood; also to construct, repair or acquire vessels, boats, tugs, etc. Capital \$50,000.

Work has been resumed in the plant of the Beaver Board Co. at Thorold after a strike of four weeks. The working period has been divided into three shifts of eight hours each, with a working agreement for six months. The men have been invited to form a shop committee which will meet the officers of the company to discuss conditions and grievances.

Forest fires southwest of Fort William have done great damage to timber limits and property. Archie Bishop lost his whole saw mill plant and the fires badly encroached on his timber limits. Mr. Bishop, his wife and family were driven from their home by the flames and had to spend the night in a row.

boat in the middle of North Lake. Mr. Bishop's many friends will sympathize with him in his loss.

In the serious fires which recently prevailed in Northern Ontario the store of Pellow & McMeekin, lumbermen, of Hearst, Ont., was completely destroyed. Luckily all the other buildings of the firm escaped. Pellow & McMeekin report that there is not a very active demand for lumber in their district at the present time and that the outside market is also quiet. Conditions, however, may pick up considerably in the near future.

The plant of the Ontario Paper Co., Thorold, Ont., was recently threatened with destruction. A fire broke out in the large paper machine room and gained considerable headway. Assistance was brought from Merriton, St. Catharines and Niagara Falls, N. Y., and after a stubborn fight the firemen succeeded in bringing the flames under control. Considerable damage was done to the roof and to a large stock of felts and paper stored in that building.

Provincial Police Inspector Storey reports he has captured one of the two men who entered the office of Schroeder Mills & Timber Company at Pakesley, Ont., several weeks ago, and after holding up the clerk with a revolver, decamped with over \$3,000 in cash. The police report that in all they have recovered over \$5,000, including \$3,000 in cash, Victory Bonds and a considerable quantity of stamps. The clerk at the lumber office shot one of the robbers in the arm, but the other made the clerk surrender everything.

Eastern Canada

The partnership known as the Northern Lumber Co., Montreal, has recently been dissolved.

The sawmill of the Leclaire Shipbuilding Company at St. Joseph de Sorel, P. Q., has been destroyed by fire.

John & C. R. Ross, who have been operating a saw mill at Baxter's Harbor, N. S., have dissolved partnership.

Three River Ship Yards Co., are constructing a new machine shop. This building is of frame and brick construction.

A contract has been awarded for the erection of a saw mill for Geo. C. Goodfellow, 511 St. Catharine St. W., Montreal.

Omer Lamothe, St. Louis De Champlain, Que., whose sawmill was completely destroyed by fire intends to erect a new building.

D. Sweeney, Yarmouth, N. S., is building a 150 ton schooner and McLean & McKay, Central Economy, N. S., have commenced work on a wooden ship.

Fire destroyed the plant and planing mill of the Tobique Lumber Co., Limited, Eel River Crossing, N. B. The loss was fully covered by insurance.

Fire visited the Richards Mfg. Co., Limited, Whites Brook, N. B., completely wiping out the plant and planing mill. The loss is fully covered by insurance.

Clovis Naud, La Chevrotiere, Terrebonne Co., Que., contemplates the erection of a sawmill and is in the market for sawmill machinery, including planer, matcher and steam power plant.

Hugh Doheny & Co., Limited, Montreal, P. Q., have been incorporated to acquire timber limits and to carry on the business of lumbermen, paper makers and woodworkers. Capital \$2,000,000.

Wonham, Bates & Goode, Inc., 145 St. James Street, Montreal, P. Q., have sold at 15 ton eight-wheel Orton & Steinbrenner locomotive crane, with electric magnet 40 in., to the Canadian Rolling Mills, Montreal, for quick delivery.

Chas. H. Russell Co., Limited, Montreal, was recently incorporated to manufacture and deal in lumber, timber, and wood products of all kinds and to purchase or otherwise acquire timber lands and licenses; capital stock \$50,000.

Albert Vickers died recently at Eastbourne, England. Mr. Vickers was chairman of Vickers, Limited, who are one of Britain's largest manufacturers of steel products and aeroplanes. The Vickers, Limited, have also a large plant in Montreal.

Pure Cane Molasses Co. of Canada, Limited, Montreal, P. Q., were recently incorporated with power to manufacture and deal in barrels, boxes and packages and to acquire saw mills, planing mills, cooperages and box factories. Capital \$250,000.

The St. Omer Lumber, Limited, Quebec, was recently incorporated to manufacture and deal in lumber, pulpwood and wood products and to acquire and hold timber limits and timber leases; capital \$70,000. Alfred P. Boisseau, lumber merchant, is one of the incorporators.

The American Import, Limited, was recently incorporated with head office at Montreal. Among the powers granted under this charter are to purchase or lease timber limits or licenses and to manufacture and deal in lumber, pulpwood or any article made of wood; capital \$20,000.

Carrying out its policy of providing good housing accommodation for its employees, the Laurentide Co., Ltd., is building three houses, of eight rooms each, at the logging headquarters at La Tuque. One is for Mr. B. Baxter, the assistant superintendent of La Tuque, and the other two for members of his staff.

W. H. Miller & Sons, Tomifobia, Que., who recently formed a partnership to engage in the lumber and pulpwood business, report that not as much wood is being peeled in their district as last year and that the price, f.o.b. cars, is \$14 for spruce. The firm expect to handle 5,000 cords of spruce this season and 1,000 cords of poplar, all peeled.

A charter has been awarded to Beauchemin & Rivet with a capital stock of \$49,000 and headquarters at Amos, Que., to own and operate saw mills, shingle mills and lath mills, etc., and generally to conduct the business of lumber merchants and manufacturers. The incorporators are Joseph A. Beauchemin, Pierre E. Beauchemin, Alex Rivet and Dr. Joseph A. Bigue, all of Amos.

A charter has been granted to the La Reine Lumber Co., Limited, with headquarters in Quebec and a capital stock of \$49,000. The incorporators are Roch Julien and Alex Faguy, of Quebec City, and W. Laliberte, P. Laliberte and A. Laliberte, of Saint-Remi, Portneuf county. The company is empowered to take over the business now operated by Wilfrid Laliberte and Frere and carry on the same and to manufacture, buy, sell and deal in timber and lumber and to equip and operate mills for the manufacture of pulp, etc.

SYRACUSE BABBITTS

Question No. 2

*How can two babbitts
analyze the same, yet be
different in content?*

ANSWER

A babbitt can be alloyed from scrap metal instead of from prime virgin metals. Scrap metals contain impurities in traces, which though negligible on analysis are sufficient to materially affect the quality of the babbitt. Besides they invariably contain dirt and other ingredients detrimental to the finished bearing; this accounts for the fact that some babbitt metals are quoted lower than

Does This Name of McClary's Mean Anything to You When Purchasing Your Requirements ?

The character of McClary's" from 1847 to 1919 demonstrates a powerful determined attitude of rigid faithfulness to a dominating standard of quality. Never failing to maintain that high standard of quality McClary's name stands to-day where it stood in 1847; in the forefront of Range manufacturers. This vigorous, robust organization concentrates into every article manufactured the value of its seventy-two years' experience, thus

McClary's Algoma Range

has absorbed into its manufacture not only high grade materials but also the valuable experiences gained from the manufacture of thousands of similar articles.

For the Camp, Boarding House, Hotel, or other large establishments where a big sure service is constantly required, the extensive cooking and baking abilities of the Algoma will be warmly appreciated. When stripped for action this Range astonishes the discriminating Cook by the amount of work it will accomplish without strain. The Algoma is made with a heavy Steel body and a strong, rigid cast-iron top. There are three different sizes of Oven with adjustable top to suit. A complete detail of its massive construction will be furnished on request to our nearest Branch.

Profit on Long Runs

Quit losing money through close prices, poor quality work and high production costs—investigate the H & B New Model

No. 115 Fast Feed Planer, Matcher and Moulder

—the greatest development in fast-feed machinery—a machine producing the finest grade of lumber at a speed of 250 to 300 feet per minute, cutting the cost and raising the grade from 30% to 50%.

No. 115 lasts longer under hard work, costs less per year of service, produces better lumber—a higher average run with a smaller percentage degraded for any cause—and does it at a lower cost per thousand feet and per month of service than any other lumber-making machine on the market.

Learn more about the No. 115 and its possibilities for increasing YOUR profits—we'll send full information on request.

Maple Leaf SAWS

Are Good Saws.

Maple Leaf Circular Saws are made of Special High Grade Steel, accurately ground; have hard-tempered center which makes a stiff blade that will stand up under the most severe conditions, and is less liable to push over in case of accident.

Let us prove it to you if you have not discovered it already.

EVERY SAW GUARANTEED.

ROCHESTER, N. Y.

Pendry Balanced Throttle Valve

for operation of locomotive cranes, log loaders, skidders, and all hoisting engines.

Gives operator perfect control of his engine, so essential in loading logs and heavy timbers.

Just the
Thing for

Logging Operators

The Pendry Balanced Throttle Valve is essentially a quick opening valve, perfectly balanced, but it can be opened as slowly and gradually as a screw stem valve and will remain open at any point to which it is set.

Furnished with brass body in sizes from ¾ inch to 2½ inch and with iron body in sizes from 2 to 5 inches, inclusive.

Prices on Application

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

Low Up-Keep Cost of Dominion Friction Surface Belting

Cost of maintaining equipment in the average plant is seemingly so small when compared with other costs that it is seldom considered seriously, but when totalled at the end of five years, represents a far greater expense than actual necessity demands.

Maintenance of belting is in itself an important item, because each repair means idle employees, idle machines and less production, the total cost of which is often greater than you would pay for better belting.

Dominion Friction Surface Belting is built for "service first" that its long, continuous performance may eliminate the necessity for repairs and replacements.

But it gives an added service in conserving power—the rubber that goes into it is a special friction compound that prevents practically all slipping on the pulleys even under quick load changes.

Our belting experts are ready to help lower your maintenance costs on belting and can suggest changes that will lower your production costs.

A phone, wire or letter to our nearest service branch, places at your disposal, without obligation or charge, not only their services but the entire facilities of the oldest and largest rubber organization in Canada.

Makers of

Dominion Hose, Packing and Industrial Rubber Goods and Dominion Tires, the GOOD Tires for every purpose.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

— IN —

**Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.**

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings
whether you buy them or not**

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

DUNLOP

"Gibraltar RedSpecial" Belting

"THE ORIGINAL RED FRICTIONED-SURFACE RUBBER BELTING

WHEN it's a question of unusual achievements in Beltdom, "Gibraltar RedSpecial" stands supreme.

As an effective means of trimming down "overhead" it is known far and wide.

This Red Frictioned-Surface Belt has dominated the field since its inception.

Without variation this belt has lived up to the exacting standard of service set by us when it was first introduced to belt buyers.

Having been tested and tried to the limit in all manner of places—and by thousands of users throughout the country from the Atlantic to the Pacific—"Gibraltar RedSpecial" will also secure you against the uncertainties which surround the use of "just-as good" brands.

The price may be higher than that of "ordinary" belts, but the service is long and satisfactory in the extreme, as a multitude of long-time users will gladly testify.

With the Dunlop Unreserved Guarantee which goes with every belt, you should have no hesitation in making your next order read "Gibraltar RedSpecial."

You know the Dunlop reputation for square-dealing, too.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 1/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

- 1st—Pyrene is death to all inflammable fires.
- 2nd—Pyrene does not freeze at fifty degrees below zero.
- 3rd—Pyrene does not deteriorate.
- 4th—Pyrene is easily operated and ever ready.
- 5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.
- 6th—Pyrene has served with the boys at the front.
- 7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the 2½ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances, also for our book on how to protect your factory. This book contains valuable information.

Aloxite Saw Gumming Wheels Sing the Song of Clean Cutting

THEY sound good to the filer's ear, because they cut clean and free. No drag—no undue heat. The keen, sharp, tough Aloxite grains stand right up to their job—and how they cut!

The bond breaks at just the right time to keep the wheel free—yet the wheel stands up to insure against waste—against the wheel losing shape.

And, remember—that Aloxite Wheels are uniform in grit and grade.

Made in all of the standard sizes, shapes and grits

Every Wheel Pulls All the Way

The logic of Duplex low costs is as simple as a sum in common arithmetic.

When you consider the principle of the Duplex four wheel drive, it is really not open to argument.

Duplex power is applied to four wheels, instead of two. It exerts *fourfold* pulling capacity.

The strains are evenly distributed. That means longer wear and less repair because each wheel pulls an equal share of the load.

That is why the Duplex furnishes transportation where other power is not sufficient.

The Duplex principle *must* mean a decided saving in fuel, because all the

gasoline is turned into driving energy; none of it spent in spinning wheels.

Inconceivable as it may seem, Duplex owners show savings *on tires alone* of 30 per cent.

There comparative ton-mile costs always figured at least 20, and sometimes as high as 60 per cent less.

On every stretch of the road, good, and bad, the Duplex, using every ounce of power, all the time, on all four wheels, hauls better and saves more. And it always goes through.

You will find it to your advantage to compare Duplex performance and Duplex costs with any other method of hauling.

Cost Less Per Ton-mile

Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT?

PRESCOTT'S VALVE CONTROLLER

Waubashene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now, after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,

(Signed) D. B. Anderson,
Chief Engineer,

Do you know that the centrifugal force in belts at high speed reduces their driving power until at about 9600 F. P. M. a belt is incapable of transmitting power? All such factors are taken into account by our Engineering Department when they design standardized belt drives. Consult them about your problem.

This is a 12-inch Spartan Double Belt, operating a 50 horse-power Gas Compressor. Its cost to date is $\frac{1}{2}$ c per horse-power per week. When this belt had been in use 18 months, the engineer wrote us that it had given double the length of service of belts previously used. This has now been in use over four years and is still going strong.

TOP NOTCH

This is another case where top-notch efficiency and economy have been obtained by simply installing the right belt for the work to be done.

For many years Spartan Belting has been dominating the hard drives that destroy other belts. That experience ranks it as top notch in leather, in tannage and in workmanship. It is unusually pliable, wonderfully elastic, it is the greatest of pulley grippers and without an equal for high speed, overload drives or where unfavorable conditions exist.

Spartan well exemplifies the three principles back of Graton & Knight Standardized Series Leather Belts: First, they are made of the right material—leather. Second, they are tanned in our own tannery specifically for belting use, thus assuring the right kind of leather. Third, they are graded into a Standardized

Series—a belt for each class of power transmission requirements—standardized in manufacture and standardized for the work to be done.

Certain articles can be tested in a short time—not so belting. It takes years to test out the correctness of principles applied in power transmission. The result of 60 years test of experience is that Graton & Knight Standardized Series Belting, the highest in grade, is also the most widely sold. That is a significant combination: highest quality—largest sale.

Many of the best belted plants ask us to specify the belting for every drive. Try the plan yourself. Then, when buying, call for "Graton & Knight — Brand or equal." This won't commit you to buying our belts. It will put your buying on the one basic consideration—the work to be done.

Write for book on Standardization as applied to Belting

BRANTFORD, ONTARIO, CANADA

NEW CHAMPION EDGERS

For Fast and Accurate Cutting

WATEROUS NEW CHAMPION EDGERS are built with 40", 48", 56", 60" and 72" opening. They carry as many as four movable and two stationary saws without difficulty.

These edgers cut true and to dimension at all times. The guides are rigid and cannot shift in the cut. They are crowded to correct position and held immovably in place by a steel setting gauge that drops upon them. No other Edger has this feature.

An Edger for 6" Cants.—You can put a 6" cant through this edger and know it will come through edged to a hair. Edger carries 22" saws, 6" saw collars, leaving 7" clear saw blade, more than enough margin for 6" stock.

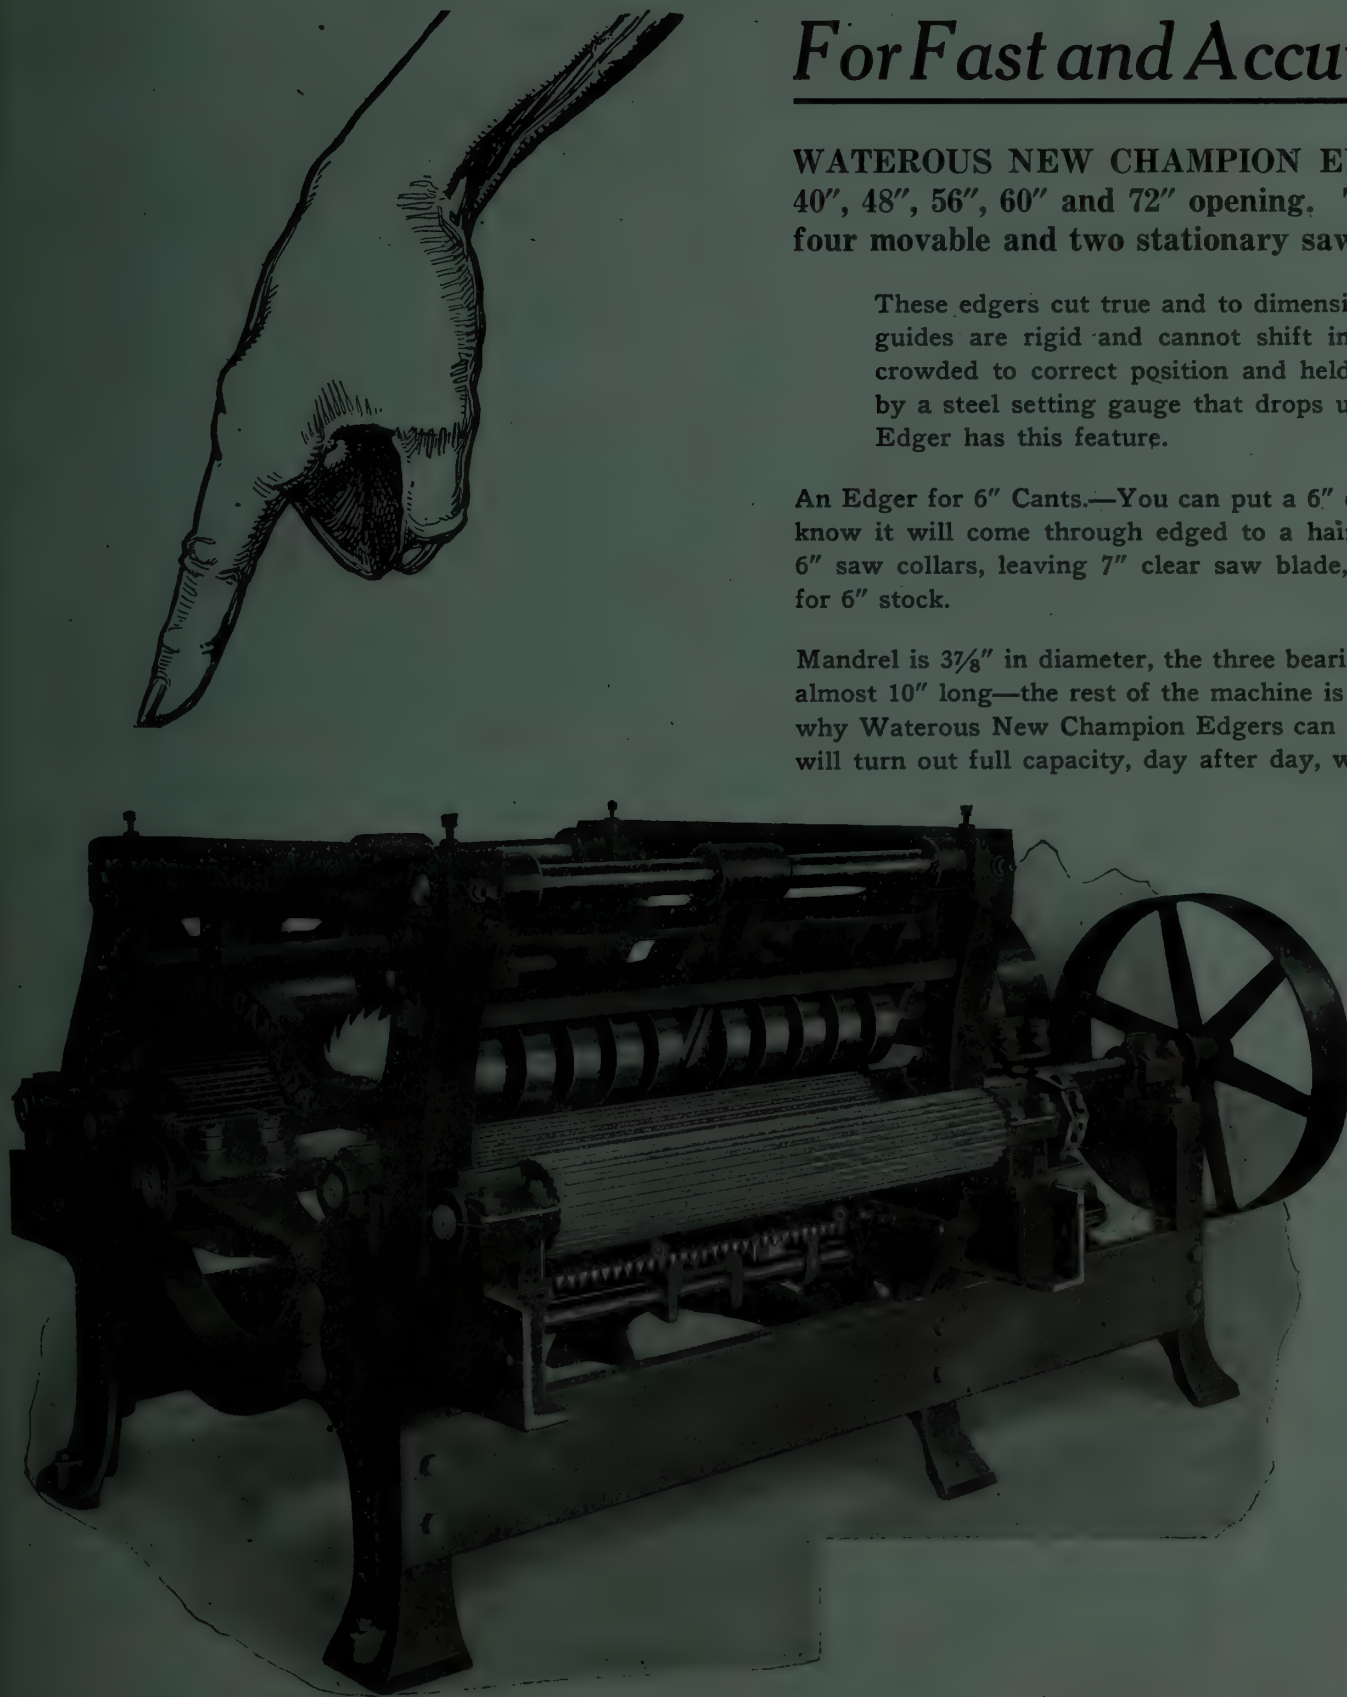

Mandrel is $3\frac{7}{8}$ " in diameter, the three bearings that support it are each almost 10" long—the rest of the machine is built in proportion. That's why Waterous New Champion Edgers can be crowded to the limit and will turn out full capacity, day after day, without falling down.

Notice the feed rolls, two before and two behind the saws. They are machine fluted to give a firm, secure grip on the timber that holds it fast, but will not mar it in any way.

The press rolls are divided, too, making both sides of the machine independent of each other. It's a worth while feature decidedly.

We manufacture up-to-date machinery for Saw Mills of any capacity, either circular or band.

There are 75 years experience behind every article turned out.

REFUSE BURNERS

We can handle to good, quick advantage your order for Refuse Burners, Tanks, Smoke Stacks or any kind of Steel Plate Work.

Need any grey iron castings? Come to us for them—up to 15 tons. We make Boilers—all sizes for all duties. Just one quality—the *BEST*.

Engineering & Machine Works of Canada, Limited, St. Catharines, Ont.

Eastern Sales Office: Hall Machinery Co., Sherbrooke, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

 PENETANG

"WELL BOUGHT IS HALF SOLD"

UNIQUE !

This word applies to

OUR

WHITE PINE

Why?

BECAUSE:

Logs—Come from best White Pine section in On-
 tario.

Manufacture—Unsurpassed. Modern, up-to-the-
 minute mill equipment insures this.

Grading—Careful, uniform and of sufficiently wide
 range to give the customer just what
 he requires.

Have you used our White Pine?

A trial order will convince you that it really does
 stand in a class by itself.

Books For Sale

Special Prices

"A Manual for Northern Woodsmen," by Austin Cary. Published in 1918 by The Harvard University Press, Cambridge, Mass. 302 pages and illustrations. Price \$2.75.

Baughman's "Buyer & Seller." The handiest labor-saving book for lumbermen ever devised. Desk size, 300 pages, \$3.00. Pocket edition, 188 pages, \$1.50.

"Baughman's Cost Tables" for figuring cost of any article by the foot, piece, pound or ton. 127 pages, 5 1/4 in. by 7 in. Price, flexible leather, \$1.50; flexible Morocco, \$2.50.

Chapin's Lumber Reckoner, valuable in the saving of time, labor and errors. Size 4 in. x 7 in., 171 pages. Price, cloth binding, \$2.25, Morocco, \$3.25.

"Climax" tally book, bound in sheep, with hand straps. Size 4 1/4 x 8 1/4, 110 pages. Price \$1.00.

"Lumberman's and Logger's Guide," just published by the author, Bernard Breton, size, 6 in x 9 in., 136 pages, dealing with the merits and uses of Douglas Fir, California Redwood and the

leading Commercial Woods of the Pacific Coast. Contains Log Tables and other useful information. Price \$1.00.

"The Kiln Drying of Lumber," a Practical and Theoretical Treatise, by Harry Donald Tiemann, M.E., M.F. Just published by J. B. Lippincott Co. 314 pages, illustrated. Price \$4.

Seasoning of Wood; A Treatise of the Natural and Artificial Processes Employed in the Preparation of Lumber for Manufacture, with Detailed Explanations of its Uses, Characteristics and Properties, by Joseph Wagner. Published by D. Van Nostrand Co., in 1917. 274 pages, illustrated. Price \$3.00.

The Preservation of Structural Timber, by Howard F. Weiss. Published in 1915 by McGraw-Hill Book Company, 312 pages, illustrated. Price \$3.

Utilization of Wood-Waste (Second Revised Edition), by Ernst Hubbard. Published in 1915 by Scott, Greenwood & Sons. 192 pages, illustrated. Price \$1.50.

Vest Pocket Ready Reckoner for Lumbermen. 11th edition. Published by the American Lumberman. Price 35 cents.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 39 Toronto, August 15, 1919 No 16

The Revival of Building Operations

All classes of lumbermen are vitally interested in construction. This is a truism that requires no elaboration. Hence the lumber trade will note with satisfaction the revival that is taking place in building. Reports from all over the Dominion indicate that the long depression, dating from the outbreak of war, is passing away, and that there are signs of a new era.

There is plenty of scope for this return to better conditions. There is no doubt that the public lost confidence in building. During the war the Federal, provincial, and municipal authorities, as well as companies, firms and private people restricted their investments in brick and mortar and in other work to the barest necessities. Of course, a considerable amount of construction, in the form of factories, was compelled by the rise of the ammunition industry, but in other directions the expenditure was very small.

An adverse factor was the steady rise in the cost of building material. Lumber, it is true, did not advance in proportion to some other materials, but the general tendency was upwards. Many people postponed work in the vain hope that prices would come down—the contrary was the case, and for the best of all reasons—labor, which is the main factor in the cost of building, demanded more pay, and got it. Some classes of material, too, were scarce, and advanced.

Apparently many of the projects which were postponed are now being proceeded with. Many of the public which have money to spend on building have, it would seem, come to the conclusion that prices will not be scaled down, and that construction will not be cheaper for some time. Some commodities have fallen, but others and labor have, per contra, advanced; it is likely, moreover, that lumber, to take one item, will be dearer. Some architects and engineers state that if materials were on a lower basis more work would come out, particularly in the way of houses, as at the present cost it is almost impossible to build and obtain an adequate return on the expenditure. While this may be true in many instances, the fact remains that all

conditions are against reduced costs. The increase in the volume of contracts let is evidence that this is being recognized. In Montreal and Toronto the building permits for July were the largest since the war.

Canada is following the example of the States, which are now freely buying our lumber. The outlook here is decidedly good, with indications of a substantial recovery this fall and next year.

Eliminating the Narrow Viewpoint

The vision of some men, as well as of some communities, is lamentably restricted. They judge the importance and significance of all problems largely from a selfish and narrow standpoint. Certain organizations, like certain individuals, are seemingly incapable of taking a broad and comprehensive grasp of any phase of activity or development that partakes of a national character or upbuild. They have not developed the facility of seeing the other fellow's viewpoint. It is wise to look upon both sides of every question and, after weighing the pros and cons come to a calm, dispassionate decision.

For a number of years now the Ontario Department of Lands, Forests and Mines, like similar departments in New Brunswick and Quebec, has been exercising rigid regulations so far as the burning of slash by the settlers is concerned. Slash has been described as "the garbage of the forest." Its ignition at ill advised times and under unfavorable conditions has resulted in untold damage. Like many stupendous events in life, which have a small beginning and expand through the course of time and action, so a forest fire may start from a tiny brush blaze—the perpetrator little thinking of the immense havoc that may be wrought by a strong wind, dry undergrowth or other contributing agencies.

Considering the ravages of flame in 1911 and also the great holocaust in 1916 in Northern Ontario it is difficult to believe that after these terrible experiences anyone would come forward with the suggestion of continuing menacing practices. The agitation for free running fires, in order to clear off the land for settlement, is still in the air and letters appear in the columns of the press in Northern Ontario, from alleged "friends of the settlers," setting forth the right of the struggling farmer to fire his slashes whenever he feels so disposed, irrespective of time, conditions, preparations or surroundings. The latest of these newspaper pleas appears in the Cobalt Nugget of recent date, signed "Settler." In two columns of complaint regarding the hardship of having to take out a permit before lighting his land-clearing fires, "Settler" never once mentions the fact that unbridled freedom in setting fire to forests in Northern Ontario has on more than one occasion established a chain of graveyards from New Liskeard to Cochrane, says the Canadian Forestry Journal. In countries with the peculiar conditions of Northern Ontario no method has yet been discovered for "burning off the country" without burning up the people. The 1916 disaster which supplied columns of anguishing details was the product of unrestricted settlers' fires. Any modification of the present provisions would deliberately withdraw the chief safeguard thrown about the thousands of men, women and children now resident in the Claybelt.

Should Pulpwood Embargo be Extended?

The press of Northern Ontario is clamouring for the Legislature to pass a measure shutting off the exportation of pulpwood, even from freehold lands, to the United States. This problem has long received consideration and sporadic efforts have been made from time to time to induce the Federal government to take a determined stand in this direction. French Canadian representatives and other M.P.'s have always contended strenuously against the passing of such a bill. It was feared the United States, which in 1918 obtained from Canada 1,325,565 cords of the value of \$8,339,278, might retaliate by placing an embargo on anthracite coal or pursuing some other course in reprisal that would be inimical to the expansion and operation of Canadian industries. Drastic measures have to be considered from more than a selfish standpoint and moderate means are always

preferable to extreme ones, except in isolated cases. The sectional viewpoint largely prevails in the agitation now and then heard for restrictions to be placed on all wood coming off private lands.

For some years legislation has been in effect in Ontario, Quebec and New Brunswick, distinctly setting forth that no pulpwood can be shipped from Crown lands except that it first be converted into pulp or paper. To extend the embargo to private holdings aroused the opposition of certain members of parliament, who were apprehensive of retaliatory measures from "Uncle Sam." They also feared that the settlers in certain portions of Northern Ontario, as well as in the province of Quebec—if absolutely no export of pulpwood was permitted—would be at the mercy of local pulp and paper companies who could possibly dictate terms and make their own prices for wood. As it now is, the settler has the United States market open to him and is not confined in his negotiations for the sale of his annual cut to one source only. Monopoly is frequently the fruit of restriction and, as the settler depends a great deal on the revenue obtained from his wood in order to carry him through the first few years of his struggle he desires to sell in the dearest market, and if this were shut off existence would be all the more trying and difficult.

One paper in Northern Ontario in upholding the contention for the total prohibition for the export of pulpwood, takes the following view of the situation:—

"The war came and revealed the really desperate condition in which many of the mills in the United States find themselves. The wood from Canada is keeping them alive. If the supply were shut off the mills would either go out of business or remove to this country. We hold the situation in the hollow of our hand. The question for the government to decide is whether it is better to take all there is in the trade, or be the simple hewer of wood. This question must be settled and settled in the true interests of the north country, which is the interests of the province as a whole.

"The answer must not be left until the forests are depleted as was the case with the pine, but must be answered now when there is yet time to establish the paper business on the basis which our resources warrant."

Speaking along this line, J. A. Bothwell, of East Angus, Que., who is president of the Canadian Pulp and Paper Association, says: "The moral for Canada is that not only must this country continue the restrictions now imposed upon the exportation of pulp wood, but we must, if we would enjoy the full benefits of our heritage, apply them more intensively. This becomes all the more important when we realize that our supply of wood, far from being inexhaustible, is diminishing at a rate which threatens its complete exhaustion within a comparatively few years. The inroads made by the paper manufacturing industry are not the only source of diminution of our pulpwood forests. Fires, insects, and fungus growths all contribute to the destruction. A blight known as the budworm has recently worked an enormous amount of damage to the pulpwood limits of Quebec, destroying practically the entire stock of balsam and injuring other forest species. Neither the natural re-growths nor artificial propagation, as at present carried on, can possibly overtake the rate at which our pulpwood resources are being depleted by these several means. The most serious problem in the industry to-day is how to bring to bear ways and means that will result in perpetuating our pulpwood supplies and thus continue the industry as one of the premier wealth-producing agencies of the Dominion. The larger the returns we receive for our pulp and paper exports the better able will we be to provide these ways and means.

"Most of the wood now exported in its manufactured state is cut from freehold lands and settlers' lots, and while it is in great demand and furnishes a source of temporary income appreciated by the owners and settlers, the policy which permits it to be done is short-sighted in the extreme and the practice one that ought to be discouraged."

It would appear that the question of placing an embargo on all pulpwood is about as vexatious in character and complex in effecting a satisfactory solution as the tariff issue, total prohibition, collective bargaining, national ownership of public utilities or the re-

construction and re-establishment processes following the war. All require much thought, labor and study to adjust wisely and well and with the idea in view of effecting the "greatest good to the greatest number."

The Value of Educational Outings

The business man who can unshackle himself from the cares and worries of his own immediate interests and betake himself to another scene for a holiday, generally comes back refreshed and invigorated to resume his work where he left it off. On his return he discovers that things have gone on just about as well or even better than if he were "Johnny-on-the-spot." It is almost impossible for some of us to get away from delusions. The more we are inclined to think along certain lines and raise mental barriers, the more convinced we become that our business could not really go along without us and that it is quite impossible to take a vacation like other fellows and, amid new associations and other scenes, while away a few days or weeks. To shatter this hallucination sometimes requires the visitation of a prevalent malady or accident; then the average mortal suddenly realizes in his isolation and detachment of how little consequence he is after all in the scheme of mundane affairs.

It is often difficult to displace personal prejudice, uproot distorted ideas or undermine cherished traditions, yet it is being done on every side by the progressive sweep of world-wide events. Capital and labor are learning to appreciate that more time is needed for recreation and play. The trouble with most of us is that we take ourselves too seriously and in order to get out of this frame of mind or self-centred groove there is nothing like a genuine, care-free holiday.

What good-will, unity and co-operation is doing in commercial and industrial ranks is evidenced on all sides. The midsummer annual outing of the Ontario Retail Lumber Dealers' Association is more largely patronized each year and the recent educational trip saw some seventy representatives gathered from various points in the province. They visited a dozen sawmills and woodworking plants and witnessed, under the most favorable auspices, the methods of manufacture of all kinds of forest products; gained a wider and more thorough acquaintance of the goods they handle and were enabled to gauge the other fellow's problems as well as give some heed to their own.

Too frequently in our own restricted interests, we are inclined to believe that the barriers and snags are along our own journey and the retailer is disposed to think the other fellow, such as the manufacturer and wholesaler, follow a primrose path. It is only by the interchange of views, visits and visions that one's conceptions grow larger, one's sympathies broader and the grasp of the great game of business more kind.

Then there is the social side of such jaunts, where fellow dealer meets fellow dealer and swaps experiences. Each comes away feeling that the other is a pretty good sort after all and that the struggle is really worth while. The man from the east who converses with the man from the west and the chap from the south who chats with one from the north, discovers, in mutual interchanges, that all retail lumbermen have about the same triumphs and trials, successes and failures, hopes and disappointments, no matter where they are located.

In other words, the lumber business is like a great human family. In aims and achievements, purposes and pursuits, all its exponents find the same incentives and emotions, pleasures and perplexities. The one who is inclined to grow weary or downhearted, or halt by the wayside, is stimulated to greater activity and fresh endeavor on hearing a narrative of some other fellow's struggle, and comes to the conclusion, "Well, if he conquered so can I." At it he goes again with stout heart, clear conscience and determined effort—and, best of all, he wins out.

The railways are making ready for another advance in freight rates but not a word is heard from them regarding more efficient service.

Ontario Lumber Retailers Visit Many Mills

Midsummer Educational Outing Attracts Representative Dealers from all Parts of Province—Enjoyable Trip to Busy Georgian Bay Towns

Well managed, enjoyable and successful in every respect was the annual midsummer educational outing of the Ontario Retail Lumber Dealers' Association, which was held from Thursday evening, July 31st, to Monday evening, August 4th.

The objective points were Penetanguishene, Midland, Victoria Harbor and Parry Sound. The welcome accorded the visitors at all of these centres, both by the lumbermen and the citizens, was cordial and sincere and the memory of the trip will live long in the minds of the seventy representatives of the retail ranks who had the pleasure of participating in the proceedings. Everything was admirably arranged and each event was carried out promptly and agreeably. There were no delays and no disappointments—in fact, the itinerary from the time that the party left Toronto by G. T. R. in a special pullman car at 5.50 on Thursday afternoon, July 31, until the return home at the same hour on Monday evening, August 4, was closely followed. The retailers were loud in their expressions of satisfaction at the enjoyable associations of the journey. Many of them learned and saw a great deal more in the few days' jaunt than they would hanging around their own yards in a year. They gathered much information anent the various processes of manufacturing lumber from the stump to the pile and became acquainted with the different kinds of mill equipment—cutting, edging, trimming, grading, sorting, piling, shipping, etc. They grew familiar with all these problems, first-hand, and came home with a wider knowledge of the importance and greatness of the industry they represent and a more adequate appreciation of the difficulties and handicaps which manufacturers have to overcome—particularly during the present trying period when labor is restless, the market particularly active and men in some centres difficult to procure.

The First Leg of the Journey

Arriving at Penetang at 10 o'clock the party were met by W. F. Beck, chairman of the local reception committee, and Mayor C. E. Wright and members of the city council and board of trade. The delegates were soon comfortably quartered at the different hotels in that progressive town. After all had been assigned to their respective rooms, word was passed round that a reception was to be tendered

municipal council and the board of trade had joined together in tendering them the reception at which they were present and in providing the repast of which they had just partaken. He assured the lumbermen that the freedom of Penetang was theirs and that the town constable had been locked up for the night. It was, indeed, a pleasure to greet so many representative business men and he trusted that their stay—brief though it was—would be both profitable and instructive.

In the absence of Thos. Patterson, of Hamilton, president of the Ontario Retail Lumber Dealers' Association, who was on a trip to

Viewing yards and stock of lumber at Victoria Harbor

the south, John B. Reid, of Toronto, vice-president of the Association, delivered one of his optimistic and breezy addresses. On behalf of the organization he thanked the Mayor and the people of Penetang for their cordial welcome. The reception was certainly something that the lumbermen had not been looking for, and it was, therefore, all the more pleasant, coming as it did in the nature of a surprise. Mr. Reid stated that the retail lumbermen were there this evening as a result and as the fruit of an organization which has been formed less than two years ago. It was the custom of the members to take trips now and then for educational purposes and also to cultivate the spirit of co-operation and sociability.

The Broadening Effect of Organization

Mr. Reid enlarged upon the benefits of friendship and mutual confidence in business, and how associations broadened a man's ideals and sympathies. He came to realize that there was some good in the other fellow, as well as in himself. Three years ago the members of the retail lumbermen in Toronto were composed largely of grouches and cranks, and today you could not find one in the ranks; that was what association had done for the dealers of the Queen City and the movement had extended throughout the province and even to the ranks of the wholesalers. They had learned a lot and been taught to appreciate one another and, in the spirit of harmony and co-operation were marching on to better and brighter things. Life was larger than the dollar, and sordid self should not take possession of men's souls. The fellow who shed gladness and sunshine about him and gave a cheery smile and a welcome word to his fellowman was worth much more to himself and the community than the miserable wretch who chased life only for all the gold he could get out of it and in the end passed away mourned by none of his fellows.

In a more humorous vein Mr. Reid pointed out that some of the retail lumbermen present had been handling lumber all their lives, yet had never seen the inside of a sawmill. They had come up to Penetang to find out things, and, more particularly, discover the firms who made the culls. He was certain that no one would dare ship out culls to members of the Association after their trip to Penetang, as the offenders would be spotted.

It appears that Penetang is organizing a Board of Trade, and

The retail lumbermen aboard Manley Chew's tug at Midland

the visitors in the spacious Sunday-school Hall of All Saints Church. There the lumbermen repaired and found a tasty and varied menu awaiting them, both for the intellectual and the inner man. The tables were laden with all the good things that could be provided and amid the exhalation of smoke from the fragrant havanas, the yardmen and their friends sat down to enjoy an hour or more of song, music and speech. Local talent contributed materially to the enjoyment of the occasion and Penetang certainly has some clever artists.

C. E. Wright, Mayor, welcomed the retail lumbermen on the occasion of their first visit to Penetanguishene, and said that the

Mr. Reid was asked by Mayor Wright to give the citizens some ideas of how to undertake the work successfully and to outline in what way the institution might be of the greatest benefit and service to the community. Mr. Reid then took up in detail the work of the Toronto Board of Trade, informing those present how it is divided into sections, each having its own particular interests and dealing with its own peculiar problems, yet on the larger and more vital questions having the backing and support of the whole body or institution. He referred to the formation of the Lumbermen's Section, which had in three years become the most influential section of the Toronto Board of Trade.

The Benefits of the Credit Bureau

Everything relating to the lumber industry is now harmonious and the members have ceased cut-throat practices and eliminated petty jealousies and distrust. Out of the Lumbermen's Section has grown the Credit Bureau, which is a distinctly useful institution, and any member can speedily tell when an application is made for credit whether to extend it or not. So valuable has become its work and worth that, at the last annual meeting, the membership fee was raised to \$100, and the regular dues had to be paid by the members, as well, added Mr. Reid, who went on to say that owing to the well balanced service and operation of the bureau losses had been practically wiped out. Out of the credit bureau of the retailers had grown the credit bureau of the wholesalers, who had also formed the Wholesale Lumber Dealers' Association. The big men had seen how well smaller ones had got along through association and had decided

Taking in the beautiful vistas of the Georgian Bay

to copy their example. The retailers had built up their present prosperous body upon the principles of sociability, honesty and integrity, all of which formed a solid foundation. They had confidence in themselves and in one another and believed that the other chap should have a chance to go ahead and prosper as long as he conducted his business on a fair and honorable basis.

Horace Boulton, secretary of the Retail Lumber Dealers' Association, followed in a short address recounting his early visits to Penetanguishene many years ago. He dwelt appreciatively on the hospitality of the town and referred to the encouraging progress of the Ontario Retail Lumber Dealers' Association, which now had 166 members in good standing and is growing all the while. Mr. Boulton said they had a large program to carry out during their stay and it was important that everybody should be on time for each event. He also spoke hopefully regarding the Wholesale Lumber Dealers' Association, which had become incorporated and now had 35 members. Both the wholesalers and retailers, through the mediums of organization, were learning to appreciate and know one another better. The attitude of the wholesalers toward the retail men had changed considerably so that any small man was now assured of courteous treatment and consideration of just claims when presented.

G. B. Van Blaricom, editor of the "Canada Lumberman," made a few closing remarks, speaking briefly on the advantages of organization and the importance and educational value of the trips taken by the retail lumbermen. The attendance every year showed a gratifying increase, which was indicative of the benefit of such outings.

The proceedings closed with the singing of the National Anthem and three hearty cheers for the chief magistrate and lumbermen of Penetanguishene.

The next morning automobiles were at the hotels shortly after

eight o'clock. The cars were kindly placed at the disposal of the visitors by the local lumbermen and merchants, and for three hours the various industrial plants of Penetang were visited. The first mill that was inspected was that of W. J. Martin, which is driven by 100 h.p. motor and is the only electrically-driven sawmill in the province. Then followed in succession visits to the industries of Gropp Bros., Fibre Products, Limited, which is greatly increasing its output; Firstbrook Bros.' box plant; McGibbon Lumber Co.'s mill, and then the two sawmills, the planing mill, pail and tub factory, box plant and other departments of the C. Beck Mfg. Co. Then a stop was made at the Gidley Boat Works and the next industry inspected was the Dominion Stove & Foundry Co. Afterwards a drive was enjoyed round town and a visit paid to the asylum for the insane (which years ago was a provincial reformatory for incorrigible boys). W. F. Beck, G. A. Beck, Finlay McGibbon, W. J. Martin and others did all in their power to make the industrial tour pleasant and instructive.

The travelling lumbermen were next conveyed by automobile to the neighboring town of Midland, where they had dinner at the Queen's Hotel. Afterwards, in motor cars provided by the town and the citizens, visits were paid to the busy plant of Manley Chew, ex-M.P., who extended hearty greetings to the guests. This is, undoubtedly, the fastest producing sawmill in the whole Georgian Bay district, turning out one-quarter of a million feet of lumber every twenty-four hours, the plant running day and night. The enterprise of the Georgian Bay Shook Mills (now Midland Woodworkers, Limited), of which R. H. Scribner is in charge, next came under the review of the sightseers. Various processes of manufacture were closely followed, and the output of the company afforded much scope for inquiry and favorable comment. The motor cars were again filled and a trip taken through the extensive yards of Chew Bros. One outstanding feature of this plant is the splendid fire protection system. Ed. Letherby, managing-director of the firm, was on hand and made everything enjoyable for the visitors as they were conducted through the various departments, including the lath and picket sections. A visit was paid to the plant of the Midland Woodworkers, Limited, which turn out doors, columns, sash and mouldings of all kinds. M. J. Bray acted as guide, counsellor and friend, and the neatness, order and arrangement of all departments aroused more than passing interest.

The Boat Trip to Honey Harbor

Returning to the Queen's Hotel the members of the party soon made their way to the wharf, where the steamer "Tenno" was boarded for a trip down the inside channel of the 30,000 islands of the Georgian Bay, and after a sail of a little over an hour, a short call was made at the Royal Hotel, of which Grise Bros. are proprietors. It had been arranged that the retail lumbermen should partake of dinner there at a later hour, and, pending its preparation, the journey among the many islands was resumed, the boat travelling amid scenes and narrow waterways not usually witnessed by the average tourist. Everywhere salutes and greetings were exchanged with the cottagers, and at 7.30 o'clock a return was made to the hotel, where the guests sat down to an admirably prepared and splendidly served dinner. It was one of the best arranged and excellently conducted social affairs.

At the close a vote of thanks, moved by J. B. Reid, and seconded by W. B. Tennant, was moved to Ed. Letherby, of Midland, for his kindness and courtesy in doing so much to make the lumbermen's visit entertaining and edifying. Mr. Reid spoke in the highest terms of Mr. Letherby's integrity, kindness and useful public career, he having for several years been Mayor of Midland, of which town he is one of its most influential and upright citizens.

Mr. Letherby in reply disclaimed any special praise for what little part he has played in the entertainment of the party. He trusted that they would have, as a result of their visit, better ideas of the serious problems which manufacturers had to face. Getting out the timber, conveying it to the mill and sawing it into lumber was not all sunshine, as costs were increasing very rapidly and labor was becoming most insistent in its demands. The lumbermen's road had not been an alluring one during the years of the war, and many a dollar had been invested without the sight of another one in return. The disbursements for timber limits, logging, driving, towing and other overhead expenses, were increasing all the time and the total extra cost from the stump to the finished product would, he estimated, be all the way from 25 to 40 per cent. over that of a year ago. He was very glad to see so many lumbermen present on an occasion of this kind and was sure they would take away with them many happy and delightful memories of their visit to Midland.

C. A. McDowell, Mayor of Midland, added a few words of greeting, and told of the pleasure which it gave the town to entertain the visitors. After three cheers for mine host Grise, of the Royal Hotel, the party set sail on the "Tenno" on the return trip to Midland, which was reached shortly before midnight.

Early on Saturday morning, before the average citizen in Midland had withdrawn himself from the coverlets in his sleeping quarters,

Manley Chew, ex-M.P.,
Midland, Ont.

the sojourning lumbermen were wide awake and partaking of a hearty breakfast. Manley Chew had kindly placed one of his tugs at the disposal of the visitors and equipped the steamer with chairs so that all rode in comfort to Victoria Harbor, first paying a short visit to Port McNicoll, the eastern terminus of the Great Lakes Navigation Co. Arriving at Victoria Harbor about 9 o'clock the members of the delegation were cordially greeted by G. E. Spragge, sales manager of the Victoria Harbor Lumber Co., and Jerome Duckworth, manager of the manufacturing end. They were conducted through the saw and planing mills and afterwards made a tour of the extensive yards and stock. Everything around the premises, both interiorly and exteriorly, betokened neatness, method and dispatch. The great lumber industry of Victoria Harbor was founded many years ago by the late John Waldie, and around it has been built up a solid and contented village.

At noon in the Royal Victoria Hotel the sight-seeing yard-men sat down to a splendidly served and temptingly prepared repast as the guests of the Victoria Harbor Lumber Co., of which F. N. Waldie is president. The preparation of the viands and the execution of the service had been left in the hands of the good ladies of the Presbyterian church, who left nothing undone to see that all appetites were appeased. G. E. Spragge presided.

Mr. Wm. Laking, of Hamilton, head of the Wm. Laking Lumber Co., arose amid applause and stated that before taking departure, he, being the oldest member of the party, would like to say a few words in respect of the splendid treatment the manufacturers had accorded the retailers throughout this trip. "They have used us royally, not only here, but in Midland and Penetanguishene," continued Mr. Laking, "and we will all have the desire to come back again. The present outing has been a most successful one in every way. It has been a time of education and pleasure. I, myself, feel that I am a link between the past and the present, and as I have wandered around the yards here to-day, I have been reminded of the scenes of years gone by and many old lumbermen friends in this

district who have passed to the Great Beyond. I have not time to refer to them personally but their memory is fresh and green. They lived useful and honorable lives and the lumber industry today is the better owing to the part they played in its upbuild and development."

Continuing, Mr. Laking referred in grateful terms to the ability and faithfulness of Mr. Boulton, secretary of the Ontario Retail Dealers' Association, and the great benefits accruing from association. He felt that no small amount of praise, not only of the present enjoyable trip, but also of the credit bureau, was due largely to the energy and foresight of Mr. Boulton. Reverting to the social side of such outings as the present, Mr. Laking said that sociability had been too much neglected in the past, and the present age is moving along in the direction of more sociability and co-operation. The speaker added that he had seen more of life than anyone else in the room and he believed that Canada was the best country on the face of the globe and that Canadians were as good a people as were to be found in any land.

Tendering Thanks to the Manufacturers

Mr. John B. Reid, in seconding Mr. Laking's vote of thanks to the manufacturers in general, and the Victoria Harbor Lumber Co. in particular, for their hospitality, naively said that the lumber manufacturers had, at least, learned to appreciate the hard work of the poor retail man. An association has been organized in the retail ranks to do good to the members as a whole and there was no necessity of dwelling at any length on the success which has characterized the association. They had evidence of it on all sides in the present gathering. The speaker praised the menu provided by the ladies and the warmth of welcome which had been extended by the Victoria Harbor Lumber Co. All members could, as individuals, do much to make the association an even greater success than it had developed into and to cultivate more brotherly love and friendship in the retail ranks. Mr. Reid said he was glad to hear Mr. Laking refer to the

A. E. Beck,

G. A. Maclean,
of the Conger Lumber Co., Parry Sound

John B. Reid, of Toronto,
Vice-president of the Association

Horace Boulton, of Toronto,
Secretary of the Association

social benefits derived from such gatherings and felt that all would re-echo the sentiment that, through co-operation and mutual helpfulness, cut-throat methods were among the relics of the past, and today there had been ushered in friendship and brotherly love, which augured well for the future weal of the industry in all its varied activities.

Mr. Spragge, replying on behalf of the Victoria Harbor Lumber Co., said he felt extremely flattered by the remarks that had been made and added that the ladies of the Presbyterian Church were responsible for the high character of the luncheon. "It has been a great pleasure for us to have you with us," concluded the speaker, "and we hope you will all come back again when we will endeavor to give you an even better time than we have on the present occasion." A hearty vote of thanks was moved to the Ladies Aid by W. C. Irvin, who paid them not a few compliments in the course of a happy speech. This was seconded by T. E. Paterson and carried unanimously. Rev. A. E. Neilly, pastor of the Victoria Harbor Presbyterian Church, replied in a humorous vein.

Another resolution carried was that of appreciation of the work and worth of Secretary Boulton, which was moved by Mr. Laking and seconded by Mr. Fred Taylor, of Hamilton.

On the Way Up to Parry Sound

The diners then made their way to the steamer, and once more aboard Manley Chew's tug set sail for Penetanguishene, where the twin-screw steamer "Waubic" of the Northern Navigation Co., was taken for a trip to Parry Sound. At Victoria Harbor about 15 or 20 members of the party, who could not remain over Sunday and Monday, departed for their respective homes, amid the hearty cheers of the remainder of the company.

Nearly fifty happy excursionists enjoyed the delightful voyage

The arrival of the party at Honey Harbor for evening dinner

amid the 30,000 island route to Parry Sound, a distance of some 65 miles from Penetang. The steamer called at the summer resorts of Honey Harbour, Minnecog, Whalen's, Go-Home Bay, Wahwahtaysee, Manitou, Copper Head, Sans Souci and Rose Point, arriving at Parry Sound shortly after 9 o'clock in the evening. The various cottages all appeared to their best advantage and at every port of call there were gasoline launches and put-puts galore, while many witty sallies were exchanged between the tourists on the docks and the sightseers on the deck of the "Waubic." Arrived at Parry Sound the travellers were warmly greeted by Mr. Fitzgerald, representing the Conger Lumber Co., of which W. B. Maclean is president, and escorted to the Hotel Belvidere, which occupies a commanding position overlooking Georgian Bay. The two days at Parry Sound were spent pleasantly in visiting the mill and yards of the Conger Lumber Co. and in taking in the various points of interest of this progressive town. Through the kindness and generosity of the Conger Lumber Co., the steamer "Voyageur" was placed at the disposal of the visitors, a pleasing act which the members will not soon forget. The Conger Lumber Co. also provided refreshments. Under the guidance of Secretary Boulton, some twenty-five members set out on a bass fishing jaunt. "The boys" were accompanied by Capt. E. E. Tedford, of Cork, Ireland, who is a British government inspector of the various steamers which are being turned out for overseas at the Midland Shipbuilding Co.'s plant. The captain has sailed all around the world, but it is doubtful if he ever fell in with more jolly fellows than he did on this angling expedition.

Some twelve or fifteen miles from Parry Sound anchor was

weighed and small boats taken by a number of enthusiastic disciples of Izaak Walton, who were earnest enough in their pursuit of the finny tribe to depopulate the waters of Georgian Bay so far as the bass colony is concerned. A real, old-fashioned open air lunch was enjoyed on the island, and after a stay of a few hours, the whistle of the "Voyageur" sounded shrilly, which was the signal that the piscatorial party should return to the deck. The net result of the day's catch was not as satisfactory as it might have been, as only about a half dozen bass were captured, but the anglers had all done their best, and what more can be expected of any man, or body of men!

Just before departing it was suggested that the name of the island, which had been "discovered," should be perpetuated, and upon a huge rock, in black letters, two feet deep, were printed the words "Lumbermen's Island—No Fish." When the Ontario Department of Education issues a new geography in order to set forth accurately the new boundary lines of European countries which were altered during the war, there is no doubt but that the Minister of Education will see that there is shown prominently among the islands of the Georgian Bay the one which was charted and christened by the retail lumbermen.

While they may not have been able to "discover" fish, they were at least able to explore land, and names of the members will go down with those of Columbus, Champlain, Cabot, Cartier and other venturesome spirits of historic renown.

On the return to Parry Sound the half dozen fish secured were cooked at the Empire restaurant. There were about forty fish-loving lumbermen who thought that there should be ample quantity to go round, and like the miracle of old, the catch could be blessed and made to multiply until all appetites were satisfied. No miracle man was in the company—no super-lord of creation—and less than one-half of the assembly did not have the pleasure of feasting at the bass banquet.

After a restful night's sleep the happy but tired party set sail for home. When the steamer called at Copperhead Island, Secretary Boulton left his associates to continue the rest of the journey alone. He decided to stay at this widely-known fishing resort for a few days in order to deplete the surrounding waters of the finest specimens and to show, on his return home, what a real angler can do when he sets out alone and unaided to capture the finny tribe.

The party reached home on Monday evening all loud in their praise of the success of the four days' educational and pleasure outing and unanimously declaring that next year they will be ready once more to join in a pilgrimage as bright and enjoyable as the one of 1919.

In connection with the narrative of the jaunt of the Ontario Retail Lumber Dealers' Association, no attempt has been made in this issue to describe in detail the operation of the various plants visited. Only the social and recreative side of the events has been touched upon, and in a later edition of the "Canada Lumberman" there will be presented illustrations and descriptive write-ups of the different lumber and woodworking industries.

The Members of the Party

The following is the register of those who lined up for the trip:

Piggott, P. G., Piggott Lumber Co., Chatham.
 Anderson, Roy, Consumers' Lumber Co., Hamilton.
 Anglin, F. R., S. Anglin & Co., Kingston.
 Barnes, John T., Walter Davidson & Co., Ltd., Toronto.
 Barrett, Wm., Canada Lumber Co., Ltd., Weston.
 Bond, T. G., Batts, Limited, Toronto.
 Boulton, H., Toronto.
 Bowden, H. V., Frank H. Bowden & Sons, Ltd., Toronto.
 Bryan, F. W., The Bryan Mfg. Co., Ltd., Collingwood.
 Bryan, G. E., The Bryan Mfg. Co., Ltd., Collingwood.
 Burton, F. R., Consumers Lumber Co., Hamilton.
 Cadenhead, J. K., R. Laidlaw Lumber Co., Toronto.
 Campbell, John D., Cornwall.
 Coates, Chas C., A. Coates & Sons, Burlington.
 Crosthwaite, Harvey, Patterson & Crosthwaite, Hamilton.
 DeLaplante, A. W., The Beaver Lumber Co., Hamilton.
 Doty, C. F., Oakville.
 Gillies, J. M., James Gillies & Son, Preston.
 Harper, B. L., Consumers Lumber Co., Hamilton.
 Harris, W. A., R. Laidlaw Lumber Co., Toronto.
 Henderson, A., Cheltenham.
 Henderson, Mrs. A., Cheltenham.
 Howes, G. M., Harriston.
 Ingleby, Chas. E., The Ingleby-Taylor Co., Brantford.
 Irvin, W. C., The Irvin Lumber Co., Toronto.
 Kalbfleisch, Emil, Kalbfleisch Planing Mill, Stratford.
 Kent, F., Seaman, Kent Co., Toronto.
 Laking, Wm., Riverdale Lumber Co., Toronto.
 Merkle, W. J., Boake Mfg. Co., Toronto.

Morgan, J. M., F. A. Bowden & Sons, Toronto.
 Mackenzie, J. B., Georgetown.
 Mackenzie, Mrs. J. B., Georgetown.
 McPherson, G. D., Merlin.
 Nafziger, E. R., B. & N. Planing Mill, Milverton.
 Paterson, T. A., Mickle, Dymont & Son, Toronto.
 Press, R. J., The Alliance Lumber Co., Hamilton.
 Reid, J. B., Reid & Co., Toronto.
 Rhind, A., Simpson Planing Mill, Toronto.
 Roper, C. H., John Poag & Co., Hamilton.
 Smith, Clarence M., Aylmer.
 Smith, Osborne, O. & W. R. Smith, Toronto.
 Taylor, Edwin E., Ingleby-Taylor Co., Brantford.
 Taylor, Fred D., Aitchison & Co., Hamilton.
 Tupling, W. M., J. R. Eaton & Sons, Orillia.
 Van Blaricom, G. B., "Canada Lumberman," Toronto.
 Warren, W., R. Laidlaw Lumber Co., Toronto.
 Waters, John P., Burks Falls, Riverdale Lumber Co., Toronto.
 Watt, Allan, Watt Milling & Feed Co., Toronto.
 Wells, C. M., Paris Station.
 Wells, Mrs. C. M., Paris Station.
 Williamson, Wm., Toronto.
 Schmidt, C., R. Laidlaw Lumber Co., Toronto.
 George, H., R. Laidlaw Lumber Co., Toronto.
 Boake, Roy, Boake Mfg. Co., Toronto.
 McCormack, J., Campbell, Welsh & Paynes, Toronto.
 Tennant, W. B., J. B. Smith & Sons, Toronto.
 Richards, C. F., R. Laidlaw Lumber Co., Sarnia.
 Purse, A. J., R. Laidlaw Lumber Co., Toronto.
 McDowell, J. S., Mayor of Midland, Midland.
 Thuerck, W. C., Terry & Gordon, Toronto.
 Letherby, Ed., Chew Bros., Midland.

Among the wholesalers, or the representatives who joined the party at Midland and took in the festivities, were: C. G. Anderson, Toronto; W. G. Paynes, Toronto; J. M. Donovan, Toronto; S. Dymont, C. Dymont and C. O. Cameron, of Mickle, Dymont & Son, Barrie.

Shall Sizes Continue to Shrink?

Retail lumber dealers in several of the Eastern States have been wondering why there should be a further shrinkage in the actual sizes of surfaced lumber. In some localities of New York consumers have protested against the scant sizes of lumber now being furnished by certain manufacturers. We refer to the surfacing of inch lumber below thirteen-sixteenths in thickness and to the reduction of lumber dressed four sides below one-fourth inch scant in width, says the "Lumber Co-operator."

Correspondence with associations of manufacturers indicates that the consensus of opinion is against a reduction of one-inch lumber, including flooring to less than thirteen-sixteenths in thickness. Some of the associations have rules to this effect.

The Southern Cypress Association says that for years at least 90 per cent. of the surfaced lumber has been 13/16, although it is still possible to secure 7/8 inch stock in Cypress, if it is so ordered and paid for.

The ruling of the Southern Pine Association is one inch dressed to 13/16, except for special stock, such as casings, bases, drop siding, and similar items.

The North Carolina Pine Association allows 1/8 inch for one side and 3/16 inch for dressing both sides.

The West Coast Lumbermen's Association says that it has been their practice to ship common lumber green, and their ruling now in one inch S1S or S2S, finished size 3/4 inch. Common boards S2S or shiplap to 3/4 inch. The moist climate plays an important part, and until recently no dry kilns have been successfully developed which will permit the drying of common lumber produced in that territory. This is a problem to which attention is being given at this time in the hope of finding a solution. We are informed that this organization does not contemplate any changes in its sizes in the direction of scant measures, but that on the other hand there is a growing sentiment on the part of West Coast manufacturers toward full size and a change to 13/16 inch boards.

The Western Pine Manufacturers' Association informs us that their mills are adhering to their standard sizes, viz.: inch lumber surfaced two sides is 25/32 inch in thickness; all lumber surfaced four sides is 1/2 inch scant, that is ten inch boards will actually measure 9 1/2 inches. This applies to lumber which is seasoned before surfacing. The California White and Sugar Pine Association does the same with reference to their shop and factory lumber.

The Retail Lumber Dealers' Association of the State of New York at the last meeting of its Board of Directors held on June 11, went on record as opposed to the reduction in thickness of inch lumber, including flooring below 13/16. It is also opposed to the loss of

one-half inch in width in surfacing lumber four sides and believes that one-fourth inch scant should be the limit in that direction. Our position on this subject was emphasized by Vice-President Gould at the recent meeting held at Chicago to discuss the standardization of working of lumber and mouldings. He pointed out the fact that in many cases the cutting down on widths made it necessary for the contractors to use additional stock and caused additional labor. For this reason dealers would far rather pay more money if necessary for stock dressed 1/4 inch scant than to have the widths skinned down. Secretary James R. Moorehead of the South-western Lumbermen's Association, brought out the fundamental fact that the average yard does not object to the present standard of dimension, provided that it is lived up to. He further said that it is time for the manufacturers of lumber to get together and adopt the standard of 13/16 inch thick for all dressed lumber and flooring and to live up to the practice of dressing four sides 1/4 inch scant in width.

The viewpoint of the architects was voiced at this same meeting. Their representative said that it was highly important that sizes of timbers be lived up to so that architects could know how to figure their floor loads. This they are required to do by municipal ordinances for all buildings erected in many of the larger cities of the country.

We are not alone in our contention that lumber should not be further skinned down in working. Both of the leading retail associations of Pennsylvania have already taken action and it is quite likely that other neighboring organizations will be heard from shortly. President H. J. Meyers of the Pennsylvania Lumbermen's Association which has headquarters at Philadelphia, says:

"The fact that thinner lumber may cost less than that of a proper thickness is no excuse for retailers being satisfied with such material. We must protect the consumer, for he looks to his local dealer to give him something which meets his requirements. We are the only people he can appeal to and when he finds that we are indifferent to such things, he may become one of the many who are always ready to have the state or national government regulate business.

"I hope that every time we purchase a car of lumber we will insist on nothing less than thirteen-sixteenths thickness and not more than one-fourth inch waste in the width. Tell the salesmen who visit your offices that we are in earnest in this matter and that our campaign is not merely to have a question to talk about in our annual meetings. I have found many salesmen anxious to co-operate with us and not one who thought otherwise. When they come in contact with their sales managers, they will report our attitude and some good results will follow."

Destruction of Shade Trees

For years past there has been a gradual dying out of shade trees in the city, says the "Montreal Star." Spasmodic efforts have been made to save them, but little of a practical nature has been accomplished. One cause for this is the meagre amount set aside for tree culture and planting. This city spends less on such work than any other of its size on the continent. In many of the big United States cities the importance of making streets attractive by the planting of shade trees, is demonstrated by their appointing special commissions who have sole charge of this branch of the civic service. The results thus obtained have been most satisfactory.

So far as Montreal is concerned, there is room for great improvement in the system of caring for trees. A special tree commission is sorely needed here as elsewhere. If such a commission had been appointed years ago the trees would not have been in their present forlorn condition.

In many of the streets running north from St. Catherine Street trees have been ruthlessly slaughtered. Electric companies and householders are both to blame for this. The spectacle of slowly dying trees can be seen all over the city. Unless a halt is called it will not be many years before Montreal will be peculiar for its lack of trees in the streets. The subject is important enough specially to occupy the attention of the Administrative Commission.

Will Construct Slides and Piers

A provincial charter has been granted the Sucker Creek Timber Slides Co., with a capital stock of \$15,000, and headquarters in Port Arthur. The object of the company is to construct slides, piers, boom and other works necessary to facilitate the transmission of timber now in Sucker Creek in the unsurveyed area lying immediately west of the township of Hele in the district of Thunder Bay, from a point where the Creek enters the Black Sturgeon River to Sucker Lake, a distance of 17 1/2 miles, and also the construction of a dam at Sucker Creek and a dam opposite the property of the Port Arthur Pulp & Paper Co. at a point 11 miles up the Creek from the entrance through into the Black Sturgeon River, with all the powers authorized by the Timber Slide Companies' Act.

New Position for Mr. Alex. Dick

Alex. Dick, Peterboro, Ont.

Alexander Dick, who for the past four years has been with the R. Laidlaw Lumber Co., Toronto, has been appointed manager of the estate of Alfred McDonald, lumber dealers and sawmill owners, Peterboro, Ont., and has entered upon his new duties. Mr. Dick is well known to the lumber industry, with which he has been identified all his life. Born in Scotland he came to Canada in 1905 and soon engaged in his regular vocation. He was associated with several leading firms and for four years was superintendent for John Lumsden, of Lumsden's Mills, Kippewa, Pontiac Co., Que. In 1915 he entered the service of the Laidlaw Lumber Co. and has covered the ground in western Ontario north of the main line.

A genial, earnest and likable representative he made many friends who will wish him every success in his new and responsible post. He has always taken a deep interest in the welfare and progress of retail dealers and in the contest, which was inaugurated among the lumber salesmen of the province a year and a half ago as to who could secure the greatest number of members within a given time for the Ontario Retail Lumber Dealers' Association, Mr. Dick was one of the winners, having corralled thirteen new members. Owing to his splendid efforts subsidiary branches of the parent organization have also been organized. In Peterboro Mr. Dick will, no doubt, continue the good work he has carried out in the west on behalf of unity and co-operation.

Alex. J. Purse, who for several years has been with the R. Laidlaw Lumber Co., and returned some time ago from overseas, since when he has been attached to the west end yard, 2268 Dundas St., has succeeded Mr. Dick on the selling force and is looking after the same territory.

Decreasing Timber Wealth Creates Alarm

Dr C. D. Howe of Toronto, and Ellwood Wilson of Grand Mere, P. Q., were the guests of the Eastern Forestry Association and the Great Northern Paper Co., at Mt. Kineo, on Moosehead Lake in Maine, and afterwards on an inspection trip over the timberlands of the latter.

The Foresters of the New England and Middle States, of the University Forest Schools, of large Companies, Railroads and a representative of the U. S. Forest Service were present. Means for improving the condition of the forests were thoroughly discussed, and also the scheme put forward by Col. Graves of the U. S. Forest Service, to encourage, and if necessary, to compel the practice of proper forestry methods on private lands, as is done in Sweden, Norway, France and Germany. The situation in the United States is becoming so serious that some action looking to the proper utilization of the forests so as to insure a permanent supply, is imperative. White pine has almost disappeared, chestnut has been attacked by a blight which threatens to destroy it, spruce and balsam in the paper making States of the East, it is said, will be exhausted in another fifteen years; the great Southern pine region will be cut over in another six to ten years, and then most of the timber must come from the West.

In view of this situation, steps must be taken to reduce the cut and begin reforestation. Lumbermen in the States have bought up, in the past, large tracts of virgin timber, often for speculative purposes. In order to carry their investments, they have put in sawmills and cut off the timber as fast as possible, striving to make money, not by quality but by quantity production.

Many Men Required for Logging in Ontario

Dr. W. A. Riddell, superintendent of the labor branch of the Public Works Department for the Province of Ontario, states that there will be ample work this fall for thousands of men in the lumber camps of Ontario as all the lumber and pulpwood companies intend carrying on logging operations more extensively than ever. There is a big demand for lumber of all kinds and a decided shortage in stocks at many centres. The result is that manufacturers intend to get out larger timber cuts during the coming season than at any period since the beginning of the war. Mr. Riddell says that the greatest difficulty facing the department at the present time is to secure sufficient men to go to the lumber camps. A few days ago he

stated that 10,000 men could find employment in the bush if they could be rounded up. The wages run from \$50 to \$70 a month and board. Last year the department over which Dr. Riddell presides, placed some 1500 in the camps and the additional call this year is owing to the large amount of lumber purchased by the British government in Canada, as well as the overseas demand and the revival of building operations and carrying out of extensive repairs and alterations. Men who were in the forestry battalions in Great Britain and France are most desirable and available for the work, but any healthy, able bodied man, who can swing an axe or operate a saw is assured of steady employment in the bush during the coming fall and winter at a remunerative wage and under better housing and sanitary conditions than in any previous logging season.

Fraser Companies Will Build Another Mill

The Fraser Companies Limited are to erect another mill in New Brunswick and operations for same have already been commenced. The site of the old mill of the Scott Lumber Company at Upper Magaguadavic siding on the C. P. R., in western York County will be the location of the new mill. James M. Scott, of Fredericton, N. B., superintendent of logging operations for the company in that district, is in charge of the latest development project. The Fraser interests control about ten thousand acres of timber lands in the Magaguadavic district, including what were formerly the Scott Lumber Company's lands, as well as other limits which they have acquired from time to time. The new mill will be of a permanent character and will have a capacity of between five and six million superficial feet per season. Already crews are in the woods in the district which will supply the mill with logs and are getting out lumber as well as peeling bark. There will be a capacity cut of logs available for the mill by next spring and this fall will see the construction of the plant completed.

Eastern Happenings in Lumber Arena

Clarke Bros., of Bear River, N. S., who purchased material in the Mispic Pulp & Paper buildings at Mispic, N. B., are removing same to Nova Scotia where they intend erecting a new pulp mill.

Joseph Edward Lingley, an old and respected resident of St. John, N. B., who for more than forty years was associated with the firm of Holly & McLellan, lumber surveyors and tug boat owners, died at his home recently aged ninety years.

Upwards of \$220,000 has been received by the Department of Lands and Mines according to a statement made recently by Lieut.-Col. T. G. Loggie, the Deputy Minister of Lands and Mines, Fredericton, N. B. Three quarters of the amount mentioned is in payment of stumpage rates and the balance is for charges for renewals of leases at \$8 per mile, as well as the forest fire protection tax of half a cent an acre. The payments are said to be less than during a corresponding period of 1918.

A recent report from Perth, N. B., states that the water in the river there has risen about three feet and the St. John River Log Driving Company's drive, which was abandoned there a few weeks ago will be resumed.

Hon. N. M. Jones, general manager of the Nashwaak Pulp & Paper Company, St. John, N. B., recently stated that the Amberson Hydraulic Construction Company, Ltd., of Montreal, will erect a new concrete dam, which the company propose building on the Nashwaak river at Marysville and which will be followed by the construction of a pulp mill.

The late James S. Fairley, lumberman, of Bloomfield Ridge, N. B., who died recently, left an estate said to be worth from \$15,000 to \$20,000. The will is being contested.

Building Activity in New Toronto

Many foundations are completed and bricklaying started recently on several houses being built in New Toronto by the New Toronto Housing Commission. More than half the material for the fifty houses contracted for is now on the grounds and the Commission confidently expects to have all the outside work finished by the fall at the very latest. The original grant of \$200,000 has been exhausted, and the Commission will likely make application for \$250,000 more.

With nearly 200 applications to date the New Toronto Housing Commission will likely make application for 250,000 more. in any town in Ontario. The Commission follows the same plan as the Toronto Housing Commission, and advances money for the site as well as the building. Thirty-six houses are being erected on one block while others are being built on single lots.

The houses are all being built of brick and tile, and the present plans are for five and six-roomed detached and semi-detached houses costing \$3,000 to \$3,600.

Getting After More Business in Retail Yard

Practical Plans That Have Been Followed by Representative Dealers With Gratifying Results—Things That Suggest Big Possibilities and Develop Trade

The average retail lumberman likes to retain not only the business that he has built up since starting out for himself, but to add materially to its volume from year to year. The live wire, aggressive yardman is neither content to mark time nor to eke out a bare existence. He desires to keep up with the procession and to feel that he is a real force and a vital factor in the community.

Unless his business shows a gratifying gain each year, he naturally comes to the conclusion that if he is not going forward he is practically falling behind. In this age of rapid transit and growing national development and expansion there is no such a thing as standing still. If the turnover of the average retail lumber merchant is correspondingly larger each year, he knows that things are moving in the right direction. If he did not cherish the ambition to become bigger and stronger in his activities and demonstrate that he is an increasingly useful, influential factor in the upbuild of the business community, he would scarcely be human. We all like to be well thought of and well spoken of; to have a clean record, an honorable name, firm friends and staunch customers.

Keeping Pace with the Times

In a rapidly growing centre the volume of the lumberman's trade will naturally increase with the branching out of the community, but what about doing business in a town which shows practically no growth from year to year, so far as increase in population or the number of industries is concerned? The yardman does not want to stand still and have his business show just about the same turnover as in the years before the war, for such a state of affairs virtually means that with values doubled he is only doing half what he did previous to 1914. All lumber prices have jumped practically 100 per cent. during the past five years and unless the turnover has been commensurate with the augmented investment, the balance of trade is on the wrong side of the books. New customers must be secured, older ones must see the need of expending money in repairs, alterations and additions, and the young men (and older ones, too), should have impressed upon them the desirability, economy and advantage of owning their own homes and not paying tribute to the landlord from month to month during the greater portion of their natural lives.

One leading authority states that concerning the development of new business by the retail dealer much has been written and presented periodically, but that when all is said and done, next to capital the right kind of personality, properly applied, is the greatest of all business assets and it is asked how shall it be applied? There are other considerations to be taken into account besides personality, and one of the most outstanding of these is service, prompt, efficient and satisfactory. The yardman may have a winning personality, a representative and complete stock and may dispose of his product at reasonable prices, but unless back of it all there is service and honest value and a sincere desire to maintain and strengthen the mutual relations between seller and buyer, retailer and customer, he will never get very far ahead in the race.

In regard to the plans to develop new business, many have been tried and found successful. One eastern dealer is a strong believer in the strength of the personal appeal. Periodically he sends a representative to call upon old and prospective customers in his trade territory. This representative calls upon some town people but spends most of his time among the farmers. He carries with him advertising literature and full information concerning the service offered by the firm but he DOES NOT COME WITH THE IDEA OF SELLING ANYTHING. His business is to get acquainted with the farmer, talk over his problems with him and be of any assistance possible.

Make Pencil Sketch Right There

If the farmer is thinking of making an improvement, he may make a pencil sketch of it right then and there. This service carries with it no feeling of obligation on the part of the prospect to purchase material from the firm. This fact is made clear at the start. There is no dotted line for signature at the close of the visit. Any suggestions given the farmers' wife in making changes in the home, such as adding a sleeping porch, laying down a hardwood floor over old pine boards, removing partitions between the time honored parlor and the sitting room and throwing them into one big light, airy living room, is most cheerfully given. The whole object is to be of service.

In the course of his conversation the caller picks up some valu-

able information relative to the needs of his prospect. If he has been putting up any buildings this is noted, as well as the name of the dealer furnishing the material. His future needs and the probable date of future improvements are also jotted down. This data is all entered on prospect cards on returning to the office, together with credit information and any additional facts secured from the books of the County Assessor and the County Auditor.

Special Mail Order or Inquiry

When taking his leave of the farmer, the caller gives him some advertising literature and an envelope which opens out flat on the reverse side into an order sheet similar to the illustration following:

Special Mail Order or Inquiry

IF YOU HAVEN'T IT IN STOCK,
YOU CAN GET IT FROM

Your Lumber Co.

Your Town, Busyville.

PLEASE SHIP OR QUOTE ME AT ONCE

BE SURE TO SIGN

Above may be used for inquiry by crossing out the word ship

SIGNED

On the two ends which fold under is a list of several lines of builders' supplies and masons' supplies carried by the firm. The address of the firm is printed on the envelope so that all the sender has to do is to fill in his order or inquiry, sign it, fold, and seal with the gummed flap.

This form of advertising has paid big returns to this dealer who has used it for the past five or six years. The personal contact and service gets the attention of the prospect. It also gives the dealer definite information concerning the prospect. The envelope order blank left with the prospect provides a handy method for sending in orders and inquiries. What this means was illustrated by an order which this particular dealer received a few weeks ago for 32 M shingles. The order came in on an envelope order blank left with the farmer on August 31, 1914, almost five years ago. This is evidence which speaks for itself.

Another means of getting the inquiries is that used by a live Western concern. This firm has arranged a booklet of six post cards, each a blank request for quotations, the items to be filled in by the inquirer. With each card is a carbon and a duplicate slip which enables the inquirer to keep a definite record of the items upon which he has asked quotations. A list of items on which they can give immediate service is printed on the outside cover of the booklet. The last card is printed with red ink so that it acts as a signal that the inquirer is ready for another booklet. The principle is the same as that of the envelope order blank and can be adopted by any dealer with such modifications as he desires.

General Activity in Lumber Line

The last issue of the Labour Gazette of Ottawa reviews general conditions in the lumbering industry in Canada as follows:—

Westville reported that the lumber mills continued to be active. Charlottetown reported that lumbermen were very well employed. St. John reported that river driving and rafting had been completed, but that the saw and shingle mills were running steadily. Fredericton reported that the lumber mills and booming operations were giving employment to large numbers of men. Quebec reported that the sawmills and the rossing mills were well on with their season's cut, which would give considerable employment during the whole season. River driving was practically completed. Sherbrooke reported that the saw and shingle mills were busy. Ottawa and Hull reported that the sawmills were busy. The sawmills at Peterborough were very active. Owen Sound reported that the tie mill was not running and that the shingle mill was quiet, but that the sawmill was busy. Fernie reported that part time only was worked in some of the mills.

Just Thirty Years Ago

Interesting items from the files of the July edition of the "Canada Lumberman" away back in 1889

Rathbun's big mill at Deseronto is cutting on an average 2,500 logs a day.

* * *

Mr. J. R. Booth is having his depots and shanties on the Nipissing limits connected by telephone.

* * *

It is said the lumber cut on Lake Winnipeg this season will be 3,000,000 feet less than last year.

* * *

Wm. Milne's sawmill at Ethel, Ont., was burned August 18th. Loss about \$5,000; insurance \$1,500.

* * *

Messrs. Strickland & Co., Lakefield, have been fined \$20 and costs for allowing sawdust to fall into the river.

* * *

McLachlin Bros., Arnprior, will build another large steam mill this winter. The ground is now being cleared for the purpose.

* * *

A Victoria, B.C., man, is said to have discovered a process by which lumber can be rendered fireproof at a cost of \$1 per thousand.

* * *

Christie's mill at Brandon has been closed down, the logs brought down the Assiniboine last fall having been all used up. There is no prospect of getting more logs down at present.

* * *

The present scale of wages in the logging camps at Puget Sound are as follows: teamster, \$75 a month; chopper, \$65 to \$70; hook tender, \$45 to \$50; barker, \$40; swamper, \$40; sawyer, \$55.

* * *

The mill of the Parry Sound Lumber Co., Parry Sound, is run by water power furnished by the Sequin river. The company have some 400 square miles of timber limits around Parry Sound.

* * *

The Victoria Lumber Manufacturing Company, Victoria, will shortly proceed with the extension of their mill at Chemainus, Vancouver Island, enlarging it to a capacity of 250,000 feet per day.

* * *

The shingle mill lately built on Gambier Island, by W. L. Johnston & Co., of Westminster, is completed. The mill is turning out 30,000 shingles per day and this number will be largely increased.

* * *

The sawdust question has broken out again, and this time in the goodly town of Peterborough. Four of the sawmill men were fined \$20 and costs for permitting sawdust to flow into the Otonabee River.

* * *

Gravenhurst, the centre of the lumber district of Northern Ontario, can boast of having 14 sawmills, all of which are busily engaged in manufacturing lumber. The principal mills are Mickle's, Cockburn's and McNeil's.

* * *

Mr. Alex. McCormack recently sold to Robt. Booth, of Pembroke, for \$70,000, a valuable timber limit, 27 square miles on the Nipissing branch of the Petewawa river. The limit is partly in Devine and partly in Butt township.

* * *

During the shanty season, which is now about closed, upwards of 800 bushmen registered in Lower Town hotels, Ottawa. Many of these complain bitterly of the way they were treated both by the lumber firms and hotel men.

* * *

Ludlam & Ainslie's heading factory at Comber, Ont., was burned on August 3rd, together with two M.C.R. cars loaded with elm bolts

for Detroit, which were standing on the siding near the mill. Loss on the mill \$3,000. Cause of the fire unknown.

* * *

The last drive of the season is about out of the Petewawa river. It belonged to McLachlan Bros., of Arnprior, Hurdman & Co., of Ottawa, and Mr. Fraser. There is only one raft of timber left up the Petewawa, and it will be impossible to get it out this year.

* * *

Eighteen cribs of square timber and hemlock saw logs are on their way to Kingston for the dry dock. This is the first consignment of some forty-two cribs from Ottawa for the same purpose. The cribs will contain 700,000 feet of surface measure. The contractor receives 1½ cents per square foot for its delivery in Kingston.

* * *

The C. Beck Manufacturing Co., Ltd., Penetanguishene, with a paid up capital of \$250,000, have three extensive mills, known as the "Penetanguishene Mills," the new Keene mill and the shingle and planing mill. They cut a daily average of 150,000 feet of lumber. They claim to have the fastest running circular saw in the world. They own a steam barge with a carrying capacity of 280,000 feet of lumber and a large steam tug.

* * *

The Roberval Lumber Company, of Roberval, consisting principally of Mr. Ross, of Quebec, Mr. Beemer and Mr. B. A. Scott, have just erected a magnificent steam sawmill, fitted with the most modern improvements, including a circular saw, revolving 10,000 ft. a minute, and gang saws making 22 strokes in the same brief period of time. Three logs are thus squared and cut every two minutes, and it is the intention of the company to saw 150,000 logs per season, 20 per cent. of which are said to be pine, and the balance spruce.

* * *

The wonderful resources of British Columbia are attracting the attention of capitalists, not only of Canada but also of America, and it is surprising to see how rapidly the country is advancing even in this rapidly advancing age. That it has a great future before it we have not the least doubt. Its splendid climate, its beautiful waters and harbors, together with its vast fisheries, immense forests and rich mineral lands, with the vim and push manifested by its people, all combined bid fair to make it the Fairy Land—the Eldorado of the West.

* * *

The French River Boom Company has given notice of its intention to apply for letters of incorporation from the Ontario government to enable it to carry out work and improvements to facilitate the transmission of timber on the French river. The company is also asking for power to erect mills for the purpose of carrying on a general lumber business. Toronto is to be the chief place of business. The capital stock of the company is to be \$100,000, in shares of \$100 each. The names of the applicants are as follows: H. H. Cook, H. J. Bohme, F. E. Macdonald, all of Toronto; C. Henderson, of Bracebridge, and N. Irvine, at French River.

* * *

A very influential and significant gathering of the lumber kings of the North Shore was held at Newcastle on the 25th of July, to consider and resolve on the question of stumpage on crown lands. It was resolved to insist upon the local government complying with the following demands: (1) Renewal of the present ten-year leases; (2) Reduction of the stumpage from \$1.25 to \$1 per thousand; (3) Reduction of mileage from \$8 and \$4 to \$2; (4) Adoption of Quebec scale; (5) Making expenditure on streams to facilitate driving and constructing portage roads.

* * *

A number of mill owners of Cape Breton have entered an action against the Dominion Government to recover damages sustained. It is alleged that in the erection of the bridges for the Cape Breton railroad, the government has caused the water to be dammed and diverted, so that it is impossible to float logs with the same facility as be-

fore. The railway act, under which the claims are made, promises that in operations upon rivers, the latter shall be left in their former state, or equally as good. This has not been done in the case cited, and heavy damages are now demanded.

* * *

The sale of Mr. E. B. Eddy's timber limits took place at the Russell House, Ottawa, on August 14th. The sale was the result of a determination of the Eddy Manufacturing Company to retire from the wholesale manufacture and sale of lumber and timber in order to devote more attention to the other branches of the manufacturing business at Hull. The property offered for sale comprised about 1,377 square miles of timber limits, with depots, farms, buildings, supplies, plant, etc. Some of the properties offered were exceedingly valuable, notably the large water power sawmill, splitting mill and filing room at Hull, the cutting capacity of which is estimated at from 35,000,000 to 40,000,000 feet per season. The other properties included lumber yards and piling grounds, and are supplied with tramways, engines and cars, slides and docks, also the steam mill at Nepean, surrounded by 32 acres.

* * *

The labor commission which was appointed by the Dominion Government to inquire into the relations of capital and labor, might have been more explicit in its classification of wages paid to the employees of the lumber industry, inasmuch as the investigations of the commission have cost the country, with their publication of their report upwards of \$50,000. The lumber trade is the second leading industry of the country, and we had hoped that the commission would have been able to furnish the country with valuable information in such a manner as it would at least be intelligible. On the question of lumbermen's wages it is too ambiguous, many of the statements are very indefinite, leaving the reader to do considerable guessing. At

Ottawa, gangmen with eight months' work in the year are put down at from \$8 to \$10.50 a week; mill men, at from \$1.25 to \$1.50 a day a day; pilers, \$1.25 to \$2 a day; shanty men at \$16 a month and board; slabbers, \$1.50 a day and teamsters \$7 a week.

* * *

The St. Catharines Milling and Lumber Company have sued the Dominion Government for \$215,000 damages for the loss of logs, plant, etc. It appears that some six years ago, a number of gentlemen secured a license from the Dominion Government to cut timber and transact business of lumbering generally on Lake Wabigoon. After obtaining the license they formed a company, secured incorporation by letters patent, and started business. Some two million feet had been cut, when in 1884 the Ontario Government secured a decision of the Privy Council of England, the highest tribunal in the Empire, on the question of the ownership of the portion of the country in which the St. Catharines Milling Company were operating. On the strength of this decision, the Ontario Government served writs of injunction on each of the members of the St. Catharines Company restraining them from further operations, at the same time seizing their season's cut of logs and plant, which were subsequently sold. The Federal Government, using the name of the company, resisted the provincial authorities in the courts, claiming that although Ontario had a right to the land, to the Federal Government belonged the minerals and the timber. Judgment being given adversely in the Dominion, an appeal was again made to the Privy Council, which upheld the decision of the Supreme Court and gave judgment in favor of Ontario. The company subsequently waited on Sir John Thompson, Minister of Justice, and asked to have the matter referred to arbitration; but the government decided to refer the matter to the Exchequer Court for settlement. Sir John Thompson denies that the company are entitled to anything. The outcome will be awaited with much interest.

Adequate Ocean Tonnage is Vital Problem

The Situation as Reviewed by Leading Manufacturer—Canada's Exporting Industries Should Receive Every Encouragement to Expand

Canadian pulp and paper manufacturers, like lumber exporters shipping on private account, are finding it difficult to secure space for the U. K. Mr. A. L. Dawe, of Montreal, secretary of the Canadian Pulp and Paper Association, is now in England with a view of securing additional space, and on this side the manufacturers have approached the Hon. C. C. Ballantyne, Minister of Marine, to see what can be done in the way of obtaining space. Mr. Ballantyne, while promising to do everything to improve the situation, declared that the Government could not afford any immediate relief. This Government could not influence the British Government to relax the restrictions which it has placed upon all tonnage under British charter, although he intimated that strong representations to this effect had already been made. He saw no bettering of the position regarding outgoing vessel room until Canada had her own merchant marine.

The situation is fully explained by the following statement by Mr. J. A. Bothwell, president of the Canadian Pulp and Paper Association.

"Criticism of the Canadian Government because there is insufficient shipping to get Canadian pulp and paper products to the European market is hardly justified by the facts of the situation," said Mr. J. A. Bothwell, when asked what grounds there were for holding the Government responsible for the difficulties which the industry is having in getting its goods into the overseas market. "The pulp and paper industry is certainly greatly hampered by the lack of ships and by the abnormal freight charges for such space as is available, but in that respect it is no better and no worse off than other Canadian industries.

"The Government," continued Mr. Bothwell, "has, through the Hon. Mr. Ballantyne, given a very sympathetic hearing to our case, and has promised to do everything possible to relieve our situation, and I believe it will carry out its promise. The difficulty arises from the fact that Great Britain controls practically all Canadian shipping, except such as is owned by the Canadian Government, which is almost a negligible amount at present. Canadian vessel owners placed their ships under the British Registry during the war in order to enjoy the protection of the British Government, and to meet other war conditions. So far all efforts to have some or all of the ships restored to the Canadian registry have failed.

"The British Government wants the ships for its own uses, and the Canadian Government, as Mr. Ballantyne frankly told our dele-

gation, is powerless in the matter. The salvation of Canada's commerce, as the Minister also said, lies in building up a Canadian merchant marine, and that will take a considerable time to accomplish. The Government expects to have 20 ships in commission this year, and fifty within two or three years' time, but shippers fear that by that time their present market opportunity will have vanished. Other countries than Canada will have seized upon the trade that this country might have secured had we the facilities at present for securing it.

"The trouble with we Canadians is that we didn't look far enough ahead, and begin building ships early enough and in large enough numbers. That was probably due to the fact that we had our hands full in carrying on the war, and besides have neither the men nor the means, even if we had had the vision, to enter upon an extensive shipbuilding programme at a time when all concerned were concentrated upon the war effort. But if we didn't have these things other countries, much more sorely pressed than ours did, and to-day they are the ones that stand to benefit chiefly by construction.

"But if the pulp and paper men understand the difficulties of the Government, and are not inclined to visit upon them the responsibility for their present troubles, we, nevertheless, realize that the situation is one of very great hardship for our industry, as well as a drawback to Canadian trade expansion. In our own industry we are flooded with inquiries from Europe for quotations on pulp and paper products of almost every grade. The Minister of Marine and Fisheries, when inquiring into the situation, asked us for specific information as to what amounts of pulp and paper we had ready for export, where the shipments were located, their destination, and the amount the shippers would be willing to pay for ocean freights, having in mind all the circumstances at present surrounding ocean freight traffic. We were able to give him some information of this character, such as the fact that one Quebec producer of ground wood pulp has over 12,000 tons of pulp lying upon the docks waiting for ships to carry it to England, where it has a market, and has tried in vain for months to secure the necessary accommodation, but the real situation is that the producers are afraid to make contracts with the British buyers, because of the uncertainty as to being able to make delivery. Some, however, are taking orders and are running the chance of being able to get the necessary cargo space.

"The high freight rates are also an adverse factor in the situation," said Mr. Bothwell. "There is a differential of between \$8.00 and \$10.00 a ton against Canadian pulp and paper laid down in the

U. K., as compared with the same class of products exported thence from the Scandinavian countries, our chief competitors for the trade. We understand, too, that American pulp and paper are going overseas with a similar advantage in rates as compared with our own. But this again is a situation difficult to remedy, since we are told that for every ton of cargo space available at any Canadian port, from 2 to 6 times the amount of merchandise is offered. The Government tells us that when its ships are ready for business, profits on their operation will be made secondary to the question of Canadian trade expansion. This sounds like good policy, but its benefits are too far distant in the future to have any appreciable effect upon our present situation.

"Another thing that militates against Canadian foreign trade expansion is the fact that there are so few things that Canada wants to import from abroad, comparatively speaking. We are practically producing all of our food stuffs and the greater part of our requirements in manufactured goods. But ships that leave our ports laden with Canadian goods cannot be expected to come here empty. There has got to be reciprocity in trade. A striking instance of this relates to the supply of print paper and pulp now going to Australia. There is no reason why Canada should not supply these commodities, except again the lack of ships; but as a matter of fact, since the war stopped, Scandinavia has been supplying Australia's needs of these things, taking Australian wheat in exchange. Australia has three years' crop of wheat stored up ready for the market, which she must get rid of. Canada, of course, isn't a wheat buying country, and we cannot trade our pulp and paper for wheat."

Asked as to the general outlook for this year's pulp and paper export business, Mr. Bothwell said:

"Our American market continues firm with a very strong demand. The market for kraft and other grades of wrapping paper, which slowed up considerably when the war stopped, probably in the mistaken expectation of a slump in prices, has firmed up to such an extent of late that the kraft mills some time since withdrew all quotations, and find some difficulty in filling orders. The market for newsprint is also strong, and some producers fear a runaway market may develop this fall, which they would very much deplore, as a stabilized market is the best for all concerned. The American demand for pulp is better than normal. A statement, however, printed a day or two ago that this year's exports of Canadian pulp would amount to \$100,000,000 in value is somewhat exaggerated. Last year Canada exported pulps of all grades to the value of \$34,706,771. We may show an increase over that this year, but we have to count upon competition with the European producers, which was non-existent last year. At any rate, prices show no indication of falling, nor will they so long as the present high price of labor, freight and raw materials keep up.

"Another misstatement going around that needs correction is that the British paper mills are practically out of business, and that it will take them two or three years to get back to normal production.

Our special representative in London cables that the British mills have gone to the three-four system, which means that they are operating 24 hours a day with three shifts of workmen. At that rate it will take them but a very short time to overtake any undersupply that may exist, and any foreign made paper that gets into England will have to show good cause for doing so. The Imperial preference, you may be sure, will not be allowed to operate to the detriment of British manufacturers and British workmen, and there is no reason why it should. Great Britain is under even more of a necessity than we are to keep her industries alive, and to keep as much of her money as possible from leaving the country.

"These, however, are all reasons why Canadian exporting industries, such as pulp and paper manufacturing, should receive every possible encouragement at home, and why special efforts should be put forth to enable them to maintain and increase their foothold in the overseas market," concluded Mr. Bothwell.

New Project of Bathurst Lumber Co.

Dr. C. D. Howe, Dean of the Toronto Forest School, recently visited New Brunswick where he visited some of the parties engaged on the New Brunswick Forest Survey. The Conservation Commission, through Dr. Howe, is co-operating with the New Brunswick Forestry Department, and a special party, employed by the New Brunswick Government, is devoting the entire season to the study of annual growth and regeneration, under Dr. Howe's immediate supervision. Also, the limits of the Bathurst Lumber Company and the Pejeboscot Lumber Company were visited, and it is possible that through the co-operation of the Bathurst Lumber Company, the Conservation Commission and the New Brunswick Government, a 600 acre experimental plot may be established. The Bathurst Lumber Company are especially interested in experimental work of this kind with a view to perpetuating their timber lands.

Will Reforest the British Isles

A recent despatch from London, Eng., says: When the last of three-decker men-of-war ran off the slips British forestry died. The oak forests planted after Trafalgar for the express purpose of building Britain's wooden ways, stood untouched at the beginning of the war. When the overseas supplies of timber were cut off, the country had cause to bless the men who unconsciously planted for an emergency greater than any which they could have contemplated.

Serious effort, now being made toward afforesting Great Britain is the result of the hard lesson learned during the war, and is but one of many hopeful signs of the intelligent reconstruction visible here. Britain can never be self-supporting in the matter of timber, and, whatever success may attend the present endeavor, it is not likely she will import a single log the less for a generation.

But, thanks largely to the splendid work of the Canadian Forestry Corps, her woods are a picture of desolation, and, even before that most successful attack, the area under timber was only four per cent. of the whole.

The proposal is to spend three and a half millions sterling in planting a quarter of a million acres during the next ten years, under centralized authority, possessing wide powers and capable of laying down a well-defined, far-reaching policy.

Britain has never had a real forestry department, and one of its advantages will be that education in forestry will be greatly stimulated, and a worthy career opened to experts.

The House of Lords, which has approved the scheme, knows more about such subjects than the Commons, and it is hoped no serious opposition will be encountered in the lower House.

The Prince of Wales as Soldier

Many charming little stories, demonstrating the great human and soldierly qualities, are being told about the Prince of Wales, who will open the Canadian National Exhibition in Toronto on Monday, Aug. 25th.

The Canadian boys overseas had plenty of opportunity to observe his actions and declare that he seemed to love danger, and at times his conduct bordered on the reckless.

This side of his character is well illustrated by the following extract from Ian Hay's book, *The First Hundred Thousand*.

"Bloikie lit his pipe—it was almost broad daylight now—and considered.

"Yes," he agreed. "Perhaps. Still, my son, I can't say I have ever noticed staff officers crowding into the trenches (as they have a perfect right to do) at four o'clock in the morning. And I can't say I altogether blame them. In fact, if ever I do meet one performing such a feat, I shall say: 'There goes a sahib—and a soldier,' and I shall take off my hat to him."

"Well, get ready now," said Bobby. "Look."

They were still standing at the trench junction. Two figures in the uniform of the staff were visible in Orchard Trench, working their way down from the apex, picking their steps amid the tumbled sandbags, and stooping low to avoid gaps in the ruined parapet. The sun was just rising behind the German trenches. One of the officers was burly and middle-aged; he did not appear to enjoy bending double. His companion was slight, fair-haired, and looked incredibly young. Once or twice he glanced over his shoulder, and smiled encouragingly at his senior.

The pair emerged through the archway into the main trench, and straightened their backs with obvious relief. The younger officer—he was a lieutenant—noticed Captain Blaikie, saluted him gravely, and turned to follow his companion.

Captain Blaikie did not take his hat off, as he had promised. Instead he stood suddenly to attention, and saluted in return, keeping his hand uplifted until the slim, childish figure had disappeared round the corner of a traverse.

It was the Prince of Wales.

In the Abitibi, P.Q., region there are now fifty saw mills completed and another four are in course of construction. At La Reine six mills are completed; Dupuy, 3; La Sarre, 6; Mecanic, 6; Authier, 2; Privat, 4; Launay, 1; Trecesson, 2; Dalquier, 1; Figuery, 1; La Motte, 1; Amos, 5; Landrienne, 2; Barrante, 2; Courville, 1; Senne-terre, 2; Doucet, 2. It is estimated that during next session 60,000,000 feet of lumber will be produced in this region. The Quebec Government has spent large sums in developing the district.

The Southern Pine Association, New Orleans, La., is issuing a bright and breezy monthly publication known as the "Southern Pines Salesman." It is filled with interesting and timely topics and is neatly printed.

"More Aggressive Policy in Business Life"

Waiting and Expecting That Trade Will Come Without Effort is Relic of Bygone Days—Cashing in on Big Demand for Building Material

By George C. Robson

Business, generally, is going through a period of reconstruction and it has now reached the point where business competition in all lines will be keener and an entirely different type of merchandizing must be adopted, which will include a more aggressive policy in your business life.

The idea of the retail dealers standing with our face before a mirror, smiling and kidding ourselves in the belief that we are the finest merchants in any business, and at the same time allowing the auto salesman and lightning rod agent and the likes to go out and "cop" Mr. Farmer's money, will not bring us any success in these times of readjustment and changes in business methods.

The retail lumber business is surely good for your health, but most of you, of course, are not in for this purpose alone. Your desire is not only to make a good living, but more, and you are entitled to more; however, waiting and expecting the business will come to you without effort is a relic of the by-gone days, and unless you stir yourselves, keen competition and progress are going to sell Farmer Jones his building material right under your nose; the auto agent will sell him an automobile, and someone else will entice him to buy something he does not need as much as buildings properly to house his family, grain machinery or stock. And quite possibly, while you are sitting idly in your warm office, he will use the money he owes you for some other material in purchasing these things, that, to a more or less extent, are side attractions to farming, and you, still sitting in your comfortable chair, are wondering how it happened and continue to cuss him because he does not pay his bills. The other fellow went and convinced him the article he had to sell was something Mr. Farmer needed, and sold it probably for the hard cash that really belonged to you.

Are you willing to admit that these fellows that travel around the country selling "Tin Lizzies" and lightning rods are better salesmen than you? If so, I suggest you take a few days off, let it be known that you are interested in buying an automobile, and it will not take you long to find out just how the other fellow did it.

Lumber manufacturers and retail lumbermen have, in the past, been entirely too well satisfied to sit in their warm office and figure they were handling a God-created material from which Mr. Farmer or anyone else who desired to build must create his housing for man and beast. To a greater or less extent, it has been compulsory for those who intended to build to come to you, but had this idle time been spent in working out plans to create a desire among the people to build more and better, and to promote the "own your own home" idea, it is certain many of us would have learned the lesson we are taught by the auto salesman, and the lightning rod agent.

Promote the "Own-Your-Home" Idea

Many of you are depending, to a greater or less extent, on the farmer's trade for a considerable bulk of your business, and you will agree with me Mr. Farmer is a suspicious fellow when it comes to buying, and a most peculiar fellow when he comes to sell the product from his farm. He always feels he is over-charged for everything he buys and the only real honest fellow who has anything to sell is himself. You, as a retail lumber merchant, have a large duty to perform in connection with the handling of the farmer's trade, especially at this particular time when many of the building materials appear somewhat high in price and at a time when we must all urge more building to help during the reconstruction period.

Not only must you keep on most friendly terms with him, but at the same time you must be able to convince him you are giving him a square deal. If conditions have forced you to increase the prices on your lumber, it is therefore necessary that you sell at higher values, and it is your duty to convince him that, proportionately, the product you are selling is one of the best bargains a farmer can invest in; that he, to-day, even when paying more for lumber, is getting a much larger percentage of lumber for any article he has to market; that the building material you are selling him properly to house his crops, stock or family is a dividend producer for him; and we know he watches his profits much closer than do many lumbermen.

Make yourself believe you are doing this customer as great a favor by selling him as he is doing you in buying. And isn't this a fact, only more so, for you are persuading him to buy something

that he really needs from which he expects to realize or increase his profits? When it is all said and done, the most successful sale is the one where both the buyer and the seller have made a profitable transaction.

Personality, good fellowship and enthusiasm, to-day, play a more important part in successful merchandising than ever before, and the successful retailer can well afford to arrange his affairs so he can give a considerable portion of his time to visiting the community which logically belongs to him, cultivate an interest not only in the entire community, but the individual friendship and acquaintance of those with whom he should deal. And, if I may add, he might well take some lessons in salesmanship from the old-time politician, who, to make a good fellow of himself, always jollied the farmer's wife by telling her what an excellent housekeeper she was, complimented the daughter on her good looks, cultivated the confidence and friendship of the old man himself, and lastly, but not least, did not forget to kiss the baby; however, I caution you against over-doing in attempting to practice the foregoing method by being sure you do not attempt to kiss other than baby, or allow Mr. Farmer to exchange all his victory bonds for your building material. He can much better afford to carry them than you, as you have already taken your full share, and his bank will gladly loan him money on them for building purposes.

Local Lumbermen Can Work Together Profitably

Help to keep him a 100 per cent. patriot by making him hold some of his country's bonds, the country that does more for him than any other merchant; for does it not guarantee him a fixed and extremely profitable price for his wheat, pork and other products?

Progress has been defeated many times and oftener arrested temporarily through the eternal belief in the survival of the fittest. All forward movements are the result of a keener foresight and the past may be well forgotten as a guide for the future, for it holds much that is valueless and harmful. A new power, long dormant in business, is awakening men to new undertakings and greater achievements, and the inspiration and enthusiasm of the new undertaking will accomplish the end we seek.

There are some matters of co-operation within the membership of your association on which I wish to touch, particularly as they apply to towns that have more than one yard, some of these being at points where there is plenty of room for legitimate competition, and others at points where the community is not well enough settled to make a successful business for more than one yard. I shall first mention the towns that have a sufficient population within and without their limits to support two or more retail yards, and shall first discuss those places where you will find the retailers in friendly competition. In such places you usually find success attending their efforts, and what a golden opportunity there is for them to plan together on all matters that are not only good for themselves, but for the community they serve.

How well they can work together in the exchange of stock, and just citing an example: Suppose the town did not require more than one car of siding, or possibly a car of another grade annually, and instead of each yard putting in a carload of these various items, why not arrange between themselves for each to take a portion and in this way not only be able to exchange if one is out of such items, but likewise exchange on other stock, which occasionally one or the other may be short? They are not only reducing the amount of their investment, but each such transaction brings them closer together. How much they can accomplish with contractors or architects by having these parties know there is not throat-cutting competition going on, which, as a rule, is very detrimental to the builders from the standpoint of quality.

A Concrete Example

I recall, many years ago, going to a western town and by pre-arrangement meeting four dealers in the office of the largest yard in town, and while we were sitting around one common board I succeeded in selling them 3,000,000 feet of lumber for their season's requirements all at the same price and on the same terms. Everyone of these dealers knew exactly what the other party was paying for his material, and after the transaction was closed I could not refrain

from remarking this was an unusual transaction and one of the gentlemen spoke up and said they conducted their lumber business in that community along these lines at all times, and I can tell you I positively knew every yard in that city was a success, each making money and having a confidence in the others that allowed a close co-operation on all matters that were of common interest to them. They know what it cost them to do business and realized that no one person can do all the business. Many times have I looked and thought of the many places where such conditions did not exist.

I recall another town where there were two dealers who were not even on speaking terms. One dealer in this place passed no comments about the other, while the other party not only talked freely in a detrimental way of his competitor, but did not buy from any salesman who sold the other party. I considered one of these men a perfect gentleman, and it was my pleasure to sell him considerable stock. I know he tried several times to get together with the other party, but his competitor happened to have a little more financial backing and declined at all times to have anything to do with him.

I hope there are not many places in Western Canada where these conditions exist, and if there are, I will vouch that neither party is making headway; and unless the business is going ahead, it certainly is going back. It is impossible for any business to stand stationary.

How much better it would be if the two unfriendly dealers mentioned could get together, talk over matters concerning their business and work in harmony for the good of their community and their pocketbooks! They surely would find life much sweeter and have a much better belief in humanity at large.

If any of you occupy either of the positions of the two lumbermen mentioned, I suggest and urge that you try to forget your difficulties and the fact that you are competitors in the same line and see if you cannot find a common ground on which you can co-operate. Nothing would give me more pleasure than, some day, to have two such competitors come to me and say that through this small word of advice I have mentioned they were able to get together. I can assure you each one of them would feel like handing me a good sized victory bond. Get to know each other; probably you are both good fellows; confide in him and he will trust you; tell him your troubles and you will find there are others.

Too Many Yards to Make Success

Let me touch shortly on the deplorable condition that exists where there are too many yards to enable any of them to make a business success. It would be much better for them to get together, possibly forming a partnership, thereby eliminating one of the yards, and in this way not only cut down the large overhead, but enable the interested parties at least to make more than their bread and butter out of the financial investment. Or possibly in some places it might be practicable for one of the yards to discontinue by selling out to the other, and in this way enable one not only to make a living but reap some advantages from his investment.

Let me suggest that, if such a transaction is attempted, extreme care should be used to make the proposition attractive to the competitor who discontinues. He is entitled to this consideration, and the purchaser, by enlarging on his sales, is enlarging on his profits, and any matter of false pride on such matters should be cast aside the same as it should be in a place where there is unfriendly competition.

Is not such a transaction, put through in good faith, much better for all parties concerned than to find, after doing business for a considerable length of time without profit, one or the other is forced through financial difficulties to discontinue? In such cases it is usually the survivor who has the longest pocket-book. After it is all over they can look back over a few wasted years without compensation to either and nothing to show for their efforts except "they gave the other fellow a good run for his money."

Retailers' Advertising

Judicious advertising is something many retailers, I believe, are neglecting, and while they do occasionally send out a calendar, or put up a few sign boards around the community in which they live, I do not believe this form of advertising brings them direct results.

I am impressed with the form of advertising used by a few of your members, and mention this in connection with the house organ. They believe this type of advertising brings them excellent results, and while not so much advertising what they have to sell, it dwells on matters that are of special interest to the farming community where most of their yards are located. It is information the farmers appreciate, for it gives them something of particular value which does not cost them anything—something every farmer appreciates. He journeys to the offices of Mr. Lumberman for further information, which gives the yard manager an excellent chance, not only to get acquainted, but to talk with the farmer concerning his building requirements and to interest him in some new buildings that possibly

had not been considered until a new idea was brought to his attention.

You may say it is easy for me to make suggestions but impracticable in many places to carry them out, but, I charge you, many good live retailers are doing it successfully. It can be done anywhere if gone at in the proper spirit.

How New Brunswick is Aggressive

The fire season in New Brunswick may be said to be more severe than 1918 owing to the extended period of dry hot weather. The organization of the Forest Service is proceeding favorably, but is not complete, owing to a considerable number of rangers' appointments not being confirmed after the six months' probationary period.

A summary of the fires compiled to date is submitted, but does not include, of course, all the fires that have occurred to date.

Total number of fires reported	220
General causes	76
Railway causes	144

37 of railway fires occurred on right of way and 107 were reported as tie fires.

The total estimated damage is in the vicinity of \$120,000.

	Railway	Others	Total
April fires	2	2	4
May fires	39	39	58
June fires	125	33	158

220 fires

Causes:

(a) Settlers neglecting slash fires or carelessness which resulted in \$50,000 damage	30 fires
(b) Fishermen, campers, picnic parties	23 fires
(c) Railways	144 fires
(d) Accidental	3 fires
(e) Careless use of fire, industrial	12 fires
(f) Incendiary	5 fires
(g) Unknown	3 fires

220 fires

The area of ground covered by all the fires in the province to date is approximately 10,000 acres.

The Fire Protection Staff at present consists of:—

Rangers and Inspectors	40
Temporary Fire Wardens	32
Co-operative Fire Wardens	60
Voluntary Fire Wardens	154
Road Commissioners	490

Total 776

Splendid results have been secured by the co-operation of the Public Works Department of the Provincial Government, whereby the Minister of Public Works has authorized 490 Road Commissioners to act as Fire Wardens in case of fire in their vicinity. Also great assistance has been rendered by the lumbermen of New Brunswick, who have given the services of 60 of their woods superintendents and foremen as co-operative fire wardens.

1,000 school teachers have been circularized regarding fire protection; 14,000 camp fire books have been distributed.

15,000 fire posters have been placed in the field.

One look-out has been connected with telephone and watchman employed.

Preparations are being made for three others, and considerable amount of woods telephone lines.

Donnacona Will Make Big Extensions

Though no official announcement is as yet forthcoming, it is understood on good authority that during the past few days definite plans have been consummated for financing of several millions for expansion of the activities of the Donnacona Paper Company, Limited, Donnacona, Que. Though perhaps not so familiar to the Canadian investment markets as some other large Eastern paper manufacturers, the Donnacona Company is known to the pulp and paper trade as one of the largest and most successful of Canadian manufacturers of newsprint paper, practically the whole of its thirty thousand ton output being absorbed by prominent newspaper publishers of the Eastern United States. In years past its output was sold to The New York Times.

Nothing definite is yet known regarding the exact nature of the securities to be issued, but it is believed that the new financing will take the form of a first mortgage bond issue of several millions.

Pacific Coast Forest Products at Big Fair

Major James Brechin, Toronto,
B. C. Lumber Commissioner for the East

The Province of British Columbia will make an imposing and attractive display of forest products in the Canadian government building at the annual exhibition of the Canadian National Exhibition, Toronto, which will be held from August 25th to Sept. 6th. The space occupied will be 12 x 65 ft. and the booth will be representative in every respect of the forest wealth of British Columbia. There will be not only many photographic illustrations of the timber assets of that province, but also samples of B. C. flooring, ceiling, interior and exterior trim, panelings, cooperage, pulp products, etc. Not since 1916 has there been a display made by British Columbia at the big exposition and the space which will be occupied this time will be much larger and the character of

the showing more extensive than ever.

Major James Brechin, now of Toronto, late of Victoria, who was recently appointed British Columbia Lumber Commissioner for the East, will have charge of the booth, and will be glad to welcome all those interested.

It has been estimated by the Canadian Commission of Conservation that there are over 366,000,000,000 feet of saw timber in British Columbia, which represents over one-half the total stand in Canada. The annual growth increment has been estimated at 6,000,000,000 feet.

The production of lumber in British Columbia has increased so rapidly in the last few years that some are predicting that the province will be marketing 250 million feet annually before long. The value of last year's production was \$54,162,000, as against \$48,300,000 for 1917 and \$29,150,000 for 1916. The waterborne export of lumber from the province last year was 88,069,000 feet, or more than 100 per cent. over 1917. Of this, 17,024,000 feet went to China and 19,803,000 feet to Japan. The year 1918 saw the province most prominent in connection with the war, the total shipment and production of aeroplane spruce and fir from January to November, 1918, totalling 25,124,000 and 9,224,000 feet respectively.

Forest Fire Smoke Impedes Navigation

On Lake Superior, and to a lesser extent on Lake Huron, the movements of vessels have been interfered with by the smoke from forest fires. During the day the captains are able to make way with a fairly clear view, but almost every night they are forced to anchor their vessels. Between the fog and the smoke it is impossible at times for the crews to see twenty-five yards, and to continue sailing would mean accidents. A few days ago, when morning broke on Whitefish Bay, at the head of the St. Mary's River, between 50 and 60 freighters were revealed anchored within a short distance of one another. For twenty hours one day last week not a vessel locked through the Canadian Soo because of the smoke.

Several small forest fires are burning within the city limits of Sault Ste. Marie. The city has men patrolling some of these areas, and the firemen have spent several nights in an endeavor to keep the flames from getting into the centre of the city. While no lives have been lost to date, there have been many settlers in these districts who have been ready to leave their homes on short notice should the fires get closer.

Logging Companies Will Increase Cut

There is every indication that operations will be carried on in the bush this year in Ontario, Quebec, and New Brunswick more extensively than ever. Some firms have already doubled the number of their camps and are engaging all the lumberjacks available in their representative districts, so as to get as much cutting done as possible by the end of 1919. There is no doubt that if labor conditions are propitious the timber taken out this winter will be greater than any year since the outbreak of the war. Wages show no disposition to come down and while there was a slight drop during the summer, the figure for the average lumber-jack is running from \$55 to \$65 per month, with a strong upward tendency. Cooks are receiving \$80 to \$100 per month, and foremen \$110 to \$125.

On a number of items which enter into the rationing of the men

there is an advance. Taken on the whole the expense of getting out the timber will be greater this season than last.

An indication of the extensive character of logging operations was furnished the other day when a harness manufacturer stated that his establishment was so crowded with orders for harness for lumbermen and loggers that he could not begin to make the number of sets required. Of late years business has been rather quiet, but it has now set in with a rush.

Oats are selling at \$1.06 per bushel, whereas last year lumbermen were paying only from 65c to 80c. Hay is now \$35 per ton and up, and was from \$10 to \$15 lower at this particular period in 1918; thus do logging costs keep aviating all the while, and dearer lumber is in sight again next season.

Portable Houses Will Be Costlier

It is understood that the Canadian Timber Products Association recently gave the Export Association of Montreal a price on a certain type of portable house, which might be used to advantage in Europe. This figure was to hold good until the middle of the present month, by the end of which time the price was to be void. It is understood that the Export Association is sincerely hoping that the offer will not be accepted, as the estimate, when given several weeks ago, was thought to be sufficient, but just now considering labor and lumber the quotation is away below the mark. "If we were figuring again on this house," remarked one leading member of the association, "we would want to increase the price by, at least, one-third, which will have to be done in order to protect the manufacturers so that they are assured of profit on their production."

Would Place Lumber on Free List

At the recent Liberal convention held in Ottawa, a tariff resolution was passed calling for substantial reductions of the burdens of Custom taxation with a view to accomplishing two purposes, viz., diminishing the high cost of living and reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion. In this connection it was declared that saw-mill machinery, rough and dressed lumber, etc., should be free from Custom duties, as well as the raw material entering into the same.

Housing Scheme Encounters Some Snags

The Province of Quebec Industrial Housing Scheme, in which lumbermen are interested, is meeting with difficulties. To begin with three of the original members of the Montreal Commission resigned on the ground that the plan is unworkable. Then the Commission objected to be taxed 2½ per cent. on the amount of the loan to meet the expense of a technical committee which has been appointed by the province to draw up plans and supervise the work. The general criticism of the scheme is that it cannot be carried out within the limits of expenditure—\$4,500 per house—set by the Act. While houses may be built for this sum in rural districts, it is impossible to do so in a city like Montreal, where a large part of the money must be spent. The town planner of the Commission, however, is optimistic so far as this is concerned, provided that the houses are constructed on plans which will permit many dwellings to be built in terraces and in large numbers. But there are sceptics, who declare that houses worthy of the name cannot be built for the amounts specified.

Will Cruising Be Done by Aeroplane?

A sign of the times. A Nova Scotia Aerial Survey Company is offering to make photographs and to survey timber and pulpwood areas by aeroplane in any part of the world; also to undertake forest protective work. There are optimists who believe that the time is not far distant when we shall be surveying and cruising our forest lands by aeroplanes—that the work can be done more accurately and cheaper than by present methods. Those of the old school, however, are very sceptical. The company referred to is prepared to make contracts for the distribution of political and advertising literature. This opens up a new field of publicity, and in the future we may expect to find our cities, towns and villages bombarded with immense quantities of propagandist and trade literature by the rival political parties and enterprising commercial firms.

Three petitions for leave to appeal, involving important questions whether the Companies' Acts of Manitoba, Saskatchewan and Ontario are ultra vires of the provinces, were before the Privy Council recently in London, Eng. Before counsel opened their addresses Lord Haldane intimated, on behalf of the Privy Council, that their Lordships were ready to grant leave, and expressed the desire that all three appeals be consolidated, and only one set of arguments be heard. Counsel promised to arrange this.

Personal Paragraphs of Interest

L. Rolland, of Blair & Rolland, Montreal, is on a business trip to the Eastern States.

H. J. Terry and family, of Toronto, have returned from a trip to Port Arthur, Duluth and other points.

W. T. Mason, of Mason, Gordon & Co., Montreal, spent a few days in Toronto recently with Hugh A. Rose, Ontario representative of the company.

H. J. Hall, of H. J. Hall & Sons, who conduct a general planing-mill business at Kitchener, Ont., is spending a well earned vacation in the Muskoka district.

F. Dieulefet has left Montreal for France as representative of Mr. U. E. Germain, Montreal, the representative of Timms, Phillips & Co., Ltd., Vancouver.

R. G. Chesbro, Toronto, representing the Allen-Stoltze Lumber Co., of Vancouver, has been on an extended motor tour through Michigan and other States.

Frank W. Gordon, who has charge of the B. C. forest products department of Terry & Gordon, Toronto, has returned from an extended business trip to B. C.

L. D. Barclay, manager of the Toronto office of Canadian Western Lumber Co., Fraser Mills, B. C., left recently on an extended visit to Edmonton and the Coast.

Arthur Frerrault, of the Brown Corporation, La Tuque, was drowned while attempting to rescue his two sons in the Bastonnais River, near La Tuque. All three were drowned.

Chester H. Belton, of the R. Laidlaw Lumber Company, Sarnia, Ont., accompanied by his wife and family, has returned from spending a few enjoyable holidays at St. Andrew's, N. B.

C. H. Goodhand, of Lindsay, Ont., who is foreman for the John Carew Lumber Company, has been laid up for sometime with a cut arm but is now making good progress toward recovery.

Among the lumbermen from Ontario who attended the recent big Liberal convention in Ottawa, were A. J. Young, of North Bay and Toronto, and Norman C. Hocken, of Otter Lake, Ont.

Horace Hartley, representing J. & D. A. Harquail Co., Limited, lumber manufacturers, Campbellton, N.B., spent a few weeks in Toronto and other Ontario cities recently, calling upon members of the trade.

Arthur Marshall Rowles died recently in Toronto after a long illness in his 68th year. He came to Canada from England in 1880. Prior to his illness he had completed fifteen years' service with the Canadian Shipbuilding Company, latterly as manager of the Boiler Department. Seven children survive him.

Thos. Patterson, of Hamilton, president of the Ontario Retail Lumber Dealers' Association, who is spending an enjoyable vacation in Oregon and California, is expected home from the south in the near future. Mr. Patterson has visited many points of interest and will have much to tell his friends on his return.

Albert V. S. Pulling, who is a graduate in Forestry of New York State College, has been appointed Dean of the Forestry School of the University of New Brunswick at Fredericton. He has been employed on practical work in New Hampshire for some time and was assistant professor during his course in New York.

J. L. MacFarlane, secretary of the Canadian General Lumber Company, Toronto, is spending his holidays at his summer home near Peterboro. Mr. MacFarlane's many friends will regret to learn that his health has not been of the best during the past few weeks and hope that he will speedily regain his former vigor.

Joseph Oliver, of the Oliver Lumber Co., Toronto, and former president of the Canadian National Exhibition, Toronto, was a member of a deputation which recently waited upon the federal cabinet at Ottawa with the request that the government contribute one half of the million dollars required for a live stock arena in Toronto. The delegation reports that the request met with a sympathetic hearing.

G. N. Howes, son of John Howes, retail lumberman, Harriston, Ont., has taken a position with Campbell, Welsh & Paynes, Toronto, and will cover part of eastern and western Ontario in the interests of the firm. Mr. Howes has spent all his life in the lumber business of which he has a thorough experience and returned some time ago from overseas.

Mr. and Mrs. John K. Bell, of Toronto, were recently killed by a shunting C. P. R. engine while crossing the tracks of Riverdale Park on their way across the Don River to hear the band concert in the eastern section of the park. Mr. Bell, who was a retired lumberman, formerly lived in Peterboro and was in his 79th year and Mrs. Bell was 78. Although the flagman tried to warn the aged couple and shouted to them, he could not avert the terrible accident

and both Mr. and Mrs. Bell lost their lives. The crossing is a very dangerous one and it is almost miraculous that more tragedies have not occurred at this point.

Wm. Turnbull, Victoria, B. C., lumber commissioner of British Columbia, who also has charge of the publicity work in connection with the Forestry branch of the Department of Lands for that province, spent a few days recently in Toronto, Ottawa, Montreal and other eastern centres in the interest of wood products of the Pacific Coast. While in Toronto, Mr. Turnbull, who is a former widely known newspaper man, being for several years engaged in journalism in Prince Rupert, spent some time in company with Major James Brechin, British Columbia Lumber Commissioner for the East. They called upon a large number of members of the trade.

J. L. Campbell, of Campbell, Welsh & Paynes, Toronto, has returned from a trip to Winnipeg. He reports that owing to the crop failure in many sections of the Province, the demand for lumber from the Coast will be light during the coming year, but that the B. C. manufacturers are not worrying as their stock is commanding an exceptionally high figure across the border with the demand greater than supply. So far as prices are concerned at the present time, the market is largely an auction one and the material goes to the highest bidder.

The Powell Lumber & Door Co., 133 Front St. W., Toronto, who have been in business for a number of years, having taken over the interests of the Rathbun Company in Toronto before the war, have disposed of their stock and gone out of business. The property on which their premises were located has been sold. The Oliver Lumber Co. have acquired the sidings of the Powell Company at the foot of Spadina Ave., where the latter maintained a hemlock yard. Richard Locke, manager of the company, has retired for the present and will take a well needed rest, but may re-enter the lumber business at a later date.

W. G. Clarke, of Clarke Bros., Limited, Bear River, N. S., accompanied by A. G. McIntyre, president and managing-director of the pulp division of the company, spent a few days in Toronto recently on their way west to Port Arthur, where they inspected the plant of the Port Arthur Pulp and Paper Co. Mr. Clarke and Mr. McIntyre have been spending sometime visiting pulp plants in the New England States with a desire to secure all the latest ideas and suggestions in construction and equipment. Clarke Bros., Limited, are erecting a sulphate pulp plant at Bear River, which will have a capacity of 30 tons per day and they are also enlarging their saw-mill and woodworking operations. Good progress has been made on the construction of the new pulp mill. Mr. McIntyre was until recently news print expert of the American Publishers Association.

Big Increase of Timber Revenue

Upwards of \$20,000 had been received at the Department of Lands and Mines of New Brunswick, according to a statement made recently by Lieut. Col. T. G. Loggie, the Deputy Minister of Lands and Mines.

Three-quarters of the amount mentioned is in payment of stumpage rates and the balance consists of charges for renewals of leases at \$8 per mile, as well as the forest fire protection tax of half a cent an acre. These payments are due on August 1st annually, but many of the lumbermen pay their amounts in advance.

The Evolution of the Country Lumber Yard

Dealer Has Legitimate Right to Keep for Sale Anything He Can Make Profit on, but is it Good Policy for Him to do so—Law of Limitation

The country lumber yard has always been a place where the carrying of mixed stocks was the rule. The addition of the coal business was rendered necessary because of the limitation of the use of building materials during a large part of the year. But everything else that went into building construction was considered proper for the business of the yard, says C. H. Ketrledge in the "Mississippi Valley Lumberman." Among these things, however, there were certain articles, such as paint and builders' hardware that many dealers did not handle, because they thought it didn't pay them to do it. In the earlier days though pretty near every country dealer was handling the mixed paints. But the hardware and drug stores thought it was a part of their business also to handle them and competition was such that gradually the lumbermen ceased to bother with the business.

There were other articles, too, such as implements and furniture that a few dealers thought they saw some money in handling. In fact, there were those who took up with most anything they saw a dollar in and didn't care whether they were infringing on the rights of other business men or not. As a rule, however, the stock of a lumber yard comprised building materials and coal, and where they took on anything else was chiefly in the little towns where there were more yards than were needed. Doubtless, this same condition prevails in such towns at the present time and dealers have to sell anything they can to make any money at all.

There is no question but a dealer has a legitimate right to keep for sale anything he can make a profit on, but it is questionable whether in all cases it is good policy for him to do so. Take it in the average town, I believe it the best policy for a lumber dealer to include in his stock only those things which are used for building purposes. This, of course, includes paints, builders' hardware, and fencing. Drain tiling, also, would probably come under the head of construction. These, with others of like character, together with coal, constitute what may be termed the legitimate stock of a lumber yard.

Leaving out paints, hardware and fencing, it may be said that competition is confined to the two or more yards in the place. But when the yards go to dabbling into something which other business concerns think belong solely to them, the lumber yard, or yards, as the case may be, have a competitor in every one of those people, and naturally they are not going out of their way to throw business to a competitor. The druggist or the hardware dealer is not likely to influence a man to buy his lumber at a yard that competes with them for the sale of paints and hardware, and moreover, they are not overly friendly with the lumberman either. The result of this feeling is that prices are cut to get the business, and consequently no money is made out of it. Some yards even handle salt and flour, which can't help but antagonize the grocer. If he handles wagons or automobiles, the implement dealer and the garage man have got it in for the lumberman and would just as soon see a bill shipped in on him as not.

Creates an Unpleasant Atmosphere

So instead of having the business men friendly to the lumber yard and using their influence to persuade people to patronize the home lumber yard, their attitude is right the other way, and they and their friends are hostile to the dealer and his business. They may be in a personal way friendly and all that, but nevertheless, there is a feeling of business hostility existing which is always working to the detriment of the dealers' business interests. In a large place this does not matter so much but in a small town where everybody is more closely related, it matters a good deal to the lumberman, for much of his success depends on his having the good will of every unit of the community. This is something, of course, which does not concern the farmers, for the more competition there is in the town the better it suits them. But all the same they have their friends among the business men who can help or injure the lumber dealer as he chooses to.

You can form some idea of this feeling by how you feel yourself when one of the elevators puts in a stock of coal or perhaps lumber. You haven't the same feeling as you had before toward that concern. You think it is an unnecessary infringement on your business, and places you at a disadvantage as you are practically debarred from retaliating by handling grain. But you are not prevented from hinting to your farmer friends that grain prices are not

what they ought to be. Anything like this plays the devil with an elevator. But it is human nature to retaliate. There's lots of it in these small country towns, and it is a game two can play at. So if the elevator man hears of the dealer's attitude, he is likely to come back by intimating that lumber yard prices are too high, and forthwith makes a cut on his coal and lumber, which he can easily make up for on his grain prices.

When lumber yards and elevators keep within the limits of their regular business they can be a great help to each other in forming public opinion. But, if otherwise, they can make it mighty unpleasant for each other.

It is not to be reasonably expected that a state of harmony can always exist between the lumber and some of the other business men. For many years the hardware men have been handling things that more properly belong to the lumber business, such as building paper, roofing, screen doors, and in many instances, windows and storm sash and doors. The lumbermen have lost the sale of pine fencing and most of the wire substitute is sold at the hardware stores together with the steel posts also. In one way or another, substitutes for what the dealer handles are being carried for sale in other stores in the town, so that it has come about that every country dealer has several local competitors besides those of the lumber yards, and I think it is more of a general thing than it used to be. Every town of considerable size now has its department store where practically everything is handled that is carried by the smaller single stores. As a rule, they have proven to be an economy in merchandising.

Becoming a Department Store

There is no question but that there is a tendency also toward making a department store of the lumber yard, and including every thing that goes into the composition of buildings, and in some places

Cutting the stalwart white pine in Northern Ontario

doubtless it will include some of the other heavier commodities of merchandise as the conditions will justify. If dealers generally accept the idea of selling the building instead of selling the items for it, contracting to furnish the job complete, it will become a department of the business. We don't generally think of a lumber yard as a department store, but in a way it really is, and should be considered so. The average yard is a conglomeration of building merchandise and all the sales are thrown together in one lump sum of each day's transactions and at the end of the year the whole is figured up and the profits of the yard supposed to be arrived at. Such yards have no way of telling whether they are making any money on coal, cement, plaster and lime, or any other item of stock, other than lumber which they may handle. They may be losing money on any one of these articles and don't know it. As a consequence this loss has to be made up by the rest of the stock. It is a well known fact that cement, as it has been handled in the past few years, is an expense instead of a profit with the average dealer, and doubtless other items are being sold in the same way.

I think I am warranted in saying that the majority of lumber dealers don't know for sure what it costs them to sell a ton of coal. They fix a certain price and guess that it is making them a profit, but

their investment and not one mentioned the labor of his wife and family. Not until recent years has there been an effort to bring system into the business of farming and it will be many years yet before the majority of farmers will know what their respective crops cost them to produce, and which is profitable or unprofitable. As a matter of fact, and generally speaking, farming of itself has not been a profitable business and the farmer has made what money he has chiefly from the rise in the value of his land. As a business investment farming has been a poor business. Very few landlords in the older states where land values are high have realized more than four per cent. on the investment.

The average lumber dealer is not getting all out of his business that he might because he is handling some lines that are unprofitable, and in this he is very much like the farmer. And like him, too, he has no system to show him where the trouble lies and his method of business in this respect puts him in a class with the farmer.

In the matter of buying and selling, a good many business men can learn something from the farmers, as most of you know.

The ready-cut house concerns in their advertising put great stress on their alleged saving in cutting up the material for a house, and like everything else in their claims, this is a false assumption. But I know it carries great weight with those who are ignorant of the details of construction, and this will include practically everybody but the building mechanics. Speaking myself from experimental knowledge of the details of construction, I can say that the only way these concerns can save in the material is by skimping the job, which is the identical way that some contractors follow when they take a job to furnish at a figure which would be a loss to them if they put up the building as it should be and as intended by those in competition for the job. Such a saving, however, is not in the interest of the owner who is paying for what he thinks he is getting but don't get.

Aircraft in Forest Protective Work

The following comment on the use of airplanes in forestry service is contained in the annual report of the Committee on Forests, Commission of Conservation:

A great deal of attention is being devoted throughout the world to the development of peace-time uses of aircraft. That there will be many such uses requires no argument.

Among the possibilities are forest fire patrol and aerial photography. It is now expected that fire patrols by flying boats will be established during the current year by the British Columbia Forest Branch and by one or more of the forest protective associations of Quebec, assisted by the Quebec Government. The St. Maurice Forest Protective Association is the leader in this respect in the East, as the British Columbia Forest Branch has already proved in the West. It is believed that there are large possibilities also in connection with aerial fire patrol on Dominion lands in the West, through the Dominion Forestry and Parks Branches. Many men whose experience in aviation overseas should qualify them to express thoroughly practical opinions state that, beyond question, these things are eminently feasible.

Similarly, there is undoubtedly a large field for developments along the line of aerial photography, both in connection with forest protection and independently. The recent address of Colonel Cull before the Geodetic Society of Ottawa showed some of the possibilities of aircraft in furthering the line of work with which the geodetic survey is particularly concerned.

The possibilities in connection with forestry work are also very great. There are vast areas in all our provinces, where only fragmentary data are available as to drainage and topography, or as to the extent, composition, and volume of the forests. As a result of war developments, the importance of our forests in the national economy is now recognized as never before. An adequate knowledge of the character, location, and extent of the forests of Canada is essential to the proper administration and exploitation of this vital resource.

The Commission of Conservation made a survey of the forest resources of British Columbia and Saskatchewan, although the data available as to extensive areas were of the most fragmentary character. Similar work in other provinces is planned, as rapidly as the necessary funds can be secured. The prosecution of such projects would be enormously simplified and the results would be much more accurate and valuable, if necessary work on the ground could be supplemented by systematic surveys made by means of aerial photography. Such surveys might, of course, serve other public purposes as well. This suggests the extreme desirability of co-operation between all agencies interested, Dominion and provincial, as well as private.

The public interest involved in all these questions is undoubtedly very great. If adequate developments along these lines are to be anticipated on a par with those planned in other countries, it would seem logical that the Dominion Government should take the lead in making the necessary plans and in providing the equipment.

How two progressive firms at Sault Ste. Marie, Ont., get after business by attractive advts. in the local papers

they don't know whether they guess right or not. Some men seem to have the notion that if they come out at the end of the year with a profit it makes no difference whether it has been made out of the "side line" or lumber. So what is the use of bothering to keep separate accounts? When one gets into the habit of thinking and doing this way it is not an easy thing to change.

This, of course, is more apt to be the case with individual dealers who, having but the one yard, do not consider it necessary. But with a string of yards a systemized policy is essential to the success of the business, and most line yards have a divisional system also and by this they know whether they gain or lose on any item of stock they are carrying.

I am aware of the fact that it takes considerable extra book-keeping to keep an account with so many stock items as are in the average yard, and so I have thought that this could be avoided by dividing the yard into departments, perhaps four of these would be sufficient, putting lumber and millwork into one; coal in another; cement, and all other plasterers' and masons' materials into another, and all the rest of the stock into a department of miscellany. This would cover the different stocks carried in the ordinary yard and by making these divisions it would economize labor in keeping the books, and at the same time afford the dealer the required knowledge of his business. He would then know whether lumber was bearing more than its share of the cost of carrying on the business and let him know which department is not bearing its proportionate share. I think this method would in some cases simplify a system which is now overloaded with system. This is not a new idea, although its application may be new to those country dealers who still follow the old system of "bunching" things as they do in the common general merchandise store in your town. Go into that store and ask the proprietor how much profit his groceries net him, or his shoes, clothing, or dry goods. Ten to one he can't tell you because he has no system for keeping a separate account of each line of goods.

Trouble From Lack of Proper Accounting

This lack of an accounting system has been the main trouble with the farmers. I well remember asking twelve representative farmers to let me know in writing their estimate of what it cost them to raise a bushel of wheat and corn respectively. After a time I got in all their answers and it was amusing to see the wide divergence in some of them. The majority had not counted in the interest on

Use of Motor Truck in Logging Grows Rapidly

Proper Roads are Essential to Successful and Economic Operation—Good Make of Truck and Trailer is Desirable—Expense and Upkeep

It is only three years since logging trucks were first adopted at all generally by operators on the Pacific Coast, yet in that short time the number in use has jumped from about half-a-dozen to some five hundred. This rapid development of motor truck logging is mainly due to the adoption of a practicable trailer, which is necessary to the successful economic operation of the truck, because of the size of logs taken out in the Pacific Northwest. The advantages of the truck and trailer combination are many. Three times as great a load can be hauled as by the truck alone; fuel is saved, as an engine will pull a load to capacity where it can't so carry a load; time is saved, obviously, as increased loads lessen the number of trips; labor is saved, as the number of loading operations are, of course, less when each operation disposes of a greater quantity; and, finally, longer and bulkier logs can be taken out.

As to what can be done by means of truck and trailer haulage. One logger reports that on an eight-mile haul he averaged six trips daily, hauling from 3,000 to 5,000 feet a trip; another states that he makes four or five round trips daily for distances of from two to seven miles, and hauls anything from 15,000 to 40,000 feet of logs, depending on the length of haul and the condition of the road; on a seven mile haul another logger makes four round trips daily, averaging 4,000 feet a trip. A single truck and trailer was used in each instance.

The Question of Cost

As to the expense of operation, some interesting figures, giving the cost to a logging concern across the line, recently came to our notice. We give them hereunder:

Cost of truck (as basis), 5 ton	\$5,000.00
Cost of trailer (as basis), 8½ ton	1,700.00
	\$6,700.00
Depreciation at 25%	\$1,675.00
Interest at 7%	469.00
License	50.00
Taxes	
Insurance	75.00
Total	\$2,269.00
Per day, based on 300 working days	7.60
Variable Charges—per day.	
Tires, guaranteed 7,000 miles	\$ 4.40
Gasoline (4 miles to gallon at 25c)	2.50
Oil and Grease (estimated)50
Wages	6.00
Repairs (costs averaged)80
	\$ 14.20
	7.60

Total per day

From the above it is easy to estimate what the cost would be on

this side. Duty would have to be added to the original investment and to subsequent expenditures for tires, part renewals, etc. There would be little other difference, as some of our operations on the lower Mainland are conducted in similar timber and over much the same kind of ground.

Specially Constructed Roads Necessary

The road problem is important. In the States, pole roads and concrete roads are the two types favored by loggers. Where concrete is used, grades may be steeper, as concrete affords better traction than wood. Six per cent is as steep a grade as is advisable on a pole road; as high as twelve per cent is practicable on concrete. As the average width of a logging truck is 7 feet 6 inches, measuring from the outer edge of the wheels, at least 8 feet of road is necessary, or about 12 feet in all, with the sub-grade. Ditches should be made, and there should be outlets for the water flow every fifty feet.

A good pole road is made with heavy single poles for the main track and lighter poles on the outside for guard rails, and on the inside to support the steering wheels. The main poles should be about twenty inches in diameter, and the longer they are the more serviceable they will prove. The top sides of the main poles are hewn to a flat surface, 16 inches wide, and the poles are laid half buried. Every ten feet or so the poles rest on cross ties, to which they are securely spiked. The guard rails are firmly braced and spiked to the main poles. The inside poles are hewn flat and laid level with the main track.

In the concrete road two tracks of concrete, one for each wheel, are used. The concrete lies in ditches 26 inches wide and 6 inches deep, and it has a guard lip of about 4 inches in height and 4 inches in width along its outer edge. Where material is available, a concrete road probably costs twenty-five per cent more to build than a pole road.

Good roads are very necessary to the successful operation of trucks in logging, and in the experience of operators the initial expense in providing them is more than made up in subsequent saving of wear and tear and time. Trucks "live" much longer when run over good roads, they haul bigger loads, and logs are less often shaken off—a fruitful source of waste labor under unfavorable conditions.

"Lumber Export Bulletin" is the name of a new fortnightly periodical published by The Lumbermen's Bureau of Washington, D.C. The first issue contains current exporters' selling prices f.a.s. of pitch pine, hardwoods, Douglas fir, California sugar pine, and redwood; a Tonnage Review and Table of Current Ocean Rates; Foreign Exchange; Review of Foreign Markets, and Inquiries for Lumber from Foreign Importers.

Illustration shows rapid development in the use of motor trucks in logging operations.

Further Particulars on Request

BROWN COMPANY, Portland, Maine

For Sale

Building and machinery of good Double Cut Band Sawmill, well equipped with steam feed, canter, loaders, etc.
Also two storey Brick Factory on large lot convenient to two railways; splendid location. Address Box 949, Owen Sound, Ont. 12-t.f.

Timberlands For Sale

2½ million ft. Birch and Maple.
½ million ft. Hemlock and Pine.
Situating 100 miles north of Toronto, 1 mile from railroad. For particulars write

E. J. WHITE,
15-18 15-16th St., Buffalo, N.Y.

For Sale

Hardwood Timber Limits of about seven million feet, with up-to-date sawmill.

BEDFORD MANUFACTURING CO.,
15-18 Waterloo, Que.

Opportunity in Lambe Business

Will contract sell red cedar timber as cut—150,000,000-foot tract. Quality and accessibility good. Grand Trunk Railroad.

J. RANDALL BLACK,
14-17 Edmonton, Alberta.

Timber Limit For Sale

Situated in Northern Ontario, 27¼ square miles. Estimated quantity of pine thereon upwards of 10,000,000 feet, as well as spruce and other timber. For full information apply to W. E. Bigwood, Bank of Hamilton Building, Toronto, or Byng Inlet, Ontario. 15-18

ATTRACTIVE TIMBER PROPOSITION

has been placed in my hands for immediate sale; an exceptional opportunity to secure excellent timber lands at a moderate price. Call at office for particulars. W. Cooke, 203 Stair Building, Toronto. 16

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
134 South LaSalle Street,
5-t.f. Chicago, Ill.

**Saw Mill Property
FOR SALE**

Picnic Island sawmill plant at Little Current, Georgian Bay, 37 acres, for sale or lease for a term of years, or might put it in a good sized company, part cash, part stock; cutting capacity 140 M. a day, two thousand feet stone-filled lumber docks, 16 ft. water, Algoma railway station less than a mile distant, log booming capacity 10 million, telegraph and telephone, school taxes only, title from Crown, no debts or disputes; one of the best mills on the Bay, selling cheap to wind up an estate. For further particulars as to the mill and about twenty other buildings, etc., apply to Thomas Conlon, 44 Church Street, St. Catharines, Ont. 13-16

A Business Opportunity

A company located in a mixed population, nearly all speaking English, wishes to dispose of its business, consisting of Saw, Planing and Shingle Mills, with timber standing and in sight for several years. A good Custom Sawing and Dressing in Transit trade is established. Reason for selling, illness of principals. Address Box 990, Canada Lumberman, Toronto, Ont. 15-16

**Virgin Timber
For Sale**

I have for sale, on very easy terms, in Virginia, 3,000 acres of Virgin Timber, mostly Shortleaf Pine, with some Oak. It is estimated to cut about 17 million feet of pine and oak, with a percentage of white wood, cherry and ash. Railway runs through the centre of it. The land will be worth \$50.00 an acre after it is cleared. Apply

DON. M. CAMPBELL,
15-18 Preston, Ont.

**1300 Acres of Standing Timber
FOR SALE**

It consists of Birch, Basswood, Ash, Maple, Pine, Spruce, Cedar, Hemlock. Camps, logging equipment and sawmill on the ground; owner not a lumberman, engaged in other business. The said lands are located right on C. P. R. and C. N. R. sidings, six miles west of North Bay, better known as the Indian Reserve. Apply to

P. ADAMS,
15-18 North Bay, Ont.

Miscellaneous**For Sale**

One Detroit Hot Blast, Dry Kiln System, complete with Fan and Engine, also 35 feet of 9" double leather belt, used two weeks.

Port Hope Veneer & Lumber Co.,
13-t.f. Port Hope, Ont.

FOR SALE—FIRE BRICK

4,150 Fire Brick Arch Blocks, 9 x 9 x 4¼" to 3¼", in first class condition, at Toronto, Ont., suitable for arch of Dutch Ovens. Elk Fire Brick Co. of Canada, Ltd., Hamilton, Ont. 16

**Canadian National
Railways****CENTRAL LINES**

Sealed tenders, addressed to the undersigned and endorsed "Tender for Ties," will be received at this office until twelve o'clock noon, Monday, 25th day of August, for 1,375,000 Railway Ties to be made and delivered between October 1st, 1919, and October 1st, 1920, in accordance with tie specification No. 3856, dated March 18th, 1919.

1,000,000 to be delivered on Canadian National lines between Port Arthur and Pembroke.

50,000 to be delivered on Canadian National lines in Central Ontario.

25,000 to be delivered on Canadian National lines between Ottawa and Quebec.

200,000 to be delivered on Canadian National lines between O'Brien and Quebec.

100,000 to be delivered on Canadian National lines Lake St. John District.

Tender forms and specifications can be obtained at the office of the General Tie Agent, No. 9 Toronto Street, Toronto.

Tenders will not be considered unless made on forms supplied by the Railway.

No tender for quantities less than 10,000 ties will be considered.

The lowest or any tender not necessarily accepted.

E. LANGHAM,
General Purchasing Agent,
Canadian National Railways,
15-16 Toronto.

Review of Current Trade Conditions

Ontario and the East

There is no particular change in the general situation so far as the lumber market is concerned, except that manufacturing conditions are moving along smoothly, the demand is steady, stocks getting lower and prices growing firmer all the while. There is developing in some centres a pronounced scarcity of dry lumber, and hemlock is pretty well in the hands of a few who have been shrewd enough to buy up cuts of the mill. Building continues very active in Toronto, Montreal and other larger cities, and in some of the smaller towns there is quite a movement in favor of the Ontario house-building campaign. The demand from across the border is steady and heavy shipments of white pine are being made.

It is feared that car shortage may develop in a few weeks when the western grain crops begin to move. It will not be surprising to several of the larger lumber concerns of the East if an application is made to the Dominion Railway Board at an early date for an increase in freight rates, in order to meet the demands of the men for higher wages and to cope with the constantly increasing cost of operations. Everything portends an ascent in the value of lumber of all kinds for many months to come. Those builders and others who have been hanging back, thinking there would be recession in prices after the war, have to admit they have been sadly astray in their calculations. It does not do to go into the prophecy business, particularly in times like these, when old traditions are being shattered over night and ordinary methods revolutionized. The "Canada Lumberman" remembers hearing one of the shrewdest buyers remark on the day that the armistice was signed. "Well, wait until you see lumber take a drop now, for the war demand was the strongest prop that the industry had to boost values. That prop is now removed and quotations will tumble rapidly; just you tarry and see." That was eight months ago and, instead of the decline, there has been a steady increase, and the end is not yet.

The export situation is looking up a little more favorably and there has been a slight reduction in ocean freight rates, which, small though it is in the right direction, and is being heralded as a good omen.

The woodworking and furniture factories are all operating, a number of them with orders ahead for several months, but there is a considerable handicap owing to the shortage of skilled labor. There has been a splendid demand for oak, elm, birch, maple and other hardwoods. Automobile concerns are rushed with business and piano manufacturers, phonograph producers and others, are having a busy season. The hardwood situation is on the whole very strong, and prices in some lines have jumped materially.

Western stock still continues to soar in price and flooring, casing, ceiling, jointing, and interior trim having recently undergone radical changes so far as values are concerned. Eastern representatives of Coast and Mountain mills wonder when the aviation will cease. Shingles are jumping by leaps and bounds and there does not seem to be any figure to which they may not reach. The result of the high prices is that ready-roofing manufacturers were never so busy in their careers and this demand will likely continue until shingles come down to somewhere near normal.

The only B. C. stock that remains stationary is dimension timber. All the operating companies are preparing to increase their output in Ontario and the east during the coming season—in fact, some concerns will more than double the number of their camps if sufficient men are available.

Wages are rating about the same as last year, and the cost of provisions is higher on a number of items of food, so that there will be no decrease whatever in the expense of getting out timber. It is predicted the quantity that will be felled during the coming fall and winter will be greater than any season since the outbreak of the war. Even with the augmented production there will likely be a scarcity of forest products in 1920, as it is expected more space will be available on ocean steamers for commercial shipments and the present freight rates will be somewhat equalized. It will not be until next year that the great reconstruction campaign in France and Belgium and other countries gets underway, while the British house-building movement will have gained considerable impetus by the beginning of 1920.

The general situation is very strong and the demand keeps ahead of the supply. There is a scarcity in practically every line. There is a strong requisition for hardwood and, in many instances, the yield

is not equal to the number of calls received for birch, bass, elm, ash and oak. Manufacturers are all busy and prices on many lines have soared sky-high.

The figure which certain sizes and grades command depends largely on how badly the purchaser wants the stock and for what purpose it is to be used, or if the seller can obtain a big consignment, or pretty well controls the situation in his own town or city.

A number of Ontario manufacturers of white pine are declining to sell American buyers a Tonawanda grading, such as No. 1, 2 and 3 barn, etc. They insist that all transactions shall be mill run with culls and clears out, or on a box and better basis. Those firms across the border who are taking deliveries on a mill run basis are well satisfied with the results. Recent outputs of mills show that white pine disposed of under this system runs in No. 3 barn and better, to a very large percentage of No. 2 barn.

During the month of May the exports of pulpwood decreased \$828,587, the total being \$608,199. For the two months of the fiscal year the total was \$1,237,388, a decline of \$834,542. During the same period exports of mechanical and chemical pulp declined, but newsprint showed a very large increase.

Owing to the abnormal state of the market and rapidly rising values on a number of lines, it is not possible to give stable market quotations in many instances. Prices and stocks fluctuate in many centres according to supply and demand. The market is largely an open one.

Great Britain

There is a measure of optimism observable in importing circles among those firms who are pulling together to bring about the downfall of freights, but, up to the present, it is not believed that there is anything of a tangible nature to base a conclusion upon a successful issue from the struggle. One outcome of the fight is noticeable in a sudden cessation of c.i.f. quotations for Swedish stocks, which makes it probable that the shippers themselves have feared to operate for fear of finding a slow market in the event of goods arriving upon this side unsold says "The Timber News."

From enquiries we have made in several directions, it can be clearly stated that all sections of the timber trade are anxious to see lower rates of freight, for it need hardly be pointed out how unsatisfactory it is to note the effect upon the market of rates which are eight to nine times as much as those existing in prewar days. Opinions, however, are decidedly mixed when the methods of fighting the shipowners are discussed.

Spruce deals, etc., have arrived for the Controller by the War Ottawa, from St. John; pine deals and boards by the Canada, from Montreal; and pitchpine lumber and logs by sundry steamers.

Freights by available tonnage from Canadian ports rule very high. The Government continues to practically monopolise the space in the regular liners, and there will be very little opportunity granted the usual importers to bring over supplies this season. The Government purchases in Canada are very considerable, and as yet only a small quantity have been shipped. Some shipments of pine have arrived this week. The demand for this wood is very strong, and it will need heavy additional arrivals to satisfy urgent needs. The Controller has practically fixed the price for pine, as the privately-imported wood will of necessity bring similar figures to the Government stock.

Stocks of birch at Liverpool are not heavy. A fair demand exists for planks. Occasional parcels are coming through at figures in the neighborhood of £43 c.i.f. for Quebec, and £32 c.i.f. for Halifax. Quebec logs are badly needed as there are none available to stock. Round logs are offered, but waney logs are scarce. There have been a few deliveries of sawn pitchpine timber. The demand is steady and values are firm.

There has been little moving with respect to Scandinavian and Finnish business. Freights from the Baltic are still high, and the action of the importers in refusing to pay the exorbitant rates has not yet succeeded in its object.

Building operations have been exceedingly slow, and with no incentive to launch out housebuilders are not in the market for material. The Government scheme is apparently for the future, and certainly little benefit is likely to be felt until next year. Then, no doubt, the call for deals and the special building sizes will be greater than the supply. The signing of peace has not been marked by any

B. P. BOLE, Pres. F. H. GORF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

special development in timber circles. It means, however, that continental countries will soon become competitors as purchasers of wood goods. In the countries that were at war the quantity of lumber manufactured during the past three or four years was very low, even where timber was fairly plentiful. How the financial difficulty is to be overcome is a bit of a puzzle.

This country, rich as it is, does not look at the figures demanded at present for sawn wood with equanimity. The value of the wood imported on these prices imposes a strain on the country's resources, that is not lightened because the wood costs more to produce. It has to be paid for, and at a time when other demands are very heavy. How the countries that have suffered financially through the war are to carry out their transactions is a question difficult to answer today.

United States

The general market situation shows a steady improvement with strong tendencies to higher prices and the demand varying according to the building activity and local conditions at various points. In some localities there is not much change but in others the market is largely an auction one. It is interesting to note that taking 1913—the year before the war, as a normal one—and placing the output of lumber at 100 per cent., that there has been a decreasing annual cut during the past five years with the exception of 1916. The percentage as compared with 1913 is as follows: 93.4 in 1914; 86.3 in 1915; 90.9 in 1916; 81.8 in 1918; and 72.7 in 1918.

In the North there is very little hemlock available for sale. Perhaps nothing conveys a clearer idea of the true situation than the fact that for members cutting 91 per cent. of the hemlock produced by members of the Northern Hemlock & Hardwood Manufacturers' Association, shipments have excelled production by 61,000,000 feet so far this year. Furthermore, these same mills have on hand less than 33,000,000 feet of No. 3 hemlock, the smallest amount which the mills have had on hand since 1914.

In the North, the heaviest hardwood sawing season is past. Yet today in the field of the Northern Hemlock & Hardwood Manufacturers' Association, there are at least 25,000,000 feet less of No. 3 common and better hardwoods on hand than on March 1 of this year.

Furthermore, production for the last six months of 1918 has been 45,000,000 feet less than in the corresponding six months of 1918. This condition prevails throughout the North, while in the South stocks in the hands of manufacturers have been depleted even more than they have in the North.

Taking the southern pine situation as a whole more men are available but this has had little or no influence upon production which is proceeding at a pace which does not keep up with the demand. Perhaps taking the country as a whole, the price situation has been a bit more settled, though any definite clean cut statement regarding prices is very different to make because there is no such thing as a price list and a seller knows what he is going to ask twelve hours in advance. Considerable advances have been made upon a few items which are very much in demand such as B&B flat grain flooring, which has sold for as much as \$70 f.o.b. mill.

The retail trade in the immediate vicinity of white pine producers is somewhat quieter and there is less of a tendency on the part of retailers to jump at lumber offered. On the other hand, the demand for industrial stock and for shipments east and south is good and the mills find no difficulty in disposing of all the lumber on hand even at the heavy advances in price recently put in effect. Reports from nine mills to the Northern Pine Manufacturers' Association show shipment of 6,459,953 feet of lumber and 1,874,200 lath for the week ended July 26, compared with 6,417,591 feet of lumber and 1,266,850 lath for the previous week. Orders received are reported at 2,665,568 feet compared with 3,916,309 feet for the week before. Production was 8,213,061 feet of lumber and 1,405,050 lath, compared with 6,200,952 feet of lumber and 1,243,650 lath for the previous week.

Buyers of red cedar shingles are now reaping the benefit—if they so care to term it—of the Fourth of July close down on the Pacific coast. Red cedar shingles are scarcer than ever and have made rapid advances during the last two weeks. Efforts are being made to increase production on the Coast and there will be a larger supply of shingles available for sale, in two or three weeks. When more shingles are available for sale, the situation will steady down, but so long as the demand exceeds the supply advances are certain.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Reports Several Favorable Features

Increased firmness as to the tone coupled with a sharp advance in prices, featured the Ottawa lumber market during the opening period of August. From all sides come indications of trade picking up and business getting better. The building grades started to move, indicating that building activities are on the upward trend, though, no great boom is on as yet.

As compared with a corresponding period a year ago the market all around was better even making allowances for the big consumption of shell box stock which was then in good demand. Another bright spot in the market was that of the free transportation of large cargoes of lumber to Europe on Government account.

Such shipments are going ahead fast on the Canadian order placed by Sir James Ball, the British Timber Controller, during his recent visit to Canada. Lumbermen generally look on the quick movement of this lumber as a good sign and predict that it is stimulating the home market, as stocks of dry lumber are already low and this year's saw mill cut will be below the average.

A hundred dollar figure per M. feet in the price list was reached in the second week of the month, the grade being 2 in. by 7 in. good pine sidings. A jump of six dollars per thousand feet in spruce occurred in the New York market and the advance had its effect locally. Pine prices throughout the valley advanced generally from \$2 to \$7 per M. The market was largely pine. The offerings of spruce stocks were small.

Stocks of dry lumber (while there is not yet exactly a scarcity if one cares to pay the price) are far from being plentiful. The cut of the manufacturers has been pretty well sold, and the wholesalers are standing pat or asking higher figures for whatever stock they have.

The labor situation did not show much change. Transportation remained good, and export conditions to Europe on consignments on other than government account did not show improvement. Many of the trade are quite satisfied with the way transportation to the Old Country is going. They point out that the sooner the orders on

government account get across the quicker the ocean tonnage will be freed for private shipments.

With the sawmill season well advanced, and no great amount of stock yet unsold, lumbermen are generally agreed that every grade of stock is going to be scarce, and the indications are that prices will go still higher. The activity in the building lines, several of the dealers believed, was not for immediate use, but will likely be carried over until next spring, when the greatest revival of building since 1914 is expected.

Orders and inquiries continued good, the chief demand being from the United States. The domestic trade also showed improvement. The increase in the price of shingles is largely attributed to the limited production brought about by the decreased demand during the war years, and owing to the big shipments of this staple which are not being exported to England and other European countries.

Even western shingles are scarce. "The western shingle manufacturers have their hands full and are not able to produce any more," was the opinion expressed by one of the leading lumbermen. Shingle production in the Ottawa valley fell off last year, and indications are that this will be another lean year.

Activities with the woodworking plants and factories showed little or no change. The labor situation with such plants remained practically the same as in July.

Preparations for bush operations and the establishment of camps went ahead fast. The "Canada Lumberman" has been definitely informed that the larger operators in the Ottawa Valley this year are going to attempt to double last year's woods production if possible. There is, consequently, a great demand for woods labor with high wages being paid.

Buying Stimulates Higher Prices in Montreal

The American demand is still the outstanding feature of the Montreal market. Firms doing business across the border state that the threatened industrial upheaval there has not affected business; that

ST. JOHN, N. B.

orders continue to be excellent; and that prices are very stiff, with an upward tendency. For a long time buyers refused to come into the market, holding that prices were too high. Now they are eager to purchase, and under this stimulus quotations have gone ahead. There are renewed inquiries for both, which is difficult to get.

Business in B. C. products is dull, the increased prices being against the taking of orders. The price of logs has again gone up.

Hardwoods and veneers have been slow, but are picking up.

Local trade is fair and promises to improve.

Building is broadening. The Montreal building permits for July were the highest in any one month since war broke out, totalling \$1,484,999, an increase of \$874,954; for the seven months the aggregate was \$4,372,423, an increase of \$1,703,013. Progress is being made with the Province of Quebec housing scheme. A technical commission has been appointed to supervise the planning of the houses and to see to the sanitary arrangements. The houses are to be mainly of the terrace type, built in squares, with gardens and community playgrounds. The cost of the commission is to be met by a tax of 2½ per cent. on the amount of the loan, which will total \$7,000,000. Reports from the province show considerable building activity.

Owing to the strike in Liverpool, which has delayed unloading, there has been a scarcity of vessels arriving in the port. This has caused the shipment of lumber on Government account to ease off. All the U. K. ports are congested, the general labor conditions in the Old Country being adverse factors in the prompt dealing with cargoes. Little commercial lumber is going, the prices ruling not being sufficient to warrant sending at the present freight rates. Cables received from England report that the market for spruce and for American hardwoods has declined. A change has been made in the method of paying for freight. The steamship companies formerly were paid on the other side; they then stipulated that the freight should be prepaid, and have now gone back to the original method. The pulp and paper companies have for some time complained of the inability to secure tonnage, resulting in a loss of trade to the Dominion. Cables from London and also inquiries here show that there is likely to be relief in this respect, and that the mission of Mr. A. L. Dawe to London, has done something towards getting more space for this important Canadian industry.

How Lumber Prices are Ascending

Mr. Wm. Little, of Westmount, Que., who is a veteran lumberman but still active and keen in spite of his eighty odd years, sends the "Canada Lumberman" the following, which will be read with interest. Mr. Little says:—The prices of the Ottawa manufacturers on white pine as recorded in your paper for the years July 12th, 1899, and July 1st, 1919, are as follows:

Ottawa Manufacturers' Prices

	1899	1919	Mean Difference
Pine, good sidings, per M. ft. b.m.	\$31.00 to \$36.00	\$77.00 to \$95.00	\$52.50
Pine, good strips	25.00	27.00	60.00
Pine, good shorts	17.00	28.00	58.00
Pine, No. 1 dressing sidings	15.00	21.00	53.00
Pine, No. 1 dressing strips	14.00	16.00	48.00
Pine, No. 1 dressing shorts	10.00	12.00	40.00
Pine, 10 s.c. and better stocks	13.50	15.00	44.25
Pine, 8 s.c. and better	11.00	12.50	41.75
Pine, 8 and up s.c. sidings	11.00	13.00	42.00
Pine, s.c. strips	8.00	10.00	44.00
Pine, s.c. shorts	7.00	8.50	40.75
Pine, box culls	9.00	10.50	42.00
Pine, mill culls	7.50	9.00	40.00
Lath, per M., No. 1	1.00	1.25	6.00
Lath, per M., No. 2	.85	1.00	5.50
1 x 10 No. 1 barn	18.00	20.00	52.00
1 x 10 No. 2 barn	16.00	18.00	46.00
1 x 8 No. 1 barn	17.00	19.00	42.00
1 x 8 No. 2 barn	15.00	17.00	40.00
Spruce, mill run	10.00	12.00	42.00

The foregoing shows the increased prices of white pine lumber, the product of Ottawa mills, and yet there are some wise people who wonder why spruce and hemlock must take the place of white pine. The latter is rapidly advancing in price while ordinary mill run spruce that was valued at about \$10 per M. feet in 1899 is now, just 20 years after, valued at \$42 per M. feet at the mills.

Imperial Forestry Conference Will be Held

A recent despatch from London, Eng., says: As the outcome of a suggestion emanating from Canada, which was cordially adopted here, an Imperial Forestry Conference will be held in London during the coming winter.

It is proposed that the conference should coincide with the projected exhibition of Empire-grown timber, and as soon as the date of

the latter is definitely fixed, and the necessary Treasury grant obtained, the Dominions will be invited to appoint delegates.

In order that the proceedings may be conducted on a business-like basis, a request will be made that the papers prepared by the delegates for submission to the conference should follow definite lines, viz.:

(1) Production of timber.

(2) Conversion of timber (felling, conveyance to milling, grading, etc.)

(3) Organization of personnel.

The proposal is that the first two or three days should be spent in reading and discussing papers, followed by a couple of days' excursion to selected areas of the country, during which the delegates will have an opportunity of getting to know one another.

After their return another couple of days might be spent in formulating practical measures for the advancement of forestry in the Empire, such as training and exchange of personnel, and the establishment of a permanent bureau for disseminating information and encouraging research.

Importance of Careful Slash Burning

A large audience assembled at the office of Justice Lemieux of Kedgwick, N.B., July 16, to attend the trial of twenty-one offenders under the Forest Fire Law. The cases covered neglecting slash fires, neglecting to report forest fires to the fire warden, and neglecting to secure fire permits.

Justice Matheson, of Campbellton, presided, Justice Lemieux, of Kedgwick, acting as Clerk of Court. Forest Rangers Roy, Hocquard, Blanchard, Inspector Brophy, Caretaker Somers and Provincial Forester Prince were present. Asst. Chief Fire Inspector L. A. Gagnon acted as prosecutor on behalf of the Department of Crown Lands.

The evidence was taken in both French and English and the Department took the opportunity of explaining to the people that they did not wish to deal harshly with the residents but that the fire law must be observed in the interests of themselves as well as their neighbors and surrounding timber owners. Justice Matheson gave the offenders severe reprimands, pointing out not only the danger of neglecting slash fires, but the terrible destruction rendered by the recent fires in which nearly \$122,000 damage resulted, and in which many of the settlers lost their homes and property.

It was stated that thirty buildings were burned and three sawmills. Insurance covered about one-half the damage. Justice Matheson ascertained carefully the amount of damage each of the offenders suffered by reason of the fire and the fines against those who lost heavily were allowed to stand. It is interesting to note that none of the defendants pleaded ignorance of the slash burning law, but claimed that they did not expect their fire would do any damage.

At the time of the fire, June 12th, the slash and ground was extremely dry and the fire swept over even hay and oat fields in which there was nothing to feed the flames excepting scattered stumps. In much of the area covered by the fire all vegetable matter is burned out of the soil and it is rendered almost useless.

It is hoped that in the future the residents of Kedgwick will carefully take every precaution in burning, as it is considered miraculous that some of them did not lose their lives in the recent fire as well as their property. Several spent the day in railway cuts to escape the smoke.

Newsy Briefs of General Interest

The Whalen Pulp & Paper Mills, of Vancouver, are making an issue of \$1,500,000 6 per cent. first mortgage and refunding mortgage serial gold bonds, dated May 1, 1917, and May 1, 1919, and maturing in annual series from May 1, 1921, to May 1, 1934.

This is one of the largest Canadian producers of bleached, easy bleaching sulphite pulp, high-grade spruce lumber and cedar shingles. Apart from its mill at Mill Creek, it operates at Swanson, Swanson Bay and Port Alice, B. C. The British Columbia mill is designed for an ultimate capacity of 96,000 tons. The issue will be handled through the Royal Securities Corporation.

The request of the Canadian pulp and paper manufacturers recently made to the Minister of Marine in Canada for more transportation facilities for their products is being taken up in London, Eng. Inquiries have been made at the Ministry of Shipping as to the possibility of obtaining more cargo space. It has incidentally been found that the Harmsworth people now have four steamers with a tonnage of 22,000 engaged in shipping pulp and paper from Canada to Britain; the Becker interests have five vessels of 30,000 tons, and the Erikson interests one ship of 5,500 tons.

Brightening Camp and Kitchen with an ALGOMA RANGE

The influence of a good cooking and baking range flows like an electric current through camp and kitchen. Satisfactory operation and a big faithful service, makes the hard working cooks contented giving them incentive to produce better results. McClary's Algoma Range is built exclusively to meet the requirements of the exceptional appetites of men who are justly entitled to the best that a good range can produce.

The massive dominating construction of the Algoma withstands hard severe service without strain.

The body is of heavy steel with a solid substantial cooking top of cast iron. Made in three sizes with top to suit; with or without reservoir

The Toronto Ferry Co., of Toronto, will build a new boat next season to replace the two lost by fire and not rebuilt during the war.

Alb. Burrows announced recently that the price of civic wood had been reduced \$2 per cord in Brantford. No. 2 wood was now selling at \$14 and No. 1 at \$16.

The saw and shingle mill belonging to E. Leuck, Dornoch, Ont., was completely destroyed by fire. The loss is estimated at \$1,000. The owner intends rebuilding.

The woodworking plant of Cargill, Limited, Cargill, Ont., is shut down due to the shortage of skilled operators. They expect to resume production about the first of the year.

The Crossen Car Co., Limited, Cobourg, Ont., who formerly manufactured a line of sleeping, parlor and passenger cars, etc., have discontinued business. The plant has been completely dismantled.

The sawmill belonging to Geo. Pinkerton, Eagle Lake, Ont., was completely destroyed by fire. The machinery is a total loss. The owner contemplates rushing a new mill to completion. Loss \$10,000.

A. & C. Boehmer, box manufacturers, Kitchener, Ont., have awarded a contract for an addition to their factory. The new building will be two storey brick construction, 95 x 50 and will cost in the neighborhood of \$10,000.

The Irvin Lumber Company, 26 Vine St., Toronto, have sold their property at 1114 Bathurst St., on which a branch yard is located to T. Kinnear & Co., wholesale grocers, who it is understood, will erect a large warehouse on the site.

The Beaver Lumber Company, of Hamilton, have erected an attractive and commodious new office on their premises on Ottawa Street in that city. The new quarters of the company represent the last word in comfort and convenience.

Pulpwood shipments from Northern Ontario in May were considerably less than half the volume in previous month, amounting to only 5,573 cords, decrease of 55.3 per cent. Woodpulp is also down some 187 tons or 24.4 per cent to 579 tons. Paper shipments show an increase of 14.4 per cent. to 6,856 tons.

The Kulbleisch Planing Mill, Stratford, who have been for many years in the woodworking and retail lumber line, have recently branched out and added a new department in the manufacture of bodies for motor hearses, ambulances, coupes, limousines and other equipages.

It is expected that work will shortly be started on the new pulp and paper mill of the Spruce Falls Pulp & Paper Co., which will be erected at Kapiskasing, Ont. The capacity of the plant will be 200 tons a day and the general contractors for the work and large dam which will be built on the river at this point are Morrow & Beatty, Limited, of Peterboro.

Building permits issued by the City Architect's Department, Toronto, during July were practically double, both in number and value, those for July, 1918. They included permits for 14 factories, eight warehouses, 181 stores, 511 dwellings and over 1,500 garages. The cost of these last structures alone totals over half a million dollars. Buildings erected last month total \$2,155,250 in cost, as against a corresponding figure of \$1,095,763 for July, 1918.

A charter has been granted to the Edmund Hind Lumber Co., Limited, with headquarters in Toronto and a capital stock of \$40,000 to carry on the business of lumber merchants and dealers; to operate a saw mill and a planing mill and to do a general contracting business in the erection of all classes of buildings. The incorporators of the company are Edmund Hind, Joseph May and others. Mr. Hind was formerly connected with the Beaver Lumber Co., of Hamilton, and the yards of the new organization are on Gerrard St. E., Toronto.

The cabinet makers', millmen and inside woodworkers' union of Toronto have drafted a new schedule which they will attempt to put into effect. This schedule calls for an eight hour day, 44 hour week; time and a half for overtime; double time for Saturday afternoons, Sundays and legal holidays. Minimum wage of \$26.00 per week; no piece work or contract work; the recognition of the union, a closed shop and a shop committee to be appointed by the men in each shop to meet the management and to adjust any grievances that may arise.

Eastern Canada

The Legare & Tremblay, carriage manufacturers, were recently registered in Quebec.

The partnership carried on under the name of the Milton Shipbuilding Co., Yarmouth, N.S., has been dissolved.

Lumber freight continues high at provincial ports, \$41 per thousand feet being paid from Halifax to the United Kingdom.

The Lewis Lumber Co., Upper Newport, N. S., was recently formed. The partners are Edmund Lewis, Chas. Staples and Ralph Richards.

The Quebec Provincial Housing Commission are having plans prepared for a large number of residences. They propose to spend \$7,000,000 in building houses.

The Scotia Shipbuilding Co., Yarmouth, N. S., was recently formed. The partners are E. B. Ehrigott, E. G. Baker, S. E. O'Brien, G. M. Goudey, G. C. Brown and H. K. Lewis.

Construction, Limited, Montreal, has been incorporated to carry on business as general contractors, builders, and engineers and to manufacture any lines used in connection with this business. Capital \$20,000.

Quinlan, Robertson & Hanin, Limited, Montreal, have been incorporated to deal in timber, lumber and building material and to erect mills and factories suitable for the carrying on the company's business. Capital \$500,000.

Phoenix Construction Co., Limited, Montreal, P. Q., were recently in-

incorporated. Wide powers are conferred on the company under the charter, such as to manufacture and deal in woodworking tools and machinery, railway cars, automobiles and all articles made in whole or in part of wood and to build and repair vessels, tugs and barges of all descriptions. Capital \$100,000.

Thirty-five members of the Technical Section of the Pulp and Paper Association attended the summer meeting held from July 28 to August 1. The members went by steamer and rail from Montreal to Quebec, Chicoutimi, Kenogani, St. Alphonse, returning to Montreal. The plants at Chicoutimi and Kenogani were inspected, the visitors being the guests of Price & Co., Ltd., at the latter place. On the boat a business session was held, at which papers were read by Messrs. O. F. Bryant and G. Meerbergen.

The last of the wooden war time vessels built in Canada for the French government was launched recently at the Cote St. Paul ship yards of Fraser Brace & Co., Montreal. Canada undertook to build fifty wooden vessels for France and the work in this connection is practically completed. Of the fifty, twenty-five have been built on the Pacific Coast. The other twenty-five have been in the hands of the Eastern Construction Co. The wooden ships have no attractive names but are being called by numbers.

Plans of the big dam which is to be constructed on the Nashwaak river, near Marysville, N. B., by the Nashwaak Pulp and Paper Co., of which Hon. N. M. Jones is general manager, have been filed with the Lieut.-Gov. of the province in accordance with the provisions of the Act passed at the last session of the New Brunswick legislature. It is understood that the Nashwaak Co. will proceed with the erection of their big sulphite pulp plant at Marysville in the near future and will eventually remove the present plant from St. John to Marysville.

The plant of the Cape Breton Pulp and Paper Co. at St. Ann's, Victoria County, is very busy at the present time and about three hundred men are employed. The company is looking for additional help. A large new barking drum is being installed. Gangs of men are at work taking out large quantities of pulp wood and making roads in order to facilitate the movements of the motor trucks, which will deliver the product to the pulp mill. Shipments of pulp have been made by steamer to several points in the United States and it is the intention of the directors to erect eventually a paper mill, which will convert the raw material into the finished product.

Western Canada

The Empire Timber Products Co., Limited, of Vancouver, has been incorporated with a capital stock of \$100,000.

The Redonda Island Lumber Company has just been incorporated in B. C. The headquarters are in the state of Delaware. The authorized capital is \$200,000 and the head office in the province will be in Victoria.

One million shingles daily is the output of the Dominion Shingle and Cedar Mills at New Westminster. There are sixteen machines operating and still the demand is incessant.

Large shipments of shingles are being made daily by Cedars, Ltd., of Lynn Valley, to eastern Canadian points. Three motor-trucks are being used to haul the product of the mill to the south shore.

Recent rains have extinguished the forest fires on the Bow River, and according to information given out at the local office of the forestry Branch of the Dominion Government, all the fire fighters are being recalled.

The Beaver Cove Lumber & Pulp Co. will be operating their new plant at Beaver Cove, B. C., by Sept. 1st. W. O. King, treasurer of the company, and Mr. White, president and general-manager, recently paid a visit to the new industry.

Papers of incorporation have been granted to the Edgecumbe-Newham Company, Ltd., which acquired the old Stoltze shingle mill at Cedar Cove, Vancouver; the Great West Logging and Lumber Company and the Mc and Mc Logging Company.

James Whalen, of the Whalen Pulp & Paper Co., recently paid a visit to British Columbia on an inspection of the company's plants. Mr. Whalen is the pioneer pulp man of the coast and the founder of the Whalen Company. When the company was recently organized and Sir Geo. Bury became the president and active head, Mr. Whalen became chairman.

The North American Lumber Yards, Regina, Sask., were burned recently. The fire broke out in a nearby livery barn and spread rapidly owing to the fire engine refusing to work. By an extraordinary effort the flames were, however, confined to the lumber yard, the loss of which is partly covered by insurance.

Due to the strong demand for tonnage on the Pacific coast, charter rates are remaining firm. They are approximately as follows: to Sydney, N.S.W., \$32.50; Melbourne, Australia, \$37.50; Chili, \$32.50; South Africa, 22s.; United Kingdom, \$52.50 to \$55. The rates to Valparaiso and Callao have been increased by from 5 to 7½ per cent.

Reports from Vancouver Island indicate that they are having a busy time there. Five mills are operating in the Alberni district, four in the locality in and around Courtenay, the V. L. & M. Company at Chemainus is running to capacity, the New Ladysmith Lumber Company is operating two mills. At Qualicum there are two mills going full blast and at Duncan there are three. There is also one working at Cobble Hill.

The Sterling Lumber and Shingle Co., B. C., owned and operated by Munchi Ram, and J. Tack, the foreman, were fined \$200 and \$150 and costs, respectively, recently. The mill was charged with having operated a locomotive and donkey engine without the proper fire-fighting equipment, and the charge against the foreman was one of hindering and impeding the forest rangers in the performance of their duties.

Plans were completed and the work commenced recently to establish the Nicola Pine Mills, Ltd., in Merritt. It will be remembered that some months ago the splendid plant and yards of the company at Canford were completely destroyed by fire, since which time strenuous efforts have been made by the citizens to have this industry established at Merritt. With this object in view, a joint stock company was formed to purchase the Blair property, situated south of the Coldwater river, between Merritt and Middlesboro, immediately adjoining the city limits.

Two Hundred Years is Average Tree Age

Many Monsters are Much Older but Dimension of Trunk
is no Guide Regarding its History

A tree's size is no guide to its age. A good many people fail to get a grip on that fact. From time to time articles make the rounds of magazines and papers, purporting to give instances of very old trees in various parts of the world; and the farther away these trees are, the greater interest some people take in them. In almost every such instance, the estimate of the tree's age is based on its size. However, a tradition is sometimes cited to give authenticity to the claims of great age.

There are two reliable methods of fixing a tree's age, and only two. One is, to count the growth rings from the centre to the bark. It will not do to count part of the rings and destimate the balance, because a tree does not generally grow at a uniform rate during its whole life, and some of the rings are wider than others. The number of rings gives the tree's age in years, because each year produces one ring. The other method of arriving at a tree's age is to consult a record of the time when it began its existence and of the time when it fell. The included period represents the tree's age. In some instances such records are obtainable for old trees, but usually they are not. It is not ordinarily practicable to count the rings of a standing tree, though it may occasionally be done. For that reason, the ages of standing trees are seldom determined by counting their rings.

The conclusion that because a tree is very large it must be very old, is the result of faulty reasoning; but there are many instances where such conclusions have been announced as facts. A certain cypress tree in Mexico, that Humboldt measured, is a familiar example. Because this tree is nearly forty feet in diameter, its age has been variously estimated from 5,000 to 7,000 years. The estimate is absolutely worthless. That massive trunk is made up of a dozen or so smaller trees which stood so closely together when young that they grew fast to one another, thus forming one bale of many smaller ones. The age, of course, is no greater than the age of the oldest of the individuals forming the trunk.

Certain South American trees are credited with being nearly 10,000 years old because they are very large; and in India and Australia there are others of the same sort. Yet those trees may be smaller than others in other parts of the world that are known to be less than a thousand years old.

What, then, is the greatest age that trees can attain? Nobody knows. Some kinds of trees live longer than others. Every tree lives until it meets a fatal accident. If it succumbs to "old age," even that is an accident that never fails to prove fatal, for it weakens the tree so that insects, fungus, or malnutrition kills it. So long as a tree bears leaves, it grows. The average ages of mature trees of certain kinds are pretty well known. The jack pine of our northern states and Canada lives from eighty to one hundred years, if it escapes fire and the axe. Some oaks may attain 500 years, but probably not one in ten thousand is that old. That is believed to be about the extreme limit of the age of white pine; but in the lumbered tracts one would likely count the rings on many thousand pine stumps before finding one as much as 400 years old. Bald cypress may attain an age of 800 years. Some stumps have nearly that many rings. Western red cedar has been known to exceed an age of 1,200 years, and that is about the limit of Douglas fir.

The sequoias or redwoods of California are generally conceded to be the longest-lived of American trees, but a great deal of fiction and guesswork concerning their ages has been published. They are said to be "the oldest living things," and that may be true; but no dependence should be placed in the claim of 4,000 or 5,000 years as the ages of these trees. It is true that John Muir counted 4,000 rings on one of these trees, and he was worthy of belief. He was so worthy of belief that he was careful not to state that the tree was 4,000 years old. He said the rings were so wavy and folded that he was uncertain. Ages exceeding 2,000 years for some of these trees appear to be well authenticated. An exact count and measurement of a tree less than 28 feet in diameter is a record in the United States Forest Service, showing an age of 1,245 years when that tree was cut in 1864. It was one of the largest sequoias on record, though not the oldest.

It is not possible to determine an average age of trees, without being particular to specify the kind of trees, their number, and several other factors. The average age of merchantable trees encountered by one walking through the forests in those parts of the United States east of the Rocky Mountains is probably less than 200 years, though many are much older. Persons who wish to have first-hand knowledge of forest trees will do well to cultivate the habit of count-

ing rings in sawlogs and stumps in various localities and of different species. Such experience will lead to a good deal of practical knowledge of tree ages. It will assist in checking up on some of the wild guesses one often hears concerning ages of trees.

An oak tree that grew in the court yard at Monroe, La., was 49 inches in diameter and 55 years old. In northwestern Oklahoma and southern Kansas there are thousands of oaks older than that and not one inch in diameter. A pine near Monterey, California, was 35 inches and 42 years old. On the high mountains of the same state there are pines much older, yet not large enough for canes. These instances serve to emphasize the fact that size is not a reliable guide to the ages of trees.

Sand Will Do It

I observed a locomotive in the railroad yards one day,

It was waiting in the roundhouse where the locomotives stay;
It was panting for the journey, it was coaled and fully manned,
And it had a box the fireman was filling full of sand.

It appears that the locomotive cannot always get a grip

On their slender iron pavement, 'cause the wheels are apt to slip;
And when they reach a slippery spot their tactics they command.
And to get a grip upon the rail, they sprinkle it with sand.

It's about the way with travel a long life's slippery track:

If your load is rather heavy you're always slipping back:
So, if a common locomotive you completely understand,
You'll provide yourself in starting with a good supply of sand.

If your track is steep and hilly and you have a heavy grade,

If those who've gone before you have the rails quite slippery
made,

If you ever reach the summit of the upper table land,

You'll find you'll have to do it with a liberal use of sand.

If you strike some frigid weather and discover to your cost,

That you're liable to slip up on a heavy coat of frost,
Then some prompt decided action will be called into demand,
And you'll slip way to the bottom if you have't any sand.

You can get to any station that is on life's schedule seen

If there's fire beneath the boiler of ambition's strong machine,
And you'll reach a place called Flushtown at a rate of speed that's
grand,

If for all the slippery places you've a good supply of sand.

Philippines to Export Newsprint

The Philippines are in a position not only to supply newsprint for domestic needs, but to export large quantities of this product. According to a report just made by the Director of the Bureau of Forestry, the raw materials available, such as the bamboo and two kinds of grasses, the cogon and the talahib, are of such good quality and can be so cheaply secured that if this industry is given careful study the islands will not need to import annually \$2,000,000 worth of paper as heretofore.

How Timber Raises All Farm Values

The man who is fortunate enough nowadays to have attached to his farm a wood lot containing a million feet or so of standing timber is envied by the man who allowed his farm to be stripped of logs fifteen or twenty years ago when the price was much lower than it is today, says the Fredericton, N.B., "Mail." While quite a number of farmers living along the river have disposed of their standing timber within the past year or two at a price greater than that which they would have at one time readily accepted for the entire farm, there are others who seem to be in no hurry to sell. They reason that the land costs them nothing apart from the taxes which they pay on it and that every year adds to its value.

One man living in Kingsclear is said to estimate that he has two million feet of standing timber on his farm in addition to a large quantity of pulp wood and thousands of cords of hardwood suitable for fuel. He has received several tempting offers for the lumber, but is in no hurry to dispose of it. A resident of Douglas estimates that he has a million feet of merchantable logs on his land and he plans to cut it next winter and haul it to the river. A number of other farmers have carefully conserved their lumber lands and stand to make a good thing out of it. A million feet of standing time on a St. John River farm these days is estimated to be worth anywhere from \$12,000 to \$15,000.

An Untapped Energy —ALWAYS READY—

Superiority of design, construction and dependable service has been proven by many of the largest Canadian manufacturers in comparative tests. Such evidence is conclusive.

National Trucks have stood up under the strain of hard usage with a reserve strength, an untapped energy and an extra power which few motor trucks can equal.

For dependable performance under all conditions National Motor Trucks acknowledge no superior.

Built in six models—1 ton, 1½ ton, 2 ton, 3½ ton, 5 ton trucks and 6 ton tractor. Bodies to suit your individual needs. Beautifully illustrated catalogue upon request.

For Economy and Convenience

The question of what milk to use in a lumber camp is largely one of transportation and storage. Fresh liquid milk is, therefore, entirely impossible. One must look for a form of milk which, while retaining its natural flavor and full food value, is reduced in bulk and weight and has greater keeping qualities than liquid milk. This milk must of course be low in price and purchasable in large quantities.

Klim is the solution of the lumber camp's milk difficulties.

It is fresh separated milk, pasteurized, and reduced to a fine powder. It contains all the food elements of separated milk in their natural state, perfectly soluble in water. It is convenient because the exact quantity desired can be used without endangering the keeping qualities of the powder left in the tin. The natural flavor of the fresh

separated milk remains unchanged in Klim.

Klim bulks smaller and weighs less than any other form of milk. It can be shipped anywhere in any climate **by freight** and requires no refrigeration or special storage **because it is dry** and will keep indefinitely. A whole season's supply can be shipped in at one time. Klim is most economical—it costs less and there is no waste.

Klim, when whipped into water, becomes again fresh, natural-flavored separated milk and can be used as such in soups, gravies, bread, biscuits, pies, cakes, tea, coffee, cocoa and other foods and drinks.

Klim is sold by all wholesale grocers and supply houses in 10-lb. tins, 6 tins to a case—each tin makes 40 quarts. Order with your grocery supplies.

Ash, black, log run	25 00	

"The
Original
Red
Belt"

"The
Long-Grain
Friction
Belt"

¶ Dunlop "Gibraltar RedSpecial" is the proven benefactor of many an industry in this country which has felt the need of offsetting rising costs by speeding up production and by the elimination of belt trouble.

¶ "Gibraltar RedSpecial" is a real rubber belt. It may be compared to other brands of belts only as a powerful magnifying glass might be compared with the object whose imperfections it brings into the limelight.

¶ The first belts of this brand sold have been in use for years and have proven that scientific research—combined with approximately one quarter of a century's experience in the rubber goods manufacturing industry—could offer no more in belt merits than those features for which this Dunlop Product is so well and favourably known.

¶ We believe Dunlop "Gibraltar RedSpecial" cannot be made better. It is a red, frictioned-surface belt, constructed of the highest grade rubber, and specially-woven duck of tremendous tensile strength. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

¶ Provision has been made in "Gibraltar RedSpecial" against drying out and rotting. The richness of the rubber—compounded to retain its pliability indefinitely—waterproofs the duck as well as holds the plies securely together. It also serves to minimize internal chafing due to the constant bending of the belt. All unnecessary stretch is taken out in the manufacturing process.

¶ You will find Dunlop "Gibraltar RedSpecial" Frictioned-Surface Belting doing daily duty the year round in Pulp and Paper Mills, Iron Foundries, Steel and Rolling Mills, Saw and Lumber Mills, Mines, etc., in a truly efficient manner.

¶ We also specialize on Conveyor and Elevator Belts to meet every need.

The Dunlop Unreserved Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where "Gibraltar RedSpecial" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

QUALITY ROOFING

We put British Columbia Red Cedar Shingles (trademarked) up against any roofing product in the world for all-round satisfaction.

Our shingles are made from Red Cedar grown on the Pacific Coast slopes of British Columbia—a section where natural conditions develop Red Cedar to a state of perfection which is unexcelled in any other part of the world.

Our mills are operated with the most modern type of machinery and provided with every known equipment for the turning out of shingles of quality which will meet every condition demanded for roofing.

The grading rules under which our shingles are manufactured are of such a nature as guarantees the consumer a product which marks the highest standard of manufacture known in the shingle world.

We supply you with "dealer literature" such as your customers want—booklets that tell them facts about roofing—just the things they want to know.

Free on request—Send for a package to-day

Another reason Why HUTHER DADO HEADS are better

A Huther Dado Head is designed to facilitate intricate cutting. Contractors and wood workers now using it are enthusiastic over the seemingly difficult work it enables them to do.

It will fit any saw mandrel or rig and requires but little power to operate.

Illustration shows corner joint made with Huther Dado in two operations.

Send for one on approval. May be returned at our expense if unsatisfactory.

Does Labor Saving Machinery Pay ?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving

effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

You will readily see that it would not take long to pay for the cost of the machinery from the savings effected in the cheaper handling of the logs.

Our Booklet "Suggestions for the Lumberman," tells a number of up-to-date methods of using this labor-saving machinery for moving logs. You may have a copy for the asking if you have not one already. Just drop us a card.

Three Destroyed One Roof Escaped

Here is a striking illustration and proof of the fire resisting qualities of Brantford Roofing. The picture tells the story. Read Mr. Offer's letter confirming it. He says:

"I covered the roof of 201 Marlborough Ave., Toronto, with your Asphalt Slates some time ago. This house is one of a row of four, the remaining three were covered with Cedar Shingles.

"These houses were close to a railway track, and on the night of August 15th, 1918, these roofs caught fire from a spark from a passing train.

"As you can see in the picture the roofs on the houses were completely burned through, including the

sheeting boards and rafters. The boards and rafters on 201 were also burned through, so that the fire passed over and under your slates without harming them in any way.

"I have rebuilt the roofs and covered them with your Asphalt Slates since. I have had such good proof that if the four roofs had been covered with your slates no fire would have occurred."

This is only one instance where Brantford Roofing has stood the fire test. We have many such letters, all of which speak highly of its safety and reliability. The roof that is being used more and more throughout Canada is

Brantford Asphalt Slates

Brantford Asphalt Slates are used on the better class of buildings, on churches and houses, on any slanting roof where a permanent artistic covering is desired.

This roofing is also made in rolls and sold as Brantford Crystal Roofing—the best roof for a good barn, and will last as long as the walls themselves.

This is one of the best lines of roofing on the market, and offers big returns and increased business to the lumber dealer. He can easily sell Brantford Asphalt Slates or Brantford Crystal Roofing at the same time he sells the lumber for the building. Let us send you samples and prices.

The Old Timers' Favorite

Yates No. 108 Moulder

THE popularity of this machine is shown by the fact that one or more "108s" are to be found in over 1,500 mills and factories in North America.

It is the favorite of practical men whose experience enable them to compare the accessibility and sturdiness of the No. 108 with other machines designed for the same purpose.

This machine combines the sturdiness of an inside moulder with the accessibility of an outside moulder. All adjustments are placed in the most convenient positions. The jointing devices, one of which is shown above, make a fine finish possible by keeping the knives sharp and each doing its share.

Our new eight-page illustrated circular on the No. 108 will be sent free on request.

Write for it today.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Ideas and Suggestions for Interior Trim

Read the series of Illustrated articles on the above subject by W. H. Shaw now running in the Canadian Woodworker. Subscription price of this publication, 100 pages monthly, One Dollar a year.

Order from

Woodworker Publishing Co., Limited
345 Adelaide St. West, TORONTO

Do you know that the centrifugal force in belts at high speed, reduces their driving power until at about 9600 F. P. M. a belt is incapable of transmitting power? All such factors are taken into account by our Engineering Department when they design standardized belt drives. Consult them about your problem.

This is a 12 inch Spartan Double Belt, operating a 50 horse power Gas Compressor. Its cost to date is 1/2c per horse power per week. When this belt had been in use 18 months, the engineer wrote us that it had given double the length of service of belt previously used. This has now been in use over four years and is still going strong.

TOP NOTCH

This is another case where top-notch efficiency and economy have been obtained by simply installing the right belt for the work to be done.

For many years Spartan Belting has been dominating the hard drives that destroy other belts. That experience ranks it as top notch in leather, in tannage and in workmanship. It is unusually pliable, wonderfully elastic, it is the greatest of pulley grippers and without an equal for high speed, overload drives or where unfavorable conditions exist.

Spartan well exemplifies the three principles back of Graton & Knight Standardized Series Leather Belts: First, they are made of the right material—leather. Second, they are tanned in our own tannery specifically for belting use, thus assuring the right kind of leather. Third, they are graded into a Standardized Series—a belt for each class of power transmission requirements—standardized in manufacture and standardized for the work to be done.

Manufacturing All Kinds of Special Shapes in Refractories

Remember, we are making all our own blocks and making a specialty of special shapes.

We are using a high grade fire clay, which is the factor of supreme importance in all processes of manufacture. Our burners are experts. When you are in the market be sure and write us as we know you will find our proposition interesting.

Our stoker arches are designed to promote combustion and give longer life.

Our door arches and jambs are made to withstand the

strong-armed boy with the slice bar.

Our side wall blocks are made to eliminate the many joints that clinkers stick to, when ordinary fire brick is used. They give longer life and reduce air leaks to a minimum.

We designed these arches and blocks so that any handy man could replace same in half the time that it takes to repair a standard fire brick job.

Remember, Gates' blocks means cutting your cost of upkeep and fuel bills.

High Temperature Fire Clay for Emergency Repairs.

We specialize in all kinds of POWER PLANT BRICK WORK

"ABOVE ALL THE OTHERS"

That's what one user says about his Proctor Dryer compared with three other machines he operates. Another customer after an experience of five years with his Proctor Dryer writes "The working of this machine has been entirely satisfactory. It has cost us practically nothing for repairs." "Your Proctor Dryer has dried twice as much per day as the machine that we discarded," is the report from another user.

PORT HOPE - ONTARIO

Portable Saw Mill Machinery

Many large lumbering concerns are installing Portable Saw Mills to work up isolated tracts of timber.

The various features of Long's Portable Saw Mill Machinery appeal to the experienced mill man for this purpose. They are built to stand service, and are the result of long experience with this class of machinery.

Take the Mill to the Timber

We have a splendid new catalog illustrating Portable Saw Mills. May we send it?

A. R. Williams Machinery Co., Ltd., Winnipeg.

Williams & Wilson, Ltd., Montreal.

PERFORMANCE

PERFORMANCE is what really shows the true worth of any machine. In February 1916 England appealed to Canada for help in producing timber for war needs.

That Canada's response took a practical form is evidenced by the fact that in April the first draft of the Canadian Forestry Corps landed in England, and in May two more drafts fully equipped with WATEROUS Machinery followed.

This Machinery, designed and built to cut from 15,000 to 20,000 ft. per day, has turned out as much as 58,000 ft. in 10 hours.

A Waterous Outfit in the Jura Mountains, France

That this is not an isolated case, or the record of one mill, is shown by the many letters we have received from different parts of England and France, of which the following is an extract

"....I have many WATEROUS mills running under me, each mill designed to fit into a different location, but all doing equally good work.

"I have no complaint to make of the WATEROUS Mills, in fact, I prefer them to anything I have been able to secure up to the present time, and I have many different kinds of machinery with which to do our work.

"To illustrate: I believe all records of the Forestry Corps, either in England or France, rest with ourselves in the Jura; one of our Company's output a few days ago was 51,300 ft. for one shift of 10 hours, cutting 3 x 9 plank. A mill of this kind that can put over a cut like the above I believe you can look upon as a fairly successful outfit. To sum up, with the Waterous machinery that I have running in the Jura I feel confident that I can out cut any combination that is now running in the Forestry Corps. . . ."

What we have done for the Forestry Corps we can do for you.

Waterous

BRANTFORD, ONTARIO, CANADA

REFUSE BURNERS

We can handle to good, quick advantage your order for Refuse Burners, Tanks, Smoke Stacks or any kind of Steel Plate Work.

Need any grey iron castings? Come to us for them—up to 15 tons. We make Boilers—all sizes for all duties. Just one quality—the *BEST*.

Engineering & Machine Works of Canada, Limited, St. Catharines, Ont.

Eastern Sales Office: Hall Machinery Co., Sherbrooke, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

BLAZING THE TRAIL

QUALITY & SERVICE

We have been blazing the trail into the Good-will of the lumber trade by shipping high quality lumber, well manufactured, properly graded, and reasonably priced.

We will endeavor to hold your Good-will, and your trade by giving better service, if we can, than we have in the past.

If you are not now a customer of ours we want your next order to show what we can do. We feel satisfied you will like our lumber and our methods of doing business.

Orillia, Ontario

We Specialize in

one of the most important Departments of the Wholesale Lumber business.

Transit Milling

Very few saw mills and fewer wholesale lumbermen have their own planing mill.

For our customers' convenience and profit we have at Ottawa the best planing mill machinery that money can buy, and

We Do Good Work

Our prices are reasonable and our service prompt and efficient. We attend to car billing and take out Customs papers for shipments to United States points.

Our Superintendent gives personal attention to all work and we can guarantee satisfaction.

Should any lumber be required to complete carloads or to fill mixed cars, we have at Ottawa a stock of Pine, Spruce and Hemlock lumber on which we are always pleased to quote prices.

Milling price lists mailed on application.

PULP & LUMBER CO.

QUEBEC

A Trade Mark That Will Clinch The Sale

IN all our national advertising we bear down upon two things: First, Long-Bell lumber is lumber of distinctive quality. Second, Long-Bell lumber is trade marked.

A third point for lumber dealers to consider is this: Long-Bell lumber is nationally advertised IN BEHALF OF EVERY LUMBERMAN WHO DEALS IN LONG-BELL PRODUCTS. We are going right into your trade territory and pointing the consumer's way to your yard. We are building up in the public mind a demand for Long-Bell trade marked lumber. The dealer who can point to that trade mark when a customer calls has a big advantage over the dealer who cannot. In a word—it clinches the sale!

Milburn Acetylene Portable Lights for Logging Camps

No. 12
12,000 Candlepower.
Total Height, 6' 6"
Diameter, 12" x 12"
Weight Empty, 85 lbs.
Weight Packed for Ship-
ment, 112 lbs.
Carbide Charge, 12 lbs.
Burning Capacity, 12
hours.
Operating Cost, 4½¢
per hour.

FOR night illumination there is nothing to equal the brilliancy of Milburn Acetylene Portable Lights. They make the night as bright as day.

They are ideal for lumber camps. Strong, sturdy and simple, they can be operated by the most ignorant husky in camp. For the job that has to be done on the minute—no matter how black the night—you will find Milburn Lights indispensable.

They range in size from small 11" No. 22 light, which gives 100 candlepower, to the large industrial lights, like the No. 12, which gives 12,000 or 12 Duplex, twice as powerful.

The cost of operation is very small, varying with the size and power of the light. The No. 22 operates 8 hours on one pound of carbide, at a cost of 1½¢ an hour. The No. 12 burns for 12 hours on a twelve pound charge, at a cost of 4½¢ an hour. Think of that! A strong white light, 12,000 candlepower, for only 4½¢ an hour. All Milburn lights burn ordinary lump carbide, the cheapest form in which carbide is sold, and which can be purchased anywhere.

Write for booklet No. 248, which describes the lights in detail

Milburn Oxy-Acetylene Apparatus

For metal welding and cutting, Milburn Oxy-Acetylene apparatus is best in camp or mill work. It is reliable and trouble-proof.

Our type J torch actually welds on equal pressures of oxygen and acetylene. On heavy welding the amount of oxygen needed is only half that demanded by ordinary torches. This saving of oxygen amounts to a considerable item during the period of a year.

Our type N. I. torch is a combination cutter and welder. It changes from a welding torch to a cutting torch by a simple change of tips. It is not necessary to change hoses or to make any other adjustments. Merely change the tip and press the oxygen thumb-button. This thumb-button is equipped with an automatic catch which holds the button down giving a constant flow of cutting oxygen if desired. Trip the catch and the oxygen is cut off immediately.

These torches are strong and sturdy. They are made with solid bronze castings of unusual density and have other features to withstand the roughest usage. Write for booklet No. 348.

For a Long Pull, a Strong Pull, Use Griffith Giant Rope Traces

On the long, hard pulls of lumbering work where horses strain every muscle and harness is put to the severest test, Giant Rope Traces give continuous satisfactory service. They have stood up under the heaviest of Farm, Teaming and Lumbering work, have stood rough hard use and constant strain, and in every case have been "GIANT" in fact as well as in name.

Giant Rope Traces are particularly adapted to the work in the woods and lumber camp. The sharpest twigs and stumps in the bush cannot scratch, gouge nor cut them up like leather traces, and scraping against rough bark will not roughen and tatter their surface. Giant Rope Traces

DO THE WORK AND SAVE MONEY

Their sturdy strength can be relied on for any job in the woods or camp that horses can pull. They will give you longer, better service and at less than one-third the cost of all leather traces.

The heavy weight traces, made from 1 inch Manilla Rope, retail at \$6.50 the set.

Toronto, - Ontario, Canada

No Camp is Complete Without

Carbic Light

To the Lumbermen of Canada

YOU need light around the mill or in the logging camp at some time or other. Light that is good at all times, never-failing, always ready and safe.

In the CARBIC LIGHT all these are present. You need not be afraid of the CARBIC going out of commission as there are no intricate parts to worry you. Nothing dangerous, and nothing in the recharging that any unskilled laborer can not take care of.

You get better than 3000 candle power of pure white light for a very small cost, steady service, a light that will be in use for years with the proper care and handling. What more can be expected?

Read the Fine Points Concerning this Light

- 1—Candlepower remains constantly uniform. No diminution in brilliancy. The same degree of light to within the last 15 minutes of a full charge. YOU GET all the light you pay for all the time from Carbic—because
 - 2—Gas pressure stays constantly uniform. No soot, no smoke.
 - 3—Absolute simplicity. Only three substantial hollow parts which cannot be assembled wrong.
 - 4—Ignorant labor can't waste Carbic Cake in charging, recharging or cleaning.
 - 5—Simple charging. Just drop Carbic Cakes into Cake Holder, slip holder into gas bell and lower bell into water tank.
 - 6—No gas freed until you turn the valve. Over generation impossible.
 - 7—Simple recharging. Just add Carbic Cakes and water.
 - 8—Simple cleaning. Remove bell and cake holder. Slop water around in water tank and dump. This removes sludge.
 - 9—Economy in Carbic. Any unused piece of Carbic Cake has been only momentarily touched by water on under side. Remove it from holder and save for re-use.
 - 10—Safety. Kick over a Carbic, lighted. It goes out instantly.
 - 11—Big stocks of Carbic Cake always on hand (at a uniform price) for quick delivery anywhere.
 - 12—Service. A Carbic Service Man at your command to advise on lighting your job most efficiently.
- A no-cost-to-you- try-out of Carbic Lights under practical conditions on your own job is our proposition. This is what sells Carbic to cost-counting lumbermen.

CARBIC FLARE LIGHTS are in use all over Canada for Construction Work, Mill Work, Unloading Liners, Repair Work, etc.

Let the CARBIC LIGHT prove its worth at our expense. As many lights as required for a thorough test are ready to be shipped to your work—ABSOLUTELY FREE of all costs. This means we pay express or freight charges and ship CARBIC CAKES sufficient for the trial. Catalogues to those interested.

To the Lumbermen of Canada

AT a time like the present, when lumber activities are intensified to meet huge demands in the urgent reconstruction of Europe as well as for domestic needs, consideration has to be given to every means of improving conditions in the lumber camp. Serviceable equipment for the men is an important factor in satisfactory working conditions.

In addition to those engaged in the lumber work during the war are thousands of men returning from the army to the lumber field, and these men will require encouragement by the best provision for their future work.

Like many other big organizations, the firm of A. R. Clarke & Company were handicapped through the last four years by a large proportion of their staff serving their country. But it was realized that men and money were needed for the Empire's defence, and therefore, their employees were encouraged in the support of every means that contributed to the one end—VICTORY.

We are now back to full capacity, prepared in every way to meet the demands of present conditions. As to the quality and utility of our products, we believe they are so well known that special emphasis here is hardly needed. With our extensive facilities for the production of every article of clothing needed in the lumber camp and our determination to maintain the high standard by which our goods have always been recognized, we ask your enquiries for the equipment of your men.

We assure you your enquiries will receive every consideration and our best attention.

FOR BETTER CAMP CONDITIONS BUY

McClary's CAMP STOVES

They will give continual satisfaction, stand the hard grind of the severe camp conditions, and during the "Off" season will "lay up" without deteriorating. They're built to last, of sturdy hard wearing durable materials that resist heat indefinitely. Their construction is more than heavy, it is massive, and will thus withstand an exceptional amount of rough usage.

McClary's Algoma Range has a solid cast-iron Top built up on a strong steel body. The oven is big. It will meet the requirements of a large number of men, without strain. The "Algoma" can be supplied with a flush or elevated reservoir, either of which will hold an exceptionally large quantity of water for instant use.

The "Algoma" is a large capacity range for use under any climatic conditions.

McClary's "Camp Comfort" Stove, is all that its name implies. It is constructed specially for camps and heavy usage. The body is all in one piece of heavy sheet steel, with a weighty cast front and stamped steel back end. Entire length of the stove is available for use and with such a large firebox, large pieces of wood can be used. Shelves are supplied as illustrated or can be placed on top of range if desired. The legs are of heavy cast iron and set in extra strong cleats holding the body rigidly. An ideal range for meeting the requirements of large bodies of men.

Full information will be supplied on application to our nearest Branch.

Keep your men on the job

Times without number "better grub" has proved the sole excuse for a good lumber-jack changing camps. When you're right in the midst of cutting operations and looking forward to a big season, it is not only disheartening but highly unprofitable to have a good gang broken up because the grub is not as good as at the next camp.

Klim (powdered separated milk) is one of the most effective helps towards keeping men on the job. Klim has the natural flavor of the fresh, separated milk from which it is made, and im-

parts that delicious taste to all cooked and baked foods in which it is used. Soups, gravies, puddings, bread and pie fillings, tea, coffee, and cocoa, and numerous other staple articles of diet can be given an altogether different "homey" taste by the addition of Klim. With these natural separated milk solids in the larder your cooks can put up meals that will be the envy of every other camp in the neighborhood. You'll have the "travellers" coming to you instead of leaving your camp.

There is no other way in which you can get "The Flavor Nature Gave" into your camp. There is no other form of milk that bulks so small and weighs so little. There is none as convenient or as economical. There is none that will keep fresh and sweet as long in any climate. Klim is positively ideal for camp and boarding house use.

Get Klim where you get your grocery supplies. It comes in ten-pound blue-and-white-striped tins. Also packed in one-pound tin for household use. Order sufficient for the whole season, it will keep.

ENTERPRISE CAMP RANGES AND HEATERS

All Kinds of Stoves for Large or Small Camps

Our stoves are specially designed to meet all requirements of Camp work.

THE ENTERPRISE CAMPER

as illustrated, is a large, heavy, strongly built Steel Range, made for use in Lumber, Mining and Railroad Construction Camps, Boarding Houses, etc. It is made in two sizes with large 24" or 30" ovens, and the firebox will take a stick 31" long. The top cooking surface is large. It is a splendid water heater and can be fitted with either a 15 gallon detachable copper reservoir or a waterfront.

DAVIDSON'S

The "Premier" of Camp Ranges

It embraces every modern improvement and convenience that can be of practical use or advantage in a range

The Body is made of extra heavy, specially prepared steel, 14 and 16 gauge. It is hand rivetted throughout with cone headed rivets.

The Oven is very large. Baking for fifty men can easily be done with this range. The oven bottom is made of extra heavy flat steel, and is stayed with angle iron, so that buckling or warping is impossible. The fire box is large and roomy, and the fire box door, being extra large, rough coarse wood can be used with ease.

The Reservoir is made of planished copper, and being set next to fire box, a good supply of hot water is ready soon after firing up.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Toronto, September 1, 1919

No. 17

The Coming Days in the Lumber Field

This issue constitutes the Annual Camp and Supply Number of the "Canada Lumberman," and contains many features that should prove both interesting and helpful in all the numerous activities of the industry. Various phases of the logging situation, the amount of timber that will be taken off, operating expenses, management of men and camp administration generally are dealt with and discussed by representative lumbermen.

An effort has been made to present in instructive form, for the enlightenment of those firms who do not carry on bush operations, the progress that has been made in the way of efficient camp life and conveniences, and to show, in a convincing manner, that logging today is conducted under more sanitary, pleasant and comfortable surroundings than at any previous period.

There has been advancement all along in the lumber trade, and today quality, economy and production are the watchwords. In the opinion of those who have given close study to production problems it will take some years before enough lumber can be sawn to answer adequately all the at home and abroad requirements. An effort will be made this year to speed up production, and, in some instances, to double the cut of last season. Even should this desideratum be realized, there will still be a shortage in many avenues. The active building campaigns, the extensive character of repairs, the many new industrial undertakings and activity in the purchase of furniture, automobiles, phonographs, player-pianos and kindred lines will consume various kinds of woods at a more rapid rate than the manufacturers in this country can supply.

Then, export has only been begun. It will not attain its full status and development until next year, when the reconstruction of Europe will be under full sway. So long as Canada becomes more and more an exporting people instead of an importing one, will industry in all fields continue to grow. The balance of trade is at present very materially against the Dominion, and, if through its ship-

building campaign, its tariff boards, a way commission, or other bodies, the federal government can render any stimulus and facilitate the means of export, a real national service will have been accomplished. The necessary tonnage to handle export trade should be speedily supplied.

There is now a great opportunity for the Dominion to reach out and come to its own in preeminence of commercial nationhood. The stream of prosperity has its source in the bush, and, through all the ramifications of the industry until the delivery of the finished cargo, there should be aggressiveness, co-operation and harmony. It is felt that Canada can now do much to place herself in the forefront of world-wide mercantile affairs by undertaking in a distinctly businesslike manner and with whole-hearted energy the work of developing foreign connections and retaining these through well established service, superiority of products and the abundance of materials at our command. In the lumber and woodworking branches there should be a "long pull, a strong pull and a pull altogether."

A Criticism and the Answer

In a recent issue of the "Quebec Telegraph" there appeared an interview with a "prominent local timber merchant," alleging discrimination against the port of Quebec in favor of Montreal by the Eastern representatives of the British Government Timber Buyer, in connection with the shipment of the lumber purchased on that Government's account. Quebec is, very properly, jealous in retaining every pound of traffic to which she believes the port is entitled, and naturally does not like to see business diverted to Montreal or elsewhere. Lumber is an important item in the port's trade, and the fact that several of the largest exporters to the United Kingdom have their headquarters in Quebec is significant of the standing of the port in the matter of this section of Canada's overseas business.

The allegation of the "prominent local timber merchant" is that the Montreal shipping companies are exercising an influence not only to the detriment of the port of Quebec, but to the detriment of Imperial interests. Further, it is asserted that lumber can be shipped as cheaply, if not cheaper, than via Montreal. It is argued that if the British Government Timber Buyer's representatives insist on loading deals at Montreal, they ought to take on deck loads of square timber at Quebec. The first need for construction in France and Belgium, it is said, is square timber for the building of foundations, and later the shipment of deals. But the advice given by the Quebec lumberman was, he asserts, ignored, as the British officials "would simply place themselves, as they have been doing all along since the outbreak of the war, in the power of their Montreal advisers without taking the trouble to learn the cost."

"The result is, in a majority of cases, the lumber and deals are being first shipped to European ports for construction and the square timber most needed for the beginning of foundation work left to follow, just like the shipment of the cart before the horse. But this is not the only disadvantage. Millions of feet of lumber and deals manufactured in the district of Quebec and purchased by the Imperial Ministry, is being transported by rail from here to Montreal and thence loaded on board the ships, an extra cost in handling and railway transportation that must be enormous, and still the agents sent over from England to supervise these shipments and protect the interests of those who employ them in cost, are influenced by the Montreal shipping agents to the detriment of honest competition and the port of Quebec.

"Every day it occurs that square timber that should be shipped out of Quebec is being transported from this port to Montreal for shipment on the European steamers, which is not only an extra expense in handling, but in railway freight. It is like going to London for merchandise and placing it on sale in Canada for the British public to come over and purchase, and this thing has been going on for some time and still the British officials sent over here to supervise the shipments of square timber and sawn lumber are either blind or too dense in intellect to realize conditions."

The assertion that the British Government Timber Buyer's representatives are under the influence of the Montreal steamship com-

panies is, we are informed, absolutely incorrect, and in that connection it must not be overlooked that the allotment of space for government cargo on "Liner Steamships," including lumber, is under control of the British Ministry of Shipping, with offices in the Shaughnessy Building, McGill Street, Montreal.

All the regular liner cargo vessels that can be accommodated at Quebec are stopped at that port outward bound to load their lumber allotments, and, therefore, the allegation that millions of feet of lumber manufactured in the Quebec district is being transported by rail to Montreal at heavy additional expense for loading on steamships at that port is without foundation, and as a matter of fact the maximum quantity of lumber which can be shipped is being loaded on steamers at the port of Quebec.

In addition to the large number of liner cargo vessels which are loading lumber at Quebec regularly each week, about a dozen vessels specially chartered by the British Government Timber Buyer have loaded complete cargoes of lumber at Quebec during the months of July and August, and the shipment of lumber direct from that port will continue without intermission until all the contracts have been completed.

The statement that spruce lumber is being shipped overseas in preference to waney pine timber required in the construction of buildings is not, we understand, in accordance with facts, as all such timber now being shipped from Quebec is used almost exclusively for shipbuilding purposes.

Beautiful But Costly Ideals

Government operation and control of railways in the United States has been anything but a signal success. The mania for public ownership which swept the land, so far as the transportation facilities were concerned, found early accomplishment when "Uncle Sam" entered the war. Enthusiastic advocates came out with long articles praising the foresight, wisdom and initiative of the powers that prevail on the banks of the Patomac.

Now national control of the railways is like the leprosy—no cure. The authorities at Washington would shake off the incubus if they could and hand the roads back to the original owners. The deficits have amounted to millions and millions of dollars. Railway employees have been clamoring for more money until an office boy, a flagman or a stenographer now receives practically as much as did an engineer, station-master or conductor before the war. It has been stated that there are watchmen at crossings where only five or six trains a day pass, drawing \$150 per month. Who is footing the bill for all this inflated and abnormal economic creation whereby a messenger now commands the salary of a former bank manager? Why, it is the people, and they are paying for it doubly, not only in increased freight and passenger rates, but also by direct taxation. Labor has become more and more insistent. It wants to reap all the sweets and partake of naught of the bitter.

Recently the plumb plan for ownership and operation of railways was proposed. It did not by any means score a bull's eye. The railway employees who advocated it were not willing to take any chances. They wanted their share of the dividends if there was a profit resulting from the operation of the roads, but if there was a deficit they desired the shortage to be made up by taxation. In other words, they were not willing to take a "sporting chance." They were eager to gamble on a "sure thing," which is not creditable to their spirit of justice and fair play. If government operation continues it looks as if there will be a permanent deficit, and hence taxation must be resorted to to make up the difference.

Rates on the United States carrying lines were increased twice during 1918 and it was thought at that time that sky-line had been reached, but there is an altitude higher yet, for it is learned that Walter D. Hines, director general of the United States railway administration, has in contemplation another advance in freight rates. As soon as such a move is made on the other side a similar shift will be pulled off in Canada, as there seems to be a remarkably sympathetic and reciprocal bond of union between the transportation companies when it comes to augmenting either freight or passenger fees.

The National Wholesale Lumber Dealers' Association has sent

out through its traffic manager, notices to the members. Messrs. W. G. Power, of St. Pacome, Que., and Gordon C. Edwards, of Ottawa, are trustees of the National Wholesale Lumber Dealers' Association, and the announcement by that body has a direct appeal to Canada, the same as it has across the border. In this notice the situation is summed up succinctly by the association as follows:—Notwithstanding the increased tonnage expected from heavy crop movements and other sources, it is evident that the revenues to be derived therefrom will not be sufficient to offset the heavy increases in operating expenses. Apparently the only way in which another advance could be avoided would be by having Congress make further appropriations to the Railroad Revolving Fund. Are you in favor of a further advance in freight rates at this time? If so, how much, in your opinion, should the rates be advanced and what form should this advance take, i.e., should it be on a percentage basis or a flat increase? You will recollect that General Order No. 28, effective June 25, 1918, provided for a 25 per cent. advance, with a maximum advance of 5c in the commodity rates on lumber and forest products. In your opinion, should a further advance apply to all commodities, including lumber and forest products, or do you consider that lumber and forest products at present contribute more than their share to the transportation revenues of the railroads? From the broad view of quickly rehabilitating our country from the war basis will an increase in freight rates on lumber be another deterrent in our house building program?

It certainly does not look as if the price of lumber is going to recede when one considers the increased cost of living, the excessive wages, the shortened hours, the exactions of labor, augmented carrying charges, the outlet to Europe and the general active house-building campaign. Apparently the pendulum is swinging far in the direction of higher quotations on forest products.

Editorial Short Lengths

The housing problem, which is one of the most difficult with which Britain has to deal, is now being tackled by the government in earnest. Tenders have been called for the erection of 3,200 houses in London, costing in the aggregate £2,300,000 sterling.

The total annual freight bill of the United States lumber industry is estimated at about \$215,000,000. Lumber and forest products furnish about 11 per cent. of the total tonnage of the American railroads, or about 215,000,000 tons yearly, according to Interstate Commerce Commission statistics. This total is greater than the movement of all agricultural products and is exceeded only by the tonnage of general manufactures and mine products.

There is an agitation on in one of the great political parties of Canada to have lumber placed on the free list. The platform adopted declares emphatically for free trade or near free trade in sawmilling machinery as requisite to the fullest development of the forest resources. At the same time it demands that if the party is returned to power at the next election there must be abolition of tariffs against United States lumber in all degrees of manufacture.

At the convention Hon. John Oliver, premier of British Columbia, challenged the free trade planks on the ground that to specify free sawmilling machinery was patchy and foolish. Sawmilling, he pointed out, was only one operation in converting logs to finished products. Logging machinery, cables (donkey engines, locomotives, axes, saws, etc.), had quite as much right to be considered essential as the materials entering into a sawmill.

It has often been declared that free trade is the panacea of all economic ills. The query naturally arises at this particular juncture, would wood goods be any cheaper were all tariff bars let down and the circulation of lumber made as free as the air we breathe?

There will always be theorists, dreamers, faddists, visionaries and fanatics who want to try out everything and anything in the hope of realizing the economic dream of many a man. The dream is that it is his inalienable right to buy in the cheapest and sell in the dearest market. Respecting the best means how this belief or ideal can be accomplished, opinions and procedure will continue to differ until the dawn of the millenium.

Some Busy Sawmills on the Georgian Bay

Midland, Penetang, Victoria Harbor and Parry Sound all Have Progressive Plants

— Features of Various Units Recently Visited by Ontario Yardmen

Midland has for many years been one of the most important lumber manufacturing towns in the Georgian Bay District. Its natural location, splendid shipping facilities and convenience to timber limits have marked it out as one of the busiest operating centres, so far as wood products are concerned, in the province of Ontario.

The largest producing mill in Midland, as well as one of the most efficient, compact and well equipped, is that of Manley Chew. Many important additions and improvements were made a few years ago to the plant which is a most active one, operating night and day. The mill generally starts up as soon as the ice leaves the bay and runs right through to the first of December. Two gangs of men are employed, each working ten hours a day.

The present mill building is 65 x 125 ft. with cement boiler house 44 x 46 ft. which is designed in the most modern manner with boilers fitted with Dutch ovens and fed with self-feeders. The sawing equipment consists of two double-cutting band saws; two gang edgers; lath and picket machines and all the other accessories of an up-to-date sawmill. The present capacity of the plant is one-quarter million feet every 24 hours, or, more properly speaking, every day of two shifts of 10 hours each. The lumber cut is pine and hardwood, fully 80 to 90 per cent. of the product being white pine. The mill has a splendid yard capacity, containing piling-room for about 20,000,000 ft. with 5,000 ft. of track and lumber is shipped out both by rail and water. The motive power of the mill is steam and there is a sprinkler system of fire protection throughout the buildings and yards.

The mill was erected in 1899 by Geo. Chew & Son, the company being composed of the late Geo. Chew and his sons, A. G. Chew and Manley Chew. The latter has been the sole owner and manager for the past 18 years and is widely known throughout the industry for his business ability and aggressiveness. For some time Mr. Chew represented the riding of Simcoe in the Federal Parliament.

The dock for water shipment will hold about 5,000,000 ft. of lumber and 3,000,000 lath and has a depth of water from 14 to 30 ft.

Mr. Chew operates his own camps in the woods and this year will take out about the same quantity of timber as last. He makes a specialty of contract sawing and his mill is generally referred to as the "fastest operating one on the Georgian Bay."

In regard to the fire protection system, already referred to, it may be stated that there are four hydrants across the yard between the mill and where the lumber starts. Pipes are strung under the full length of each of the trams with four or five connections. At every connection throughout the yard and under the trams fire hose has been placed. By this efficient plan water can be directed against any outbreak of fire on any part of the yards within one minute.

The Plant of Chew Bros.

The mill of Chew Bros. is a well laid out and admirably managed one and is widely known throughout the whole of Ontario. The firm originally consisted of Geo. Chew (father of Manley Chew) and

his brother, Thos. Chew. They dissolved partnership some years ago and the partnership now consists of Edwin Letherby and Manley Chew, the former acting in the capacity of manager as the latter has extensive interests of his own which requires the greater part of his attention. Mr. Letherby has been with the firm since 1885 when he took a position as office boy and has steadily risen by industry, perseverance and devotion to duty. Not only is he well liked in the lumber arena but, by the citizens of Midland, Mr. Chew has been honored on more than one occasion in being elected to the position of Mayor.

F. C. Battick is the mill superintendent of Chew Bros. and Wm. Nicholas the yard superintendent, while Elgin Gilmour has charge of the office and Thomas Pickering is wood superintendent. The company operates its own camps and owns its own limits. The mill has a sawing capacity of 15,000,000 to 18,000,000 ft. of lumber annually; 6,000,000 pieces of lath and 2,000,000 pieces of pickets. The sawing season is generally from May to November.

The equipment of the mill consists of two double-cutting bands, a Wickes gang, Payette edger, lath and picket machines complete, together with all the smaller saws and essential equipment in connection with a modern mill. The principal timber sawn is white and red pine and the location of the mill gives it excellent facilities for shipment either by rail or water. The company has five private switches extending the full length of its lumber yards and also a dock for water shipments. Eight tramways extend throughout the yard for distribution and piling ground. The mill plant is equipped with an up-to-date automatic sprinkler system; the source of water supply is the town and there is a private 1,000 gallon capacity fire pump located near the mill, while 6 in. mains and hydrants are installed for yard protection. Some years ago the entire lumber yards of Chew Bros. were twice consumed by the flames but of late years although a blaze has broken out now and then the fire has, through the splendid protection afforded, been speedily extinguished without any heavy loss.

Enterprising Woodworking Industries

One of the cleanest, most progressive and ably administered woodworking plants is that of the Midland Wood Products Company, Limited, which was organized in 1917. The officers at present are—president, Jas. Playfair; vice-president, D. S. Pratt; secretary-treasurer, N. L. Playfair; manager, M. J. Bray.

The company manufacture doors, columns, sash and mouldings in pine and hardwood, etc., and carry a large stock of rough lumber suitable for building purposes. The company also turn out window and door screens and wood rolling partitions suitable for dividing class rooms and assembly halls, Sunday-school halls, etc. The factory of Midland Wood Products, Limited, is well laid out, well lighted and the equipment is installed with a view to utilizing the minimum of space and giving the maximum of output. The company

Panoramic view of the mill property of Chew Bros., Midland, Ont., taken from the elevator and showing the extensive yards of the firm

Well equipped sawmill of Chew Bros., Midland, Ont., showing log pond in the foreground

manufacture mouldings of all kinds to details and their designs show a most representative line for general building purposes, while among other products are stairs, newels, dowels, porch rails, etc.

Another busy industry in Midland is that of Midland Woodworkers, Limited, formerly the Georgian Bay Shook Mills. The company manufacture planing mill products and box shooks of all kinds and have a particularly large and well established plant. The "Canada Lumberman" hopes at a later date to be able to present some pictures and full details of the equipment of this well known organization.

Busy Plants in Penetanguishene

The neighboring town of Penetanguishene has several busy industries, not only in the lumber and woodworking line but in other branches as well. The town has first class shipping facilities and is a thriving centre with a happy and contented people and a go-ahead spirit, an aggressive Board of Trade being recently organized.

The C. Beck Mfg. Co., Limited, have very extensive mills in Penetanguishene and turn out lumber, lath and timber, as well as boxes, box shooks, wooden pails and tubs. The company also do milling, resawing and their products in the woodworking line are known as the "horseshoe brand." The plant originated under the late Chas. Beck in 1877 when he acquired the Penetang Saw Mill and added to it from time to time until it embraces two splendid sawmills, planing mill, box factory and wooden pail factory. The saw mill capacity is 130,000 ft. in 10 hours with an equipment of one circular and one Wickes gang; one double-cut band saw and a gang edger.

The company cut principally pine and have this year a small stock of spruce and hemlock. The C. Beck Mfg. Co., of which W. F. Beck is president, A. E. Beck, vice-president and treasurer and G. A. Beck, secretary, manufacture lath in connection with their saw mills and from one mill a record cut of 128,000 pieces in 10 hours was produced. The Toronto box trade of the firm is supplied from the com-

pany's factory at the foot of Parliament St. The sales of the Beck Lumber Co. are under the supervision of Frank H. Horning, who makes his headquarters in Toronto.

The McGibbon Lumber Co. specialize in hemlock, as well as in white pine and hardwood and the industry has been established a great many years. In fact, it was in 1865 that the business was founded by the late Chas. McGibbon, who passed away a few months ago. The mill is equipped with a circular saw and the cutting capacity

is 40,000 ft. per day, the product being white pine, hemlock, hardwood, lath and shingles.

The company was recently incorporated with a capital stock of \$100,000 and the following officers elected: President, Archie McGibbon; vice-president, Norman McGibbon; secretary, Finlay McGibbon; directors, the foregoing and John and D. D. McGibbon.

Gropp Bros. have been established in the lumber business in

Penetanguishene since 1900 and their establishment is known as the

Penetanguishene Lumber & Shingle Mills. The firm manufacture

rough and dressed lumber, pine and cedar shingles and are equipped

to cut lath with an up-to-date lath mill. The shipping of Gropp Bros.

is done principally by rail. The firm also manufacture crating and

have installed a plant for this purpose and operate a wood sawing machine to cut up slabs and mill refuse, which they ship in carload lots for stove wood.

An Electrically Operated Sawmill

W. J. Martin who is one of the firm of Martin Bros., Hillsdale, Ont., has a small but well equipped mill at one end of the town of Penetanguishene. His plant is operated by 100 h.p. electric motor and is one of the few electrically driven mills in the province. Mr. Martin has been in the lumber business a life time and also in the slack cooperage and planing mill business at Hillsdale. The firm also operated a lumber plant at Martin's Siding, Muskoka, under the name of Martin Lumber Company and established a post office and station at that place, which is a few miles south of Huntsville. The Martin Lumber Company disposed of their interests some years ago to Mr. Alex Prowdfoot. The plants at Hillsdale and Craighurst have not been running for the last three years and Mr. W. J. Martin, not wishing to get out of touch with the lumber business, came to Penetanguishene and bought 300 acres of virgin timber from Geo. E. Copeland.

This timber was acquired by Mr. Copeland's father from the British government some 60 years ago and had never changed hands until it fell into the possession of Mr. Martin at the beginning of 1918 when he started operations and took out a stock of logs to build a mill and camps on the property and put in railway sidings. The first stock was put through the mill during the summer of 1918. The bush consists mostly of hardwood and the mill is a circular one complete, and run, as already stated, by electric power with one 100 h.p. motor. Mr. Martin states that this drive is very satisfactory and is a great saving on fuel. The sawdust is shipped by carload and also all other mill refuse for which there is a ready market. The capacity of the mill is from 15,000 to 20,000 ft. per day. Mr. Martin

The attractive and well laid out plant of Midland Wood Products, Limited, Midland, Ont.

The P. Payette foundry and machine shop, Penetanguishene, Ont.

expects to have all the timber cut on his 300 acres in about two more years and will turn out between 3,000,000 and 4,000,000 ft. besides 6,000 or 8,000 cords of hardwood.

Widely Known Saw Mill Machinery Firm

The P. Payette Company, of Penetanguishene, are manufacturers of general sawmill machinery, lath mills and bolters, carriages and set works, log decking machinery, etc. The business was established by Peter Payette 34 years ago and J. T. Payette, the present proprietor, has served 21 years apprenticeship, learning his trade in each shop, such as the moulding, machine and pattern shops. Then entering the office he worked his way up until he became office manager and latterly took a position on the road. On the death of his uncle, Peter Payette, he became manager of the whole factory, which was left to himself and eight other heirs. Geo. E. Copeland and J. T. Payette purchased the interests of the other heirs and four years ago last spring Mr. Payette acquired Mr. Copeland's interests making the former sole proprietor of the plant. The capacity of the industry is now five times what it was five years ago. J. T. Payette purchased some three years ago the gas engine plant of the Adams Launch & Engine Co. and has more than doubled its output. The Payette Company have been doing a great deal of shipyard work and at present have about a year's work ahead of them. They made all the rudder posts for six Toronto ships and also for three Midland ships and turned out all the cast iron slabs for the Dominion Shipbuilding Co. of Toronto and the Midland Shipbuilding Co. of Midland.

Mr. J. T. Payette is only 33 years of age and has always taken a deep interest in good horses. He keeps a number of fast stepping animals and a couple of years ago purchased the town park from Penetanguishene and transformed it into one of the finest racing establishments in northern Ontario. The half-mile track is one of the best that could be desired.

Historic Plant at Victoria Harbor

The Victoria Harbor Lumber Co., Ltd., whose mills are located at Victoria Harbor and whose head-office is at 12 Wellington St. E., Toronto, is one of the historic industries on the Georgian Bay. The late John Waldie was the founder of the progressive enterprises of which his son F. N. Waldie is president, R. S. Waldie, vice-president and W. E. Harper, secretary. J. Duckworth is the manager of manufacture and G. E. Spragge, sales-manager.

The yards of the company are exceptionally well laid out, the

stock being neat and regularly piled. The means of distribution are two yard locomotives and several miles of track. One locomotive is used for hauling lumber, lath, slabs and edgings from the mill to the piling yard and the other is employed in the shipping yard for shunting cars and hauling lumber from the yard to the planing mill. The shipping facilities of the Victoria Harbor Lumber Co. are by either rail or boat and the sheltered position which the mill occupies affords excellent booming ground for logs.

No. 1 mill which was destroyed by fire in May, 1918, was erected in 1877 and remodelled in 1902. It was equipped with one single cutting band saw and was used entirely for sawing timbers and all kinds of bill stuff.

No. 2 mill, which is idle this season owing to the scarcity of logs, was built in 1870 by Kean & Fowlie and remodelled in 1902 by the present owners. It contains one double cut band saw, as well as a circular and a gang saw.

No. 3 mill is the newest one and was put up in 1900. It is equipped with two double cutting band saws, a gang and gang edger and

The electrically-driven sawmill and part of the lumber yard of W. J. Martin, Penetanguishene. Five months before this picture was taken the site was a solid bush.

is busy operating this season. The average daily cut is 125,000 ft. and 50,000 pieces of lath. The planing mill which was erected in 1887, contains two matchers, one double surfacer, one moulder, one re-saw, two rip saws and one siding machine. When the two sawmills of the Victoria Harbor Lumber Co. are in full operation the daily output is one-quarter million feet of lumber and 100,000 pieces of lath.

The Conger Lumber Co's. Activities

The Conger Lumber Co., Ltd., are manufacturers of pine and hemlock lumber, timber and lath, and their mill is located at Parry Sound, being one of the busy institutions of the north. W. B. Maclean is the president of the company, J. G. Maclean, secretary-treasurer and G. A. Maclean, manager of manufacture. The company was incorporated in 1884 and the original mill was equipped with a circular saw and a Wickes gang. This mill was destroyed by fire in April, 1901, but was rebuilt during the summer and is now equipped with two Waterous double-cutting band saws, together with edgers and a lath mill. The capacity of the plant is from 12,000,000 to 14,000,000 ft. annually. Owing to the scarcity of help and the impossibility of securing bush men to get out the usual quantity of logs, the cut will be rather small this year.

The Conger Lumber Co. was originally formed by W. H. Pratt, father-in-law of W. B. Maclean now president of the company. Mr. Pratt died in July 1905 and the industry has been carried on ever since under the able and progressive management of Mr. Maclean.

Rain Checks Menacing Fires in Ontario

The fierce forest fires which have been raging around Sault Ste. Marie, Ont., and other parts of northern and northwestern Ontario have, at last, been extinguished by recent heavy downpours of rain. The protracted dry spell in many sections added to the flame hazard and kept many communities on tenderhooks owing to the proximity of the flames. Word received from the Soo says, now that the smoke cloud is lifted, the damage that the fires have caused is clearly apparent. Miles upon miles of bush land have been reduced to a barren debris. Here and there a farm has been destroyed, but the damage in this respect was astonishingly small. No towns were hurt. There is scarcely a trace of wild-animal life within a fifty-mile radius, all the animals being driven to places of safety.

Settlers were working night and day in certain areas to save their house, as well as their fences and growing crops. In the vicinity of Deer Lake, 23 miles from Parry Sound, much damage was done.

W. J. Martin, of Penetang, Ont., standing beside a few pine logs, 45 of which made over 30,000 ft. of lumber. One tree alone contained 5,000 ft.

General view of the mills of the Victoria Harbor Lumber Company at Victoria Harbor, Ont.

Millions of feet of standing timber have been killed by the fires in Parry Sound region. This timber will have to be cut this winter in order to save the trees from the worms and rot which follow. Miles of fences were also consumed, as well as some firewood which had been cut and piled last winter. Forest fires in the north have been more numerous this year than at any period since 1916, when the great holocaust occurred. The damage, however, has not been nearly as great.

Careless Settlers Add to Danger

The Ontario Department has 1100 fire rangers scattered throughout the north country. These men can do much, but not everything, in safeguarding the wooded wealth of the various districts in which they labor. The Provincial Department of Lands, Forests and Mines declare that every precaution was taken this year, the same as in former ones, but the fires gained in numbers and strength owing to the long dry summer, rain not having fallen for weeks and weeks.

It is stated that some of the fires were started by settlers burning slash without first obtaining the necessary permit. E. J. Zavitz, the chief provincial forester of Ontario, in a recent interview, stated that the Department could control the fires in the towns and save lives, but was not able to control the fires on the big areas of bush when settlers and others, go out and burn slash, despite the rigid regulations. It is understood that a number of settlers have been convicted of this offense, but the fine is a comparatively light one. At the next session of the Ontario Legislature the Act will probably be amended, through the initiative of Hon. G. H. Fergus-

son, Minister of Lands, Forests and Mines. The penalty will be increased and the offence made punishable by a term of imprisonment.

Wireless Phones and Motor Patrols

It is interesting to note that wireless telephones and motor-boats will soon play an important part in the matter of protection from forest fires. The experiments will be tried with the telephone in the interior of Ontario, while the motor-boat patrols will be introduced in the Georgian Bay and Muskoka districts.

In discussing the frequency, extent and damage done by forest fires, a leading paper ably summed up the situation recently by stating:—

Canada is experiencing one of the most destructive forest fire seasons in many years. From British Columbia to Nova Scotia comes the same story of vast timber limits wiped out, and it is an unfortunate feature of the conflagrations that the timber destroyed was on land that is of no use for agricultural purposes. Thus the loss to the various provincial treasuries, as well as to private owners, is heavy and total. Forest fire protection has been greatly expanded of recent years, even to the extent of utilizing aeroplanes in some districts; but despite these precautions the fire fiend annually transforms rich timber resources into barrens, that for scores of years will be of no use to man. Few problems are so vital to the prosperity and progress of the nation as forest conservation. Much has been done to protect our timber from this devastating agency, but it is clear that efforts on a still greater scale will have to be developed if we are to secure the upper hand.

"Some Things That Our Association Has Done"

Benefits of Organization Are Shown in Almost Every Walk of Life But Nowhere More Thoroughly Than Among Retail Lumber Dealers of Ontario

By Thos. Patterson, Hamilton, Ont.

Thomas Patterson, Hamilton,
President of O. R. L. D. A.

The year that has passed since the publication of the 1918 Camp Number of the "Canada Lumberman" has been one of those great periods which will come to be known in history as an epoch. The termination of hostilities was one of its first events and from the day of the armistice in Europe dates everything that is constructive for the new era into which we have entered.

For the Ontario Retail Lumber Dealers' Association these months have been alive with interest and pregnant with import. Until the early autumn of 1918 the work of the Association had of necessity been devoted almost entirely to organization. The Association had to make itself known, to secure members and to map out its work during the first few months of its existence. That this work

was done to good effect is evidenced by the present healthy state of the membership, which amounts to 167, and by the interest which the members are taking in the progress of the Association.

There are two things which account for most of the success which the Association has experienced. First, is the necessity for the work it is doing, and second, is the progressiveness and breadth of vision of the men who have so readily devoted their time and thought to its welfare. The benefits of organization are being impressively shown in almost every walk of life to-day, but nowhere more thoroughly than among the retail lumber dealers of Ontario. The dealers realize fully the truth of the statement recently made by the President of the National Federation of Construction Industries of the United States who said:—"Conjecture as to the world's future throws ORGANIZATION into high relief. With vast accumulated stores of knowledge and experience, we are upon the threshold of a new era in which OUR INHERITANCE WILL BE BROUGHT TO FULL FRUITION THROUGH CO-OPERATION."

Some of the chief public events of the past few months, so far as the Ontario Retail Lumber Dealers' Association is concerned, have already been fully reported by the "Canada Lumberman." Our two meetings, the first special general convention in September, 1918, and our first annual meeting in February of this year, are now matters of history, well known to all the trade. Their great success was a matter for pride on the part of those who were instrumental in their carrying out.

The Individual Units Count

The work of the Ontario Retail Lumber Dealers' Association, however, is not a matter solely of big conventions. These are only the periodical, though very necessary, illustrations of the force that lies within such an organization. It is in the effective and daily activity of the Association that its claim to existence lies. No amount of cheering and entertainment at an annual meeting will hold together an Association of this nature. The individual members must feel that the Association is a benefit to them, and in order that this may be the case there must exist among the members a determination to work for the promotion of the general interest of the trade. Happily, this is one of the strong features of the membership of the Association.

There are two broad divisions of work which the Association is carrying on; educative and protective. An educative factor in the work of the Association is that which is afforded by the meetings held by local branches. In Ottawa the members hold meetings nearly every week throughout the year. Toronto members hold meetings frequently. Hamilton has been the centre for meetings of the Western District. London, Sarnia, Windsor, St. Thomas and Chatham dealers have held several meetings. Local branches have been formed at Orangeville and Stratford. A good meeting was held at Georgetown early this year. At all these meetings the programme is a wide one, covering an informal discussion of many matters that are of vital im-

portance to the trade. It is becoming increasingly evident from these meetings that only by such means can the members of the trade lift themselves out of the old rut of selfish individualism and get into the broad road of progressive co-operation, friendly respect and scientific business management, which are essential to success.

Some Big Propositions Weighed

Many matters were discussed at the annual meeting of the Association in February, and made the subjects of motions which outline a large field of work for the members. One of the most important was that which had to do with trade relations between wholesalers and retailers. The appointment of a special committee to deal with this matter was an important step. Conferences have been held between this committee and a similar committee of the wholesalers. While it has not been found practical or possible to draw up anything concrete in the nature of a definition of trade relations, important progress has been made in the direction of establishing greater mutual confidence and respect between the two branches of the trade. It has been amply demonstrated by these conferences that the Wholesale Lumber Dealers' Association, Inc., has the interests of the retail trade closely at heart and that the members of the Wholesale Association are doing all they can to promote the welfare of the retailers, both by campaigning for new members for the retail association and by adopting modern principles of trade ethics.

Trade ethics is a matter which has two sides to it. The retailers, realizing this and that they have a responsibility similar to that of the wholesalers have placed themselves on record in a strong resolution passed at the annual meeting in February which requires the directors to make a thorough investigation into any case in which a member is alleged to have cancelled orders on a falling market.

Among the most gratifying results which the Association has been able to obtain has been in connection with a large number of disputes between retailers and wholesalers or manufacturers about delay in shipment of stock, and sometimes about other matters which were making trouble. In this one direction alone we feel that the Ontario Retail Lumber Dealers' Association has justified its existence. These are invariably matters of a personal nature about which it would not do to make public statements, yet it can be said that in all cases, with only one exception, these difficulties have been overcome, and this one exception is still the subject of negotiations. Outstanding sources of trouble have been eliminated. Friendly relations have been restored. In short, while promoting the interests of our members in this direction it has been found possible to remove many causes of friction which formerly were permitted to remain.

Legislative Matters Requiring Attention

In the field of legislation there is much for the Ontario Retail Lumber Dealers' Association to watch. Several matters of importance have already received attention. The chief of these has had to do with the Mechanics' Lien Act of Ontario. Under the present Act, the retail lumber dealer and other material men, as well as the wage-earners, do not receive the protection to which they are entitled and which it was the intention of the framers of the Act that they should receive. Our Association brought this matter to the attention of the Ontario Government and has induced the Government to appoint a special committee of the Legislature for the purpose of hearing all parties who are interested in the passage of a new Act. It is expected that, upon the report of this committee, the Government will frame a new Act and have it passed at the next session. The Legislative Committee of our Association has devoted a great deal of time to this subject and has prepared its suggestions in definite shape for presentation before the Special Committee of the Legislature. The best possible legal talent has been retained by the Association for this purpose and the proposals which we desire to have laid before the committee will thus be presented in the most effective manner possible.

The Ontario Retail Lumber Dealers' Association may now be said to have amply demonstrated the wisdom of those who established it. It has secured a splendid start. Its membership is thoroughly representative of the best elements of the trade. There is room for considerable increase still in the membership list, and there is an ever-expanding field of usefulness for the Association. In the near future we should see it become the leading trade organization of its

"No Man Can Play Go-it-Alone Policy"

How Need for Closer Co-operation Among Members in Lumber Industry is Being Recognized and Growth of Unity and Mutual Helpfulness Encouraged

By Chas. A. Bowen, Detroit, Mich., Secretary National Retail Lumber Dealers' Association

Charles A. Bowen, Detroit, Mich.

I do not know exactly what I can say to you at this particular time which will be of any value to your readers. It does seem to me, however, that the conditions which have been surrounding the business men of the United States and the Dominion of Canada for the past two or three years have been of such a character that it is particularly emphasized to them in possibly a little clearer way than ever before, the great need for a closer co-operation among the members of the trades. I believe that to-day there is a larger spirit and a greater desire for co-operation on the part of business men with the fellows in their same line of business than there has ever been before, and that this has increased very much even during the past twelve months.

In the United States we notice particularly that the different associations of lumber dealers in the cities, in the states, the various regions and in the National, have grown very materially in membership, thus indicating that the retail lumbermen at least are awakening to the values of co-operation through organization and a co-ordination of interest.

The times are such that business men absolutely cannot play the "go it alone" policy, and the need of advice and association from and with their fellows is being brought home to them very clearly, because otherwise they would be "all at sea" as to what course to pursue in any direction.

The value of the National Association has been emphasized to them by the work which this Association has done of a national character, such as looking after their needs from a government standpoint; working out and securing national legislation to their particular interest; securing for them what business there was to be had from the government during the war period, and seeing that the surplus of material in lumber, etc., was turned back by the government into the proper channels, and not dumped upon the market to be sold at ruinous prices to the industry.

The matter of proper trade relations between manufacturers, wholesalers and dealers and between the dealers in the different localities, has also been of infinite value to them, and all of these things would not have had any bearing from any one district or group, but were brought about by the broad national co-operation represented through this Association.

Better Merchants and Community Leaders

Business generally, in the larger cities of the country, is getting back very nearly to a pre-war basis, although in some sections the high prices of material is still retarding building activities, but this is being gradually overcome.

Detroit probably stands out more clearly in this direction than any other city of the country. The activity of the building interests in this city are even greater than during the pre-war period, and the building permits of this city for the six months of the year 1919 show an increase of over \$2,000,000 over the first six months of our banner year, which was 1916, when we had over \$52,000,000 worth of buildings.

The public were taken into the confidence of the supply dealers, contractors, architects, bankers and others, through a general meeting early in the year, when it was clearly pointed out to all interests concerned, that what was considered high prices was not out of proportion; that there would be no lower prices for reasons which were definitely pointed out, and that if anything, prices would go up rather than down, and convincing arguments were presented from all sources to show that these statements were absolutely reliable. The result was, building has gone forward very rapidly, and had this course been pursued by those in the other cities, as recommended by our National

Association, we believe it would have had the same effect, and building of all character would have been enhanced.

This in itself, we believe, shows that the tendency of the lumber industry is to be better merchants; to take a larger interest in the conditions which surround their localities, and to be leaders in the enterprises wherein they are interested, rather than followers.

Unfortunately the lumber dealers are not yet up to the standard which this Association hopes for them, but it is a condition which cannot be brought about overnight, and we believe that the continued agitation, educational features and other propaganda which is being put out by this Association, will ultimately bring about much better conditions, if not all that is hoped. We predict for the retail lumber business a bright future and good business for many months to come. There must, however, be no spirit of complacency, but one of close concentration and keen observation, together with a spirit of endeavoring to improve conditions individually and generally, if this prosperity comes, which we predict, and if it is to be of any particular advantage to the industry.

The Convention of the National Retail Lumber Dealers' Association of the United States, which will be held in the city of Detroit, on September 11 and 12, will be, it is anticipated, one of the best gatherings of retail dealers, particularly of the larger centers, ever held in the United States, and is to be of a character which is to be a bigger and better helper to the dealers than they have had before. It is to be largely a Congress given up largely to discussions of pertinent matters of paramount interest to the dealers themselves, and discussed by them themselves, and in which some definite action can be taken looking to a future policy in these things before the conference closes.

We will welcome all of the dealers of the United States and Canada who can possibly find time to attend this conference, whether they are members of the Association or not, and take pleasure, through your publication, in extending this invitation to our Canadian friends.

Using Mill Waste for Making Paper

The manufacture of pulp and paper from wood is an industry which has proved itself stable and of increasing magnitude for a number of years. Almost every kind of wood has been proved suitable for the manufacture of some form of paper, but there are considerations affecting the use of each kind which must always be observed. Most of the pulp is made from the wood cut especially for the purpose, but almost any wood can be used, provided that it is reasonably free from dirt, knots, and bark, or that these can be easily removed from it.

Sawdust is an exception to this rule on account that the fibres are cut so short that the pulp produced will not felt properly and the cooking is made considerably more difficult. There are several mills in the United States at present using millslabs, shavings, and other forms of waste more or less entirely. The advantages of waste wood are, of course, its cheapness and its quantity. There are several disadvantages; it is usually green and full of water, has a large percentage of bark, and comes in irregular shape. Shavings are rather better for the purpose, and, if in sufficient quantity, make very good raw material.

Another point to be taken care of in using waste material such as this is to use the raw material of only one species, or at least species sufficiently alike that they may respond to the same treatment. For instance, on account of the relatively large content of resin in long-leaf pine, it would not do to treat this in the same way as spruce. Neither will it be satisfactory to work hard and soft woods together in any one treatment, though any of these can be worked satisfactorily if kept separate. The process to be used will depend chiefly on the raw material at hand, and on the market for any particular variety of pulp, as stated in a circular entitled, "Chemical Methods of Utilizing Wood Wastes," by W. B. Campbell, B.Sc., issued by the Forestry Branch, Department of the Interior.

The manufacture of pulp has been started in various parts of Japan, and it is expected that within a few years home production will be sufficient to meet the demands. About 800,000 tons of pulp were consumed in 1918.

Eliminating Fire Hazards in Woodworking

Some Practical Suggestions Along the Line of Safeguarding the Industry and Installing Appliances That Will Reduce Rates and Insure Safety

By E. D. Hardy, Ottawa, Can.

E. D. Hardy, Ottawa, Ont.

Woodworkers may roughly be divided into two classes: First, those which deal with the raw material, such as saw mills, pulp mills, tie mills and shingle mills; second, those which deal with the products of the log, such as planing mills, carriage factories, organ factories, cabinet factories, and other plants of a more or less similar nature, which are known by different names, according to the kind of article manufactured.

The latter class may be subdivided under the head of planing mills city and country, and factories which specialize in some particular form of woodworking and turn out the finished product.

The construction of woodworkers differs materially, according to the nature of the operation and the particular processes employed.

The saw mill, taken as an example under the first general dealing with the raw material is usually constructed of frame with heavy rigid timbers and a metal or gravel roof. The power house of brick, stone or cement.

Planing mills are frequently constructed of brick, frame, or metal clad, with power house of same construction.

Factories are more often built of brick or cement with a power house of similar material.

All the more modern plants are using cement for foundations, walls, or the completed structure, inasmuch as this material offers greater economy in building and is more easily handled.

For the larger plants steam still furnishes the usual power, although electricity is now being used, particularly for the smaller woodworkers, on account of the economy involved, since by operating each machine under a separate motor, the usual wear and tear on the shafting, as a whole, is eliminated.

Lumber Yards

Among the faults common to lumber yards in connection with mill plants, there is probably no condition of the insurance policy which is more often violated than the clear-space clause. This violation of the clear space is usually due, first, to the ignorance on the part of employees as to the purpose and meaning of the clear space clause; second, to carelessness on the part of the management in allowing temporary piling within the clear space as a matter of convenience, and, third, to the absence of any suitable erection to define the limits of the clear space.

The clear space should properly be measured by an insurance inspector, or one who understands the purpose and conditions of this clause. Permanent "fire limit" signs to designate the confines of the clear space offer a simple, but effective, remedy for many of the existing evils.

The Hazards and Their Character

Primarily, there are two hazards which determine the character of woodworkers, as in fact any property which an insurance policy may cover. First, the normal hazard; second, the physical hazard.

In the case of the larger operations which handle the raw material, aside from the question of financial resources, the hazard is largely determined by the number of years' timber supply on which the life of the operation depends, the accessibility of the plant to the timber limits, the size and quality of the timber and the state of the lumber market.

Financial embarrassment and the necessity for ready cash often create the most serious kind of moral hazard. Therefore, insurance companies do well to avoid risks where, for any reason, there is doubt as to value or productivity.

According to one writer, not only the desire to destroy, but also the lack of a strong desire to preserve, creates moral hazard, so-

called, and it is hard to say which condition is the more dangerous. The prospect of a profit from fire or the absence of a financial incentive to preserve a risk, make it impossible for an insurance company to rely upon the exercise of that due care and diligence for its protection which is essential if business is to be transacted at a profit.

Another situation which frequently incurs moral hazard is when the property insured becomes involved in litigation, or when there is a dispute as to ownership.

Any woodworker which may be considered objectionable or a menace to surrounding property may be subject to a moral hazard on account of the ill will of those to whom the property is objectionable, and not infrequently, a discharged employee becomes a dangerous menace.

Physical hazards may be divided into external and internal.

In addition to exposure, the external hazards include lightning, conflagrations, sparks, bon-fires, forest and prairie fires.

Of the external hazards affecting woodworkers which handle the raw material, such as saw mills, forest fires probably offer the greatest menace and are the least controllable.

Arousing of Public Sentiment

The causes of forest fires are numerous, but are usually the result of carelessness. Undoubtedly, the railroads are responsible for by far the largest number, while others may be attributed to careless campers and hunters who leave their fires without properly extinguishing them. The lumbermen themselves have also contributed to the destruction of the forests by leaving their slashings scattered over the ground where they easily become the prey to sparks from logging trains and donkey engines which are now used extensively in logging operations.

Fortunately, public sentiment has at last become aroused to the necessity for action if our forests are to be preserved, and steps are now being taken to reduce the annual drain on our natural resources and the attendant waste to property subject to forest exposure.

Fire patrols, lookout towers equipped with telescope and telephone connecting with the merest settlement; laws requiring the right of way on either side of the railroad to be kept free from underbrush and inflammable material; the use of wire screens on locomotives; the greater care which lumbermen are using in burning their slashings, and the severe penalties imposed on the settler who endangers other property by his bush fire are all important means which should be encouraged to reduce the serious effect of these national bonfires.

Notwithstanding these precautions there seems to be no distance from which property is entirely free from such exposure.

In the larger towns and cities we have the exposure from old and dilapidated buildings and the conflagration hazard, the only remedy for which lies in the more rigid enforcement of the present building laws and greater co-operation between the insurer and the assured.

If more attention were paid to the subject of construction, the loss ratio on woodworkers, as well as on other classes of risks, would be appreciably reduced. Instead of consulting insurance experts before deciding on plans and building specifications, the assured usually decides how the plant should be constructed for the convenience of the operation, without considering the question of fire prevention until the matter is forcibly brought to his attention by the insurance companies' rate.

Pay More Attention to Construction

If there could be a better understanding between the insurance companies and property owners so that before erecting a new building the insurance companies could furnish the prospective builder with specifications calculated to reduce the fire hazard to a minimum and insure the lowest rate, a great advance would be made in reducing the present annual waste from preventable fires. While in theory the insurance companies are doing this, there does not seem to be the proper co-operation between the insurer and the assured calculated to produce the best results for both.

Of the most important external hazards, sparks play a very important part in increasing the number of fires affecting woodworkers. Locomotive sparks alone are responsible for a large number of the fires originating about a lumber plant, particularly where they are employed in a lumber yard.

Such steam motors should be equipped with closed ash-pan and

outside bonnet spark arrester. Every saw mill plant should be equipped with standard refuse burner and standard spark arrester, unless smoke stack is constructed of brick.

The interior hazards are more numerous and differ according to the operation and the processes employed.

Of the internal hazards peculiar to woodworkers might be mentioned, faulty construction, which allows the shafting to be thrown out of alignment and permits friction of machinery, resulting in heated bearings, which often ignite any adjacent inflammable substances.

Open gas jets, unprotected electric lights, defective wiring, steam pipes passing through or adjoining unprotected wooden surfaces, stoves and forges without metal covering on floor beneath, sparks from emery wheels in contact with oily waste and smoking are a few of the many causes of preventable fires affecting woodworkers.

It is obvious that the best way to combat fires originating from such sources is to eliminate the cause.

Other Hazards which Should be Avoided

There are other hazards peculiar to certain classes of woodworkers on account of the various processes employed. The use of inflammable mixtures for painting or japanning, the improper use of fire heat under kettles and glue pots are all conducive to a fire unless proper care is exercised.

Spontaneous combustion is not uncommon wherever vegetable or animal fiber is handled or stored, especially when these substances become saturated with animal oil or grease.

The more hazardous the process, the greater should be the precaution against fire. In all factories where paints and oils are used, sand is the most effective means of preventing the spread of the fluid, and a hand extinguisher is usually sufficient to exterminate an incipient blaze.

The fine dust which accumulates on the interior walls and rafters of any building in which the process of woodworking is carried on, constitutes another serious hazard, inasmuch as it is susceptible to the smallest spark and, on account of its prevalence and ignifiability, rapidly carries the fire to all parts of the structure, unless confined to a limited area by cut-off walls and automatic fire doors.

The most effective prevention for fire originating from this source is found in the steam cleaner, which is composed of a rubber hose connecting at one end with a valve attached to steam pipe. The other end of the hose is attached to an iron pipe with wooden handle, on the end of which is a flexible nozzle operated by a cord to direct or bend the nozzle in any direction.

This equipment can easily be installed in any woodworker at a small cost and will clean walls, ceilings, bearings, pulleys and machines.

The oil hazard was formerly a source of great danger, especially to saw mills and planing mills; but now, thanks to the more modern appliances, such as ball bearings, self-feeding drip cups and pans for catching the oil and grease which exudes from bearings, this hazard can largely be removed, provided there is the desire on the part of mill owners.

Fires Originating from Dry Kilns

One of the necessary evils in connection with woodworking plants is the dry kiln. The large number of fires resulting from the process of drying lumber and the severe loss to insurance companies has led to a careful investigation of the cause of fires originating in dry kilns and the proper remedy.

"Experience has demonstrated," says a recent writer on this subject, "that half the fires in woodworking shops start in the boiler room, the shavings vault or the dry room; also that steam is the best means of extinguishing fires in such small and confined places. However, as fire employees often forget the steam jet until the next day, automatic sprinklers have been demonstrated to be the most effective means of putting out fires. These facts have led to experiments with automatic steam sprinklers, and their very successful use in a large number of cases shows that they are not only entirely feasible, but the best possible aid in extinguishing fire. Steam has proven its value in boiler houses, shavings vaults and dry kilns, and is the only means of conquering fire in the dry room with small loss."

When all ascertainable hazards have been classified and the causes for fire set forth, so far as we can ascertain them, it is estimated that there yet remains about 16 per cent. of all fires for which the causes cannot be discovered.

Included among these are many incendiary fires, the only safeguards for which are efficient watchman services, fire alarm signals and private fire protection.

Lumber yards and woodworkers enclosed with a high board fence with gates, which are shut and locked at night, will help to keep out tramps and undesirable characters, which are always a menace to any property.

All of the foregoing facts are merely a general index to the

subject of physical hazards. With the ever-changing conditions, the different materials used in construction, the hazards arising out of new processes of manufacture, and the modern inventions, it is only natural that, if the insurance companies are to keep pace with the times, the work of investigation and safeguarding of these hazards must be left more and more in the hands of experts.

In addition to technical men, we need a better adaptation by the assured of the knowledge and experience which we, as underwriters, have already acquired. We need not so much new building laws as a better enforcement of the present laws, a greater spirit of co-operation between the insurer and the assured, which can only be brought about by a thorough system of education, by which we will be able to impart to others the knowledge which we have acquired from our study and wide experience, and take from them whatever information will lead to a better understanding of their requirements.

We should encourage a wider use of the means for extinguishing fires, such as automatic sprinkler systems and other devices for fire protection, ever striving to inculcate in the minds of mill owners the old principle, that the best fire protection is prevention, which consists in eliminating, so far as possible, the causes of fire.

Will Paper Shingles Replace Wooden?

Paper shingles are rapidly taking the place of the wooden kind in Worcester, Mass. Architects and contractors as well as agents for the paper variety claim that paper shingles of first quality last as long as first quality cedar shingles. However, paper shingles have not been in use long enough to make this claim absolutely certain and tried out by experience, but the manufacturers solemnly add the weight of their word to the claim.

The best quality of paper shingles cost about 75 cents to \$1 per 1,000 more than the best quality wooden shingles. Twenty years of actual endurance is guaranteed for some grades of the paper make. Old houses and barns in and around Worcester have had first quality pine shingles on the roofs now that lasted for fifty and sixty years without a leak.

Paper shingles, felt shingles, and metallic shingles made out of cast off tomato cans are the latest roofing features in Worcester. They are all fireproof and are intended to take the place of wood shingles. Owing to war time conditions the supply of wood shingles became short and manufacturers of the paper and tin can kinds have been doing their utmost to introduce the fireproofing sort. Wooden shingles are in three grades; one is known as the clear; another is called the clear butt, and the best quality is known as the extra clear. The butts have knot holes in the sections that are nailed out of sight.

There are scores of Worcester houses with paper shingled roofs, and they have been shedding rain and snow, some of them for several years, so that paper shingles are not strictly new, but the tomato can kind is new. Tin can shingles are not known under that name; what architect would specify a roof shingled with tomato cans for a client. The tin can shingles are known as metallic shingles; stamped metal roofing and composite metal shingles. It makes no difference what they call them, they are often tomato cans in a new form.

The Growth of Forest Trees

Investigations carried out by the forestry officers of the Commission of Conservation show how extremely slow is the growth of our forests. It has been ascertained that a balsam with a diameter of 4 inches has taken on an average 55 years to grow. It would be 70 years old when 8 inches in diameter and 80 years when 10 inches. These measurements were taken breast-high.

And the balsam shows rapid growth by comparison with the more valuable spruce, which has but a diameter of 6 inches on attaining its century mark. The 12-inch log of the lumberman is rarely taken from a tree aged less than a couple of centuries. The foregoing measurements apply, however, strictly but to Quebec; in other provinces the growth may be either slower or quicker according to conditions.

Such statistics should cause us to think furiously ere cutting down a tree. The Canadian, like his emblem the beaver, is a tree-felling creature. Instead of invoking a blessing on the man who made two trees grow where there had been but one, he reserves his admiration for the axe that brings the greatest number of tops to the ground during a short winter's day. This was all very well, when men were scarce and trees prodigiously abundant, but men having increased wondrously as mature trees become less numerous, it is high time that we learned to acquire something of the respect in which the European, especially the Frenchman and the German, regards a tree—otherwise our descendants may have to import their timber from those who, while having an inferior stand to start with, yet manage it so well that generation after generation there is a sufficiency for local use, and even a little for export.

How the Timber Limits of Ontario are Held

Evolution in the Methods of Disposing of Licenses—The Various Species of Wood Found in the Province and Their Wide Distribution

Early in the nineteenth century much timber wealth was given away in the form of grants to lumbermen and speculators, although as far back as 1789 the government had reserved the timber and was issuing a form of timber cutting licenses. But no actual cutting fees were collected till 1826. To evade these dues lumbermen bought the land, stripped it of its timber and then let it revert to the government.

In 1841, each province in the Dominion was given control of its own timber. Then the "sales of land" were changed to "licenses to cut." To further increase the revenue, a little later the limits were sold by auction, the purchaser paying this auction price or "bonus" plus the "stumpage dues," as the timber was cut. In 1849, the term license was limited to one year, but these licenses were renewable. Two years later the ground rent system was inaugurated. That is an additional charge per square mile was collected annually.

Thus we have "bonus," "stumpage" and "ground rent" the basis, with modifications, for the method of securing the most of Ontario's timber limits, which are held at the present time.

The regulations of 1869 apply to most of these Ontario berths. The principal clauses of these regulations state:

The berth shall be surveyed at expense of licensee.

The berths shall be offered for sale at auction at an upset price.

License-holders complying with regulations shall be entitled to have licenses renewed.

Transfers shall be subject to approval of Commissioner of Crown Lands.

All licenses shall expire on April 20 and shall be renewed before July 1, when all dues must have been paid.

All licensees must make sworn statements of amount of cut.

After 1892, any new licenses issued were for pine only, and did not include hemlock, spruce and hardwoods, as did previous grants.

In 1871, the districts of Muskoka and Parry Sound were put on the market, when 487 square miles were sold at a bonus of \$117,672, or an average of \$241.60 per mile.

Ground rent was \$2 per mile.

Stumpage dues for square timber 2½ cents per cubic foot.

Stumpage dues for saw logs \$1.50 per M feet.

One report shows a bonus of \$835 per square mile having been paid about 1885. In 1913, ground rent was \$5 per mile and stumpage \$2 per M feet.

The method of selling by square mile in Ontario has been replaced in late years by the better one of a price per thousand feet. But, as this change does not apply to already issued licenses, its effects are not yet far reaching. A complete history of the Crown timber regulations is given in the report of the Minister of Lands, Forests and Mines in 1907 for Ontario. Each province in the Dominion has its own specific governing regulations, governing the sale of crown timber lands.

The Different Types of Forests

Three types of forest may be recognized in the Georgian Bay and North Shore region. The first is the mixed coniferous or ridge type. This is a two-storied forest with the upper story white and red pine, varying all the way from 30 per cent to 85 per cent. white pine and 10 to 35 per cent. red pine. The lower storey is composed of the following species, in varying percentages: white, spruce, balsam, black spruce, birch and poplar.

Toward the north of this type Jack pine, while not numerically prominent, comes in very thickly after fire, whether this occurs before or after logging. Toward the south, around the Parry Sound district, cedar and hemlock, as the two most tolerant species, form a great percentage of the lower story. The upper story is from 90 to 110 feet in height, while the lower is only 30 to 60 feet, with the white spruce somewhat higher wherever it occurs.

This type invariably occupies the poorer sites, the sides and tops of rocky ridges and on the poorer sand soils. Much of the white pine shows butt rot, which extends a long way up and often requires the culling of the butt log. Many experienced sawyers are able to locate the extent of this defect very well and saw a portion off a portion of the butt. This defect, as well as punk knots, seems to be confined to certain localities or exposures.

Estimates give 20 to 25 M board feet per acre as the maximum stand of pine, while the average is variously estimated at from 6 to 10 M board feet per acre, with 12 to 20 logs per M board feet.

The reproduction in this type when fire is kept out is chiefly balsam and spruce, with hemlock in the lower regions. However, when fire occurs Jack pine, poplar and birch come in very thickly.

A modification in this type occurs in places and might be made another type altogether. The upper story is a pure stand of red pine, even-aged and very old. As in the other, the reproduction is chiefly spruce and balsam, with a slight amount of red and white pine.

The Hardwood and Swamp Types

The hardwood types occur on the better soils, such as low ridges and flats. The principal species are maple, yellow and paper birch, poplar, and occasionally red oak and ash in the order named. Only in localities where there is a local demand for such class of material, is this type logged at all. However, as soon as closer utilization indicates an adequate return these species will make up a larger and larger proportion of the cut. Any coniferous young growth in this type is confined to white spruce and balsam, but in much of it the cover is too dense for any reproduction as yet.

The predominating species of swamp types are cedar, black spruce and tamarack. Black ash and yellow birch occur on the drier parts. Around the edges white spruce replaces the tamarack. The total stumpage is very small and forms a very minor part of the cut. In fact, it is only where closer utilization is possible that any material is logged in this type.

Cedar is usually large but very defective and where logged at all is used for poles, posts and ties. But cedar, as well as other swamp species, is more frequently used for road and other construction purposes. The first two types comprise 75 per cent. of the timbered area.

A splendid stand of hemlock timber in Simcoe County, Ont.

Hordes of Caterpillars Killing Pine Trees

Much Havoc Wrought by the Voracious Pest—Difficult to Fight as the Worms are Aggressive and Scattered on Some Tall Timber in Ontario

Editor, "Canada Lumberman":

There is a pest destroying our pine forests in Ontario—threatening their very existence at a number of points in the East and I think it is high time the attention of the provincial and federal government is forcibly called to this menace. The pest must be exterminated before it spreads all through Ontario and beyond and utterly ruins what is left of our Canadian pines.

The evil to which I refer, is a small worm or caterpillar which devours the foliage of the pines, thus killing the trees. By this mail I am sending you a few specimens of this worm in a small bottle and also some pictures showing in a small way some samples of the havoc wrought by these worms.

Last summer a friend wrote the Ontario Provincial authorities about these worms and sent a sample. He received a polite reply acknowledging receipt and endeavoring to name and classify the worm, but so far as we can ascertain no steps whatever have been taken to try and check the development and spread of the pest. Hence this letter to you.

These worms or caterpillars resemble in many respects the well-known "Tent Caterpillar" that is all too familiar a sight on our apple and pear trees, and has created such a terrible destruction in our orchards. These pine tree caterpillars are hatched out in families of a hundred or more. They cling closely together in a compact bunch or mass until the available food supply is exhausted when they separate and seek fresh pastures.

They Are Ravenous Eaters

Their appetite is insatiable. They eat constantly as long as there are any pine needles within reach. They grow very rapidly, and in two or three weeks attain a length of about an inch or a little more, by which time the portion of the tree in which they have been feeding is killed, and they are compelled to start on their travels in search of more pine needles. They do not waste time spinning a web or building a dwelling place as the tent caterpillars do. No, their time is wholly devoted to eating. If they would build a web or a "tent" it would be much easier to discover them. We have tried hard for three years now to rid this small island of the pests, but in spite of our almost daily search we find it impossible to get rid of them entirely as some of them are too high up for us to get at; so they can placidly continue their work of destroying the large pines without molestation from us.

We find there are three ways of locating a cluster or family of the worms. First, by actually seeing them; second, by noting their destructive work in the tree, and seeking in the close vicinity for the destroyers; third, by the yellowish green droppings on the ground under where they are working. These green droppings on the ground have betrayed the presence of many a nest of worms when a careful search of the tree had revealed none. For they are difficult at times to locate, as their bodies are of about the same color as the pine needles on which they feed.

They Multiply Very Rapidly

As an instance of the alarming rapidity of their increase, we first noticed them on this (Bear) island in 1917 and destroyed all we could find, probably a dozen or more nests. In 1918, in our last summer's vacation, we destroyed by actual count over one hundred clusters, and hoped that we would find the island reasonably free of them this year, but instead they are worse than ever, and to date we have destroyed 310 clusters or families this summer on this island, which is not more than a quarter of an acre in extent.

Harvey Gunter, provincial fire ranger for this district, says he has seen hundreds of acres of pines absolutely destroyed by these worms. "Harve" may at times be guilty of verbal camouflage, or even of exaggeration, especially when talking of hunting or fishing, having been much in the company of city bred hunters and fishermen and having thus absorbed somewhat of their ways. But in this case, I have no reason whatever to doubt his accuracy, as he has had especially good facilities for observing in his varied roles of fire ranger, game warden, guide, hunter, fisherman and lumberman. Besides, my own observation amply supports his statement.

The pictures sent you were taken on Bear Island, situated approximately on lots 28 and 29 First Concession of the Township of Ashby, Frontenac County. While picking huckleberries on this island the worms seemed to be everywhere. They were dropping off

the trees they had destroyed on to the ground, on myself and in the berry pail (from which I extracted dozens).

In their search for more pine needles to devour they were crawling over the ground, up the berry bushes and shrubbery, up the poplars, birch or any other tree that came handy. In fact one would have to actually see them and have them crawl over his own person to appreciate their numbers. Bear Island is only one of many such places I have seen this season. Moreover I have noted them in quantities this year on shores where they were entirely absent last year showing that the plague is rapidly spreading.

Ever on the Search for Prey

As we are here for a few weeks only in the summer we have not had opportunity to learn or observe the whole cycle of the life of these caterpillars, but presume they came from a butterfly, moth, or other winged creature, owing to their presence on the islands, and also due to the fact that we are more apt to find them close to the shore, rather than inland in pastures that are new to them. In subsequent seasons they spread inland and destroy all as they go. It would thus appear that they fly across the waters often to find places to lay their eggs where the trees are not already destroyed, but will furnish plenty of food for the young when hatched.

I have no remedy to suggest for this plague of worms. We have highly paid experts for this purpose. It is a difficult proposition. They will be hard to fight, as they are scattered over quite an area, and on some pretty tall trees, but some attempt should be made to check them before they get so bad that the task will be absolutely impossible, and our pines destroyed.

In spite of the tremendous governmental war expenditures, Ottawa has been prevailed upon to make a grant to fight the white pine tree blister in southern Ontario. This summer several returned soldiers, university men, are heading expeditions to fight the blister; also to study its cause and to discover the best means to prevent it. If nothing better can be suggested, some such course could be adopted to fight this pine caterpillar plague, that is, a university man could be sent out with helpers to fight and study and observe and find remedies, same as they are doing for the blister.

The Norway Pine Suffers Most

The pine tree blister, so I have been informed, attacks only one variety of pine, but the worms eat any kind of pine needles, and seem to be more plentiful on the Norway or red pine.

The season for the caterpillars, in which they do their destructive work seems to be from about the last week in June to the middle or end of August. After that they disappear.

This letter has stretched out to a greater length than I had anticipated, but I sincerely hope you will be able to make use of, at least, some of the information given to start a publicity campaign against these pine tree caterpillars before it is too late. Too much time has been lost already through the apparent apathy and inaction of the provincial governmental authorities to whom the matter was referred. Somebody should do something to combat this plague.

This district was logged over some years ago, and there is here and there a splendid beginning of second growth pines, some only a foot high, and others several years old. It is these young pines that are suffering the most from these worms, although the older ones are also affected. But when we were too careless or indifferent to plant pines for future generations, to replace those we used, will we not, at least, make an effort to care for and preserve those which the Almighty has planted in His own way?

The specimen worms sent are bottled in coal oil. We have found that either coal oil or gasoline is fatal to the worms, and to make sure of destroying the whole cluster or nest of worms we simply cut off the end of the branch on which they are feeding and dip it in a can of coal oil. This is easier, quicker and safer than attempting to burn them. We sometimes throw the branch with the worms on it into the lake, but they live longer in the water and are apt to drift ashore alive, so have concluded that the coal oil is the most effectual.

Yours, etc.,
"EXTERMINATOR."

McCrae, Frontenac County, Ont.
August 19, 1919.

"Rambling Through the Region of Mystery"

Every Man Who Has Desire to Find Useful and Remunerative Occupation Can Have That Desire Satisfied in Greater Measure To-day Than Ever

By E. H. Newton, Vancouver, B.C.

E. H. Newton, Vancouver, B.C.

With the editor's permission, I would like to persuade you, dear reader, to lay down your work and cast aside your worries and go with me for a ramble.

I know that many of you will feel that you are too busily engaged with pressing obligations to spare the time, but never mind your obligations, come along and let us ramble along the enchant-strewn with blissful ignorance to ing trail of mysteries, which is gladden our hearts and teach us the lesson that work is an abhorrent and needless punishment inflicted upon us by some profit-seeking cuss, and that there is abundance for us without work, and that the more work we do the less we get. So what's the use of working? Come along.

We will have to travel fast and make few stops, as we have a long

way to go, since the trail over which I wish to take you reaches out over the length and breadth of this great country and into other regions, even beyond the seas.

We will not go into those other regions though, because we want to get away from work and forget that there are such words as "Trade" and "Commerce," and we must also banish all thoughts of such sordid things as capital and profit. We must remember that we have been travelling along the narrow trail of useful citizenship until it has become a rut, and as we are now entering a new era in the world's history, we must broaden out and take notice as we ramble along this other trail and see the vast wealth, and we must realize and understand that we have an inherent right to all this wealth, not by any special effort or merit of our own, but by the natural laws of this paradise into which we have now entered.

How beautiful is the picture before us! Wealth everywhere! In the forest; in the hills; on the vastness of the prairies; down the slopes; in the streams; the ocean and the air. Yes, wealth everywhere, and it all belongs to us. Now, aren't you glad you came? Never knew before that you were so wealthy, did you?

Now, having seen and established our inherent right to all this, if we can only oust capital and keep it away from it, and keep people from making profit out of it, we have an inexhaustible inheritance. And hasn't it been restful to get away from railroads and steamships and industries of all kinds, which represent capital, our great arch-enemy? Capital! Relentless capital! It goes into our forests, and into our hills, and wherever else wealth is to be found, and delves deep and develops it and builds railways and steamships to carry our timber, our mineral, our coal, our oil, our grain, and every other kind of wealth away for profit. We must rebel. We must! We must!

The Lost Key

We have now wandered a long way, dear reader, and we have seen wonderful things. But where is the key to the situation? Now I have said something. That is the question that the whole world is puzzled over to-day—where is the key? Millions of people have been hunting for that key for a long time, and many are becoming weary. It has been thought to have been discovered many times, but when it was tried it would not unlock the situation.

I am reminded of a game young folks used to play, called "Finding the Key." In that game the searcher was blindfolded. Is it not just possible that we also have some obstruction to our vision, or are following a delusion? Nobody seems able to describe a key that will turn smoothly and swing back the big door, that greater prosperity and contentment may enter.

There never was a time when greater opportunities presented themselves than the present. I believe that every man who has a desire to find a useful and remunerative occupation could have that desire satisfied in greater measure to-day than ever before, if he would endeavor to find his proper place and then "fall in."

Have you found the key yet, reader? If you have, you did

not find it where most people are looking for it. It is not there, nor never was.

To develop the resources of the country without capital; to lower the cost of living by raising the cost of production; to do less work and get more for it; to abolish competition to the degradation of efficiency; to crowd into the cities and let the land lie waste; to stir up strife and discontent, and to block the wheels of progress whenever possible are some of the keys that are talked of or tried, but they will not fit.

I am asked the question as to whether present prices of lumber products are likely to be maintained. I answer yes, and they are going still higher, and why not? The trend in everything is upward. Labor is not yet satisfied. It wants shorter hours and more money, and still more. The employer grants it and advances his product to meet the added cost. What else can he do? The same applies in all other lines, and the men who got the advance that caused the other advance turn around and find their extra receipts absorbed by extra expenditures, and who has been benefited? In the lumber business labor is the big item in the cost sheet, and when labor soars, lumber must follow.

New Capital is Timid

Of one thing I am quite sure, all newspaper talk to the contrary—until things become more settled we are not likely to be overburdened with new capital seeking investment. Those firms now having their money invested are doing the only thing they can do. They are making a display of courage and are trying to make the most of conditions.

We talk about profiteering, and sometimes say uncomplimentary things about it, but I want to tell you that the man with capital to invest, if he will put it into any business where he has to employ labor and figure on a close margin of profit, that man is not wise, and should have a guardian.

I am not a capitalist, dear reader, nor do I hold any brief for that or any other class. I believe in playing the game manfully. I know that there are some employers, though they are not in the majority, nor are they representative of their class, whose grasping proclivities lead them to, and keep them at, the border of "just within the law."

I know also, that the employee is not always free from blame, but that he also is too often found just within the law. I have studied both sides of this question for years, and I have found that the man who is ever ready to cry "thief" or "robber" will stand watching. I find people claiming that they cannot exist on the wages they get, and yet these same people can afford to lose thousands of dollars, or perhaps hundreds of thousands, for the sake of demonstration.

Our industry will become normal some day, but when it does, it will not be alone. Just when we will reach the turn I cannot say, but the load is becoming top-heavy, and may topple over, perhaps when least expected. In the meantime there is nothing better to be recommended than peace and harmony between employer and employed. This is a good old world yet, and there are lots of good, honest employers in it. There is also a very large representation of honest labor, and instead of chaos, as some might wish you to see, we are going to see a closer relationship and still greater sympathy and tolerance between the better class of labor and the better class of employer; and may God bless every effort in this direction.

Making Progress on Ontario Survey

Roland D. Craig, forest engineer, who has charge of the work of investigating and making a report of the timber wealth of Ontario, under the direction of the Commission of Conservation, is making satisfactory progress with the undertaking. Mr. Craig has secured a list of the timber limits and the owners of them from the Ontario Government and has started to interview leading lumbermen in various centres of the province. He states that he has found them, without exception, most willing to give any information desired. Mr. Craig has two men, Major G. H. Edgecombe and A. V. Gilbert, in the field making reconnaissance surveys of the Madawaska and Peta-wawa drainage areas. Though this survey is made in a somewhat cursory manner, remarkably good material is being secured for the mapping of the various types of forests of Ontario.

Picturesque Camp Life on the St. Maurice

Broad Steam Bears on its Bosom Some 14,000,000 Pieces Annually for the Different Mills—The Care-Free Jobber and How He Operates

By Romeo Morrisette, A.M.E.I.C.

The St. Maurice river is widely known for the log operations carried on in its territory. The area of its drainage basin is approximately fifteen thousand square miles, nearly all subdivided in timber limits, the boundaries of which were fixed in 1853. In 1870 some 250,000 logs were cut yearly and floated to the most important sawmills on the river. These mills were located at Les Gres Falls and at Trois-Rivieres. Since then logging operations have increased. The actual quantity of logs cut yearly amounts to some 14,000,000 pieces which are driven to different saw and paper mills along the main stream from La Tuque to Trois-Rivieres, a distance of one hundred miles. The various companies turn out 500,000 tons of wood products annually. The principal going concerns interested in the logging operations over the St. Maurice ter-

"Post" owned by the St. Maurice Paper Co., Three Rivers, Que., and situated at La Riviere aux Rats

ritory are: Brown Corporation Ltd., La Tuque; Laurentide Company Ltd., Grand'Mere; Belgo-Canadian Pulp and Paper Company Limited, Shawinigan Falls; St. Maurice Paper Company, St. Maurice Lumber Company, Wayagamack Pulp and Paper Company Limited and J. H. Dansereau, Trois-Rivieres.

These firms give employment to many thousand men who live for the great portion of the years in the woods and are employed hewing and log driving. Generally, they are engaged at the headquarters of the company, viz: Trois-Rivieres, Shawinigan Falls, Grand'Mere or La Tuque. They are directed towards a post or a section of logging operations in a certain part of the company's limits. This is done by rail or by boat; in the former case by using the National Transcontinental and in the latter by means of some small boats plying between Grand'Mere and La Tuque on the river which is navigable for a four-foot draught a distance of eighty miles.

At convenient points, in the heart of their respective territory, companies maintain posts, towards which radiate all their traffic. There each company maintains a staff of clerks, who receive reports on the progress of log operations in the sector to which they are attached. These posts are connected with the head office by telephone and telegraph. Generally such posts are located along the river St. Maurice or a railroad and there is also a general store or a kind of warehouse.

From Snowshoes to Patent Medicines

Groceries, snowshoes, boots, blankets, patent medicine, etc., are kept in store. A lumberjack or a jobber is supplied with a small account book in which is charged all the merchandise he may need in the course of his stay in the woods. At the end of the season, his book is checked and the total amount is credited in the company's book and deduced from his pay cheque.

The duty of clerks at the post is to receive orders from the head office and transmit the same to any jobber or camp fore-

man; to direct log cutters toward their proper field of operation; to forward any information for the proper execution of work and the welfare of the lumberjack.

When men have to wait at a post, there is also a cook and helper attached to the service. Men receive fresh meat, beef and lard. One of the accompanying illustrations shows a post along the St. Maurice river. This one is owned by the St. Maurice Paper Company, is situated at La Riviere aux Rats near Grand Anse and is a small village by itself. Every house has a stone foundation. The post is a frame building well wainscotted with clapboard and painted, and heated by stoves. In these posts clerks have private rooms as well furnished as any apartment in any ordinary country inn.

Log camps are operated in two ways—by the company or by jobbers. When operated by a company, the camp has many buildings, four, five or six and sometimes more than that. Another of the pictures presented gives an idea of an up-to-date log camp. In the back ground, there is the lunch house which is on the right; apart on the left is the stable and on the side are the sleeping houses. Some of these buildings have been built sixty to one hundred feet long by over twenty-five feet wide. They are one and a half-storey high and are provided with good windows. They are round timber cabins in which the walls and partitions are made of well selected logs carefully laid down.

The Equipment of the Quarter

Granite and tin plates are used for crockery. Cooks wear their white linen aprons and caps when attending to their duty and the clerks in charge of the camp receive instructions from headquarters regarding the supervision of the cook's kitchen and the preparation of meals.

The companies feed men with pea and bean soup, salted lard and beef, corn beef, meat in can, pressed prunes, apples, pies, molasses, sugar, butter, condensed milk, preserves, pickles,

A camp in the dead of winter. The large room on the right is the loggers' bedroom

home-made bread, etc. The menu for a meal includes: one sort of soup, roast or stewed meat with potatoes, bread, pickles, a dessert, apple or prune pies, preserves, cheese, tea or coffee with condensed milk.

In the sleeping house, beds are made with fir planks in a box shape with shallow sides. They are fastened to the walls and placed in two rows. The mattress is replaced by a couch of fir branches, and each man is supplied with a pair of gray camp blankets. It is estimated that it costs the companies \$1.00 to \$1.25 per day to feed each lumberjack. The St. Maurice Lumber Company employs on its own account some 525 men during logging operations and the entire St. Maurice operations require about 4,500 woodsmen.

On the St. Maurice territory, nearly every French-Can-

adian who owns a farm along the river is a jobber. During the summer he cultivates his farm, but when the harvesting seasoning season is over, and the tree leaves turn a golden shade, then the time is ripe for him to go to the "company" and get his log contract. He takes the work at a unit price. He will hew the tree, cut it in logs and haul to the nearest creek from his shanty.

The jobber hires his own men, three, four, five, sometimes to sixteen. Generally, they are brothers, cousins, or young men who contemplate saving enough to make a first payment in order to secure a patch of land on which to live in old days.

With the falling of the leaves the farmers quit their lands, take with them their wives, their children, their men, their horses—everything which renders their stay in the woods pro-

Cleaning up after dinner at one of the busy logging camps in the St. Maurice district

fitable and agreeable. This is advantageous to the company and to the men who are directly interested in their work and no strike can be feared.

The camp is built in the centre of the section granted by the company to the jobber. It is usually erected on the bank of a lake or creek, at a point reached by every trail or footpath. The buildings are the same as are the company's camp, but all live in the same house. There are two rooms, one used by the jobber and his family as a bedroom; the other converted into a kitchen, dining room and living room combined. In the back are located beds for the hired men. The stable is built apart and sometimes is adjacent to the camp.

The jobber enjoys in the camp family life as much as if he was staying on his farm with the difference that he converts the spare time when he could do no work on the farm into money.

The rationing of a family is by means of the section store at the post and is done without any loss of time. There the goods stocked are such that any lumberman's demand can readily be satisfied. For the season 1918-19, in one of its stores the Belgo-Canadian Pulp and Paper Company, Limited, had 450 articles permanently in stock. They are distributed under the headings: Provisions, clothing, mercery, iron mon-gery, tools, kitchen-utensils, tobacco, pharmacy, stationery, etc. The charges made by the companies are approximately the same as at any ordinary store in the vicinity. At any post there are fresh supplies of meat each week as well as fresh fish, etc.

Here is a table showing the amount of food required to are fresh supplies of meat each week as well as fresh fish, etc. develop the necessary calories to keep a forest inhabitant in good physical shape for one day when he is in the forest.

Potatoes	0.600 lbs.
Fresh and salt pork	0.600 "
Flour	0.400 "
Fresh beef	0.300 "
Beans	0.250 "
Peas	0.150 "
Sugar	0.100 "
Salt	0.060 "
Lard	0.050 "
Onions	0.040 "
Baking powder	0.013 "
Molasses	0.050 gal.

Next in smaller quantity: Rice, tea, raisins, apples, plums, milk, etc.

For the horses, they are fed on the following base:

Oats 22 lbs. per day

Hay 18 lbs. per day.

Hired men work at the job or per piece and some good workers get from \$100 to \$125 a month.

These jobbers who are generally French-Canadian, are healthy and good humored men and always in a mood to see things on the right side. They are fond of news, talking and stories. The writer, at the opening of the war, had to furnish many explanations on the development and the complications of the trouble in Europe. At that time he was in charge of surveying party. It is not a rare sight to see these men up late at night listening to some educated visitor discussing different themes. There is no theatre, no movie and no church but there are trees, white snow, icy lakes and far away neighbors.

The Joys of the Winter Evenings

These people enjoy their life. They organize dances, music and concerts. They visit among themselves and preserve a kind of social life which might be called woods society. They laugh, play and amuse one another, but when all have departed the whole family kneels on the floor. Then the winds carry on their wings a soft murmur. Far into the back country and in the deepness of the forest, the jobber's family thanks God for His care and protection over them in their daily struggle for bread.

The author of this article is indebted to J. M. Dalton, Robert F. Grant, Chas. Lebrun and R. Liagre for much of the data concerning the picturesque camp life on the St. Maurice river.

Publicity That is Worth While

"Money just thrown away," "No good whatever, I tried it once and got no results," "My goods are so well known that no publicity is needed," "Am doing all the trade I can attend to now," "Can't get the stock and have really nothing that I could advertise."

How often does the newspaperman advertising representative or director of publicity hear arguments like these advanced by manufacturers, wholesalers and merchants. One would think that there was no future for expansion, no service to maintain, no good-will to establish and that, by some hocus-pocus means, as soon as an announcement was inserted in the print it should bring magical returns and rich rewards.

One swallow does not make a summer and the effect of well directed, continuous and ably supervised advertising may apparently be slow in securing results, but the outcome is certain and satisfactory—backed up by the goods and the service. It takes time, effort, energy and perseverance nowadays to accomplish anything worth while. Instantaneous effects may be startling and speculative but rarely, if ever, are they permanent and substantial. Someone has said if he were asked to write the recipe for success he would do so in three words, "Repetition, Repetition, Repetition." And that applies very well to the kind of advertising that is successful. Not repetition of one Ad, but of the arguments and good points you want to establish in the consumer's mind. In advertising it takes time and quantity to produce the full measure of results. It isn't fair to judge advertising as the Indian did the white man's feather bed. He saw the white man using a feather bed so he took a few feathers, put them on a rock and laid down on them. After a few minutes he arose and declared the white man was a "heap big fool."

Player Piano and an Orchestra Next?

"Forks, knives and spoons to be nickel silver" is one of the demands that the Loggers' Union has made on the operators in British Columbia. There is no mention of a player piano, a victrola, an orchestra or finger bowls and cut glass but these will likely be made in due course. The union sent a circular letter to every operator in the province setting forth a few of the things the loggers would like. Among them were the following—minimum wage of \$5 per day and an eight-hour day, time and a half for overtime, semi-monthly pay for all camps, contract work piece system and bonus work stop, transportation paid for the worker and in case where the man is not kept long enough to earn \$25 the employer pay his wages for the time occupied in travelling back.

And here are a few of the creature comforts the loggers asked—all bunkhouses with six beds not to be less than 18 by 24 feet, beds to be fitted with springs, mattresses, two double blankets, sheets, pillows and pillow slips, sheets to be washed once a week; wash-houses and drying houses and bath houses for each camp with anti-septic soap and towels. And listen to this—earthenware must take the place of enamelware, forks, knives and spoons to be nickel silver, six men only at a table, kitchen utensils to be copper, aluminum or pressed steel, zinc and dish-up table to be lined with zinc. A reading room to be supplied to every camp and first-aid to be there also. That's all.

Evolution in Logging Camp Construction

Some Features Which Have Been Carried Out in Sleeping and Eating Quarters—Buildings That May Be Moved From One Location to Another

There was published in the last annual Camp and Supply Number of the "Canada Lumberman" illustrations of the camp car idea, so far as the accommodation and shelter of men are concerned. These camp cars have been used at various points throughout the western States. They consist of dining-room, smoking-room, lavatories, bath-rooms, sleeping-quarters, etc. One of the first concerns to make use of these movable habitations on wheels was the Snoqualmie Falls Lumber Co., Snoqualmie Falls, Wash. The general manager at that time reported that the camp car for long operation in any one spot was very economical and that its equipment was decidedly convenient. It was also stated by him that the quarters are appreciated by the better class of men, "but there is a type in the logging camps of the country who even though they get the chance, are not going to appreciate Paradise. However, we still feel there is enough good left in the personnel of the entire crew to justify giving them reconsideration and perhaps some day this element will awaken to the fact that one of the best things they can do is to assist in kicking off the job the class of men who preach discontent and trouble."

"We have two of these camps, known as Camp "A" and Camp "B," each of which consists of twelve cars; most of these cars are 14 feet by 60 feet. There are five bunk cars, thirty men per car, or ten men per room. Two dining cars, a kitchen, a commissary with a reading room in one end, an office and store car, a shop and power car and a car containing shower baths and a drying room."

Lately the "Canada Lumberman" made inquiry from Mr. W. W. Warren, general manager of the company, regarding his experience with this kind of camps, and he reports that there is no change in their logging conditions during the last twelve months. Since the first of the year the Snoqualmie Falls Lumber Company have had no complaint to make about the efficiency of their crews. They closed their camps on June 28th, shutting down six sides and settling up with all the men. They notified them that they would resume operations nine days later, or on July 7th. Mr. Warren asserts that sufficient help was on hand on that date to start four sides and that other men came in, in time to start the two remaining sides on the following morning. He adds, "whether the absence of liquor or the high cost of living away from the camp had anything to do with the men returning so promptly we do not know, but at any rate, they were on the job looking fit and our work is progressing satisfactorily."

Model Camps in the West

Among the most up-to-date and complete camps in Canada are those located at Port Neville, B.C., which are operated by the Vancouver Lumber Co., of Vancouver. The "Canada Lumberman" regrets that it has not been able to secure any photographs of these camps for the present issue, but hopes at a later date to be able to present some illustrations.

With the exception of the cookhouse, all of the buildings are constructed so that they can be picked up and put on the company's logging cars and moved from one location to another. The camp consists of a large cook shanty that will accommodate one hundred men at table without crowding; windows along each side. Tables run crosswise of the room so that it makes this building exceptionally light. For ventilation the roof of this building, as well as of all the other camp buildings, has a lantern or cupola the whole length of it on the same principle as a passenger coach. The kitchen is in the same building partitioned off from the main dining room, the ventilation of which keeps the room entirely free from the smoke and odor of the kitchen. The exceptional lighting given to this room by many windows makes a very cheerful and satisfactory dining-room. Right opposite and across the track from the cookhouse is the store and office building.

On the same side of the track as the cookhouse there are five sleeping shanties for the men. Each shanty contains eight double-deck iron beds with springs and mattresses. Each shanty will accommodate sixteen men without crowding and the beds are placed so that each man has a window at the head of his bed. In addition to these windows, as before stated, the shanty is furnished with the cupola the whole length of it the same as a passenger coach.

Across the track from these sleeping shanties there is a reading room for the men, also a wash room, laundry, modern toilets and

shower baths. These buildings, with the usual warehouses, complete this camp outfit. Running water is piped to these buildings, and, furthermore, the company expect to heat the camps with steam in the winter.

The camps are simply built out of rough lumber and are not painted, but they have many features of comfort that are not found in any other logging centre.

Do Model Quarters Allay Unrest?

Another Western concern, which has done a good deal in the way of improving its camps from a sanitary and living standpoint, when asked if the work undertaken was appreciated by the men and if the spirit of unrest and dissatisfaction which prevails in many camps manifested itself amid better and more congenial surroundings, states, "We think the men appreciate the comfortable quarters, but as to whether it makes any difference in the length of their stay in our employ we cannot say definitely; it may have this effect eventually but just at present our loggers do not seem to remain in our camps any longer than do those with the other firms which have not such commodious and comfortable quarters."

Several western operators report that, in spite of what has been done for the ease and comfort of the loggers during the past few months, there is just as much "Red" in their camps as ever. Bolshevism flourishes to a certain extent, notwithstanding what may be carried out to satisfy the material needs of "the boys." However, it is thought that most of this talk is a good deal louder than it is sincere, and that the allegiance of some of the loggers to any new propaganda is like the loyalty of certain individuals in a national crisis—rather of an uncertain character and quantity. If the men who are "filled up" with all the doctrines of anarchy, socialism, individualism, etc., do not become too obnoxious or irksome, they are tolerated by the managers of the camps, as frequently such individuals are the very best woodsmen—in fact, far above the average. Their tongue is the worst part of them, and if the men are allowed enough rope in proclaiming this and that view, they generally manage to choke the thing which they would keep alive.

"The general feeling is that there is much more shouting than there is absolute faith in the adherence of some of these men to the cause that they professedly espouse," declares a leading Mountain firm.

Progressive Concern Opens Another Office

The Jeffrey Mfg. Co., of Columbus, Ohio, have opened a new branch office in Detroit in the Book Building on Washington St. between State and Grand Ave. This step has been taken in order that the firm may look after, in a more efficient manner, the requirements of their customers in the Detroit district where the demand for Jeffrey products has been constantly increasing. The office is in charge of O. B. Westcott, who has had a long and successful engineering experience in the sales and engineering construction department of the company and is thoroughly qualified to render every assistance to clients in working out the most economical and practical material-handling equipments for their requirements. Mr. Westcott will give personal attention to inquiries for Jeffrey Portable Loading, Elevating, Conveying, Crushing, Pulverizing, Screening or Tipple Machinery.

An Insect Getting in Deadly Work

In certain sections of New Brunswick the young fir and spruce trees are being killed by an insect which first appeared in the province about four years ago. Lumbermen and guides from several of the interior districts report that there is hardly a green young fir tree standing in the big woods of New Brunswick and that many spruce trees have been almost completely destroyed. Trees, both large and small, are being rotted so as to be rendered almost unfit for profitable manufacture after they have been felled by the lumbermen.

The insect responsible for this damage is said to be still prevalent in some sections of the woods. It is a small white millar which lays an egg in the soft buds in the spring and from which a web is formed over the tender parts of the bowl and kill its growth. As yet it has not been found possible to successfully combat this trouble.

Will Promote Use of Home Grown Lumber

Representative Gathering in Great Britain Believes Supplies From Abroad are Limited and Some Steps Must Be Taken to Supplement Them

Great Britain is now giving serious consideration to the cultivation of home grown timber. Conferences on how to promote its use are being held. These gatherings are indicative of the spirit now actuating the home-grown timber merchant.

L. M. Ellis, formerly assistant superintendent of the Forestry Branch of the Canadian Pacific Railway at Calgary, but now Forestry Officer with the Board of Agriculture for Scotland, and headquarters in Edinburgh, states, in a letter to the "Canada Lumberman," that the trade is gradually getting together and working in co-operation with the consumers.

Mr. Ellis adds that he recently attended a conference promoted by the Timber Supply Department of the Board of Trade, Glasgow. A representative committee was appointed to further the objects desired, and among the subjects discussed were grading, seasoning, and how to secure the more general use of home grown timber.

Mr. Ellis observes that he was delighted with the earnestness and enthusiasm displayed in promoting the home-grown industry.

The Assistant Controller of Timber Supplies for Scotland, Sir John Stirling Maxwell, Bart., who presided at the gathering, made a comprehensive and instructive address which will be read with particular interest at the present juncture. Sir John remarked that he thought it was perhaps as representative a gathering as ever had assembled in Scotland to consider the question of home-grown timber. Besides a large representation of timber merchants, they had also representatives of architects, surveyors, the railway companies, the Office of Works, the Ministry of Health, the Department of Building Materials, the Interim Forest Authority, and other bodies interested in the subject.

Although it appeared that the government in future was going to take a very large part in the planting of woods, he hoped in this country the example of France would be followed, and that these woods would be exploited by the timber trade. Nothing in his experience in the Timber Supply Department led him to think that the government would be the best agent for the manufacture of timber.

Dwindling Foreign Supplies

The whole question they were considering ultimately depended upon how far home-grown timber really was required. Various views had been expressed on the question of our national supplies, but the government appeared to have taken the view at last that our supplies from abroad were precarious, and that some steps must be taken to supplement them at home.

The whole question of home-grown timber was apt to be prejudiced by very loose statements made from time to time as to the supplies of timber which the world possessed. The United States, with a very large area of woods, had been for many years in great anxiety about its timber supplies. The woods of the United States, vast as they seemed, were not large enough now for their own requirements, and the actual cutting of the wood was reckoned to be three times the annual growth, and the destruction by fire had also to be considered. They could therefore write off the United States as a source of supply. In Canada things had not got to the same point, but they must come to that point. The supplies of Russia, from which this country up to the time of the war was drawing half its whole supply of imported timber, were after all not much more than the United States and Canada added together. The point was that it took 75 years to prepare against a timber famine, and therefore anything that had to be done had to be done in good time. The whole subject was so often prejudiced by a belief, utterly unfounded, as he thought, that if we could get imports we could get all the timber we required. That, he believed, was not the case, and he believed the Russian Bolshevik had in his hands, if he liked to use it, an extraordinary weapon against the rest of the world by withholding the supplies of timber. Coming to the position of home-grown timber, he contended that the best timber we grew had never had a fair chance in our market. It had been treated as the refuse of the market. There had been the prejudice of the buyer and the want of organization among the producers, and they had to put these things right. The war had not put them right, although it had led to the use of an immense amount of home-grown timber. In some way it had emphasized the difficulties of the situation.

But he thought they had got a great opportunity during the

next few years. Supplies of timber from the Baltic and elsewhere had been coming in, but not in very large quantities, and freights were certain to be very expensive for some time. There would also be great competition for coniferous timber from other countries. Therefore, he felt that those who were going to be users of timber, and especially the government departments who had to use large quantities, would not only be justified but really were bound to ensure themselves against shortage of supplies from abroad. They were in a position when they could and ought to make contracts on a large scale covering a period of years until things returned to the normal. Home-grown timber would never have its proper place in the market until it was properly graded and until it was sold seasoned. Of course that entailed considerable expense, and arrangements ought to be made between the trade and the users which would bridge over these difficulties and put the home timber trade in its proper place. This could not be done without a fairly close alliance between the home-grown timber trade and the importing merchants, who had the mills and machinery which were required for putting the timber in order for building and other purposes. An alliance of that kind might be very much to the advantage of both parties.

Hon. Jules Allard Has Retired

Hon. Jules Allard, Quebec, P. Q.

Honorable Jules Allard, Minister of Lands and Forests in the Province of Quebec since 1909, has resigned and has been succeeded by Hon. Honore Mercier, Minister of Colonization, Mines and Fisheries. The retirement of Mr. Allard will be generally regretted as he has many friends among the lumbermen and pulpwood operators of the province. His administration has always been aggressive and energetic and his desire to conserve the natural resources of the province has ever been to the forefront. Quebec has possibly the most advanced and enlightened policy of any of the provinces so far as the preservation of its wooded wealth is concerned and no man has done more toward achieving this object than Mr. Allard. He has been a good friend to all those who

have wanted to see Quebec enjoy its rightful and natural heritage and save its resources from the hand of the profiteer, the spoiler and the devastator.

Mr. Allard was first elected for Yamaska in 1897 and also at the two subsequent provincial elections. He was called to the Legislative Council in 1905 and appointed Minister of Colonization and Public Works. In 1907 he was made Minister of Agriculture and in 1909 Minister of Lands and Forests. He resigned his seat in the Legislative Council in 1910 and was elected to the Legislative Assembly for the county of Drummond but was called back to the Legislative Council a few years ago.

The Industrial Value of Maple

Maple is the most important hardwood used by Ontario's wood-using industries, over three-quarters of a billion feet board measure being used every year. Accidental forms with the grain curled and contorted, known as curly maple and bird's-eye maple, are common and are highly prized for decorative work. Maple does not grow in any quantity north of the 49th parallel of latitude in Ontario. The material is used in twenty-eight industries. The greatest quantities are used for hardwood flooring, furniture, and wood distillation, as stated in a bulletin issued by the Forestry Branch, Department of the Interior.

Shantymen's Christian Association Expands

Work is Now Carried On Among the Logging Camps in B.C.—What the Organization Has Done in Allaying Unrest and Discontent Among the Men

By William Henderson, Toronto

Wm. Henderson, Toronto, Supt. Shantymen's Christian Association

As we were travelling home from the West a few weeks ago our train stopped at a station in Northern Ontario and a number of river drivers came aboard. Thinking that we might have some friends among them we walked through the smoker to find out.

As we looked them over and noticed the good clothes they were wearing, with light shirts and white collars, we recalled how different things were thirteen years ago.

Then, in place of these quiet, self-respecting, well-dressed men, the river drivers boarding the train were a reckless, noisy, roughly-dressed lot whom the quieter passengers wanted to avoid. At the first opportunity flasks of whiskey would have been secured and drunkenness

and disorder would have been the rule on the whole journey.

As we thought of this, contrast we felt that the interest we had taken in these men thirteen years ago had not been a vainly directed effort.

It is not merely in the drinking habits that the Ontario lumberjack has improved, but the religious work done among them by both Roman Catholic priests and Protestant missionaries, has kept them from being swept off their feet into the Bolshevik teachings prevailing elsewhere.

One Sunday morning in January we were sitting in a lumber camp in the far north when a Russian came into the office. After a few minutes' talk with him we asked "What do you think about the Bolsheviks?"

His answer was short but emphatic. "Damn fools."

"But," we continued, "there seems to be lots of them in Russia, how do you account for that?"

"All damn fools," again was the reply, then he added, "Lots of Bolshevik in this country. Government should take every man who talks this way and send him back to Russia."

These Bolsheviks in Ontario are to be found in the mines and on the railways, where, seven days' work a week, or other conditions, make it hard for the missionary to reach them. It is high time those responsible for such industries awakened to the fact that it is poor business to treat a man as an animal who has no soul, as he soon gets to think that way himself, and casting aside all moral restraints will utilize the force of numbers to try and destroy all employers of labor.

The type of employer like one who said to the writer years ago "These men are like a lot of cattle, and the more like cattle you treat them the better results you get," is sadly lacking in discerning the signs of the times, and is largely responsible for the growing class hatred being shown by these men.

More up-to-date and businesslike was the recent action of the Northern Wisconsin Loggers' Association, who asked the Shantymen's Christian Association to send missionaries to their camps, and assessed their members a certain rate to help defray expenses.

All Changes for the Better

While the regular camp buildings and conditions in Ontario have changed but little, yet every change has been for the better in these thirteen years.

For example, breakfast during the sleigh haul at four, or sometimes three in the morning is a thing of the past, and five or five-thirty is considered now early enough.

The large log sleep camps are still the favorites in Ontario, and best adapted for the cold winters, but iron bedsteads, with spring mattresses are becoming quite common in place of the hard wooden bunks. In other parts of the continent the men have had all kinds

of improvements made, and by way of contrast, we may mention sleeping on a miserable bed in a poor little office of a camp in Michigan, where in the men's sleeping camp there were spring beds with white sheets and pillow slips.

However, it is on the west coast, in the British Columbia camps that the men's comfort has been mostly considered. Here is one camp that we spent a night in which is a good specimen of many others. On one side of the logging railway running through the camp were the cookery and bunk houses. Each bunk house had accommodation for ten or twelve men. The beds were double decker single iron beds, and so arranged that every man had a window at the head so that he could lie and read if he chose. A ventilator ran the whole length of each roof.

On the other side of the track was the office, and a wash room with running water for the basins, and lavatories and shower baths. There was also a large reading room. In addition to the usual good food provided in every camp we noticed salad with hard boiled eggs also oranges that the men took as they left the table.

In common with other loggers the men only worked eight hours a day and all the heavy lifting was done by the donkey engines, and wages \$90.00 a month and up. Surely here there ought to be found contented men. In the first place we noticed that the reading room was crowded with gamblers who absolutely refused to listen while we tried to speak. Then in the second place, after we had spoken in the open air and made every one hear whether they would or no, and went round the bunk houses offering our little books, we were assailed by the usual Bolsheviks, for not assisting the laboring man to get his "rights."

Admitted Things Were Not So Bad

When we turned on one of these men and told him it beat us to know how much better they could have things than they were right there, he grudgingly admitted that they were not too bad.

It was quite expected that the loggers' union, which is under Bolshevik leadership, would strike for a six-hour day, and the employers had decided simply to shut down their works till they were ready to return to work for ten hours. The non-success of the Winnipeg strike, and arrest of the leaders, discouraged this move, so that members have gone on working.

We now have eight splendid missionaries at work among the logging camps in British Columbia. Two of them are well known in Toronto, viz., Rev. Oswald J. Smith and Dr. E. Ralph Hooper.

Our experience is that the preaching of the old fashioned fundamentals of Christianity does more to restore men to right mind than any amount of arguments, as nearly all received some such teaching in their boyhood. In the present condition of unrest all over the country we are firmly convinced that one good missionary makes more for the safety of the country than a regiment of soldiers.

Should any of the lumbermen in Canada desire to follow the good example of those in Wisconsin, our Treasurer's address is R. D. Richardson, 103 St. Clair Avenue, Toronto.

Great Growth of Pulpwood Disclosed

Cruising in airplanes over Labrador disclosed great timber lands from which millions of cords of pulp wood could be cut and rolled to streams for direct shipment, so members of a Boston expedition, which spent the past month there report. The expedition was forced to halt on its return when the steamer Granville struck an iceberg and experienced boiler trouble in the Gulf of St. Lawrence.

The expedition, which included in its equipment, three airplanes and comprised a personnel of twenty persons, among them five aviators, operated seventy miles north of Battle Harbor. Two million acres of timber lands was explored by air and by the ordinary methods of timber cruising. Pictures taken from the air, numbering 13,000, were said to show dense growths of pulp material in such manner that the most available places could be located readily. This use of the airplane was looked upon as opening a new field for commercial aviation.

The plans cruised inland for more than 100 miles, flying at heights of 2,000 to 9,000 feet.

Eastern Lumbermen Call For More Vessels

The Future of the Dominion Depends Upon the Facilities With Which Forest Products Can be Marketed Abroad—Merchant Marine Must Expand

By Elihu Woodworth, Parrsboro, N.S.

The effects of the peace negotiations upon Canadian business conditions have been disappointing. When the armistice was signed it was believed by many that important changes in the business situation would take place immediately, but the results thus far have been very different from what was anticipated. Unfortunately, the anticipated effects of the peace negotiations led to a number of changes in business plans which succeeding events have failed to justify. This is particularly true of the wooden shipbuilding industry in Nova Scotia, which reached its greatest development during the last year of the war and which appeared to be capable of still greater expansion. The industry began in a small way with but few engaged in it, but as the war went on more shipyards were opened and larger vessels were built every year.

During the latter part of last year plans were made for building many vessels of increased tonnage as compared with those that had been turned off in preceding years, and the numbers seemed likely to be at least quite as large as ever before. Then the armistice was signed, and many builders reconsidered the plans they had formed. They believed that, with the war ended, the prevailing freight rates would be reduced immediately, and that consequently the abnormally high price of shipping would speedily decline. They held that with these reductions in prospect and likely to occur at any moment, it would be impossible, considering the almost prohibitory cost of materials and the exorbitant rate of wages, to build vessels that could be profitably sold or successfully operated.

As a consequence, some of the builders who had planned to put on larger vessels than before, changed their plans in favor of vessels of smaller dimensions, while a few others decided to stop building altogether for a time. Those who had vessels in course of construction rushed them to completion with as little delay as possible, and some of them were probably somewhat surprised to find they had no difficulty in making profitable sales, even before the vessels were ready for sea. Those who had built for their own use and refused to sell found it easy to secure profitable charters. Up to the present the demand has been much greater than the supply, and the indications are that the scarcity of bottoms will continue indefinitely.

Ships Called Upon to Carry Food

The close of the war released a large fleet of merchant ships which had been commandeered by the British Government, and it was natural to suppose the return of so many ships to peaceful avocations would speedily result in a large reduction in freight rates. But sufficient allowance was not made for the obvious fact that the armies from overseas would have to be sent home—a task that of itself would give employment to the big steamers for many months. It was generally known that vast quantities of lumber and other materials would be required in Europe for reconstruction purposes, and it was thought that the return of peace would furnish all the carriers needed at largely reduced rates, but it was not generally realized that food was more urgently needed than anything else in the war-ravaged lands and that practically all suitable ships were required to carry food to the starving millions.

Lumber was much needed in England and prices ruled high, while in Nova Scotia and New Brunswick there were large stocks on hand, but the matter of transportation was a difficult problem. Tramp steamers, which before the war were glad to accept deal charters: prices which seem ridiculous when compared with current rates, were not to be had at the present exorbitant figures. Wooden square-rigged vessels had practically disappeared from the seas, and there was nothing left to carry lumber but the staunch three-masted schooners, with an occasional four-master, which had been turned off during the shipbuilding revival. When it was proposed to utilize the schooners as deal carriers it was objected by some authorities that their rig rendered them unsuitable for ocean traffic, and that only square-riggers were fitted to go "off shore." However, the experiment was made, with such schooners as were then in commission, and the result proved highly satisfactory.

The largest schooners available at the time registered less than four hundred tons and the majority fell below the three-hundred-ton mark, but they made speedy voyages and easy money for their owners and, for a considerable period, escaped the ravages of the U-boats. When the shipment of deals to the United Kingdom was resumed this

year very few steamers were to be had on any terms, but a fleet of schooners was available, and others that were yet unlaunched would soon be ready. The new schooners made a fine fleet of well-built, well-modelled, thoroughly up-to-date vessels, and most of them would average about twice the tonnage of the vessels they succeeded or replaced. The new schooners are not only supplying the urgent demand for lumber carriers, but they are establishing many new records, some of which would have been deemed impossible in the days when only square-riggers sailed the seas. The schooner has been proved beyond peradventure to be the best all-round rig, and it has practically no limitations with regard to size.

Excessive Freight Rates Continue

This province is undoubtedly handicapped at present by the lack of sufficient shipping. One proof of this fact is the continuation of the excessive rates of freight, which some predicted would shrink to pre-war dimensions as soon as the war came to an end. Early this year the freight on deals to the United Kingdom dropped to 300 shillings per standard, and several charters were fixed at that rate, but the price soon began to climb, and in a few weeks it had soared to 350 shillings. Of course, this is somewhat lower than the highest notch reached in war time, but it is, at least, ten times as high as the rate paid a few years before the war. It is evident that the scarcity of bottoms, rather than the high cost of living, is responsible for a considerable part of the advance in freights, and it would also appear that vessel property is a good investment at present. The excellence of the investment is really one cause of the scarcity of vessels in Nova Scotia.

During the last two or three years a number of large schooners were commenced in local shipyards with the intention of supplying the home demand, which was already becoming urgent. But the plans regarding these vessels were seldom carried out, for men from outside were ready, almost at the beginning, to make offers which in most cases proved irresistible. In this way many places—notably Newfoundland—acquired fine fleets of large, well-built schooners which they greatly needed, while the original shareholders received big returns for their investment—in many cases without effort on their part. Under such circumstances it is not surprising that the home fleet failed to grow, and, counting all the losses by shipwreck and German depredations, it is probable that this province had fewer bottoms a year ago than it had before the war.

Unsatisfactory Effect on Lumber Trade

During the present year, however, a great change has been made. Last winter was especially favorable for shipbuilding, and advantage was taken of it to turn off early in the year a number of vessels that were not expected to be launched until later in the season. These schooners and a large number that succeeded them have, almost without exception, been kept at home and have afforded almost the only means available for shipping lumber across the ocean. The scarcity of shipping has a particularly unsatisfying effect upon the lumber trade this season. The prices in the British market are so high that our shippers could afford to pay the excessive freights if they could be sure of getting such vessels as they want at the time when they want them. But this, unfortunately, they are seldom able to do, and more frequently they are compelled to wait for time and tide while the season for marketing their lumber is rapidly passing. In the meantime the Norwegians, who are able to ship much more cheaply, are rushing their lumber to market as quickly as possible, and if it were not for the fact that they too are suffering from a lack of bottoms, they would be able to secure what would practically be a monopoly of the trade.

The resources of Canada may be truthfully said to be unlimited, and it is equally true that the future of the Dominion depends upon the facility with which our products can be marketed. It is obvious that we have not enough vessels for our present needs, and that our merchant marine must be greatly enlarged in order to handle the increased production that must come. The matter has been taken in hand by the Canadian Government, and the Canadian Merchant Marine, Limited, is being rapidly constructed. This fleet consists of forty-five vessels of three types and seven sizes, ranging from 2800 tons to 10,500 tons. Two are of the size first mentioned and two of

the largest size, while no less than sixteen will measure 8100 tons each. These ships are being built at Halifax, New Glasgow, Levis, Three Rivers, Montreal, Kingston, Welland, Collingwood, Port Arthur, Prince Rupert, Vancouver and Victoria, and are giving employment to many Canadian workmen. When the ships are named each will have the word "Canadian" prefixed, and will thus advertise the Dominion in every port they visit.

Seven of these steamers are already in commission and have made voyages to the West Indies, South America and across the Atlantic. By the end of this year it is expected that the Canadian Merchant Marine will have twenty ships afloat, aggregating 100,000 tons. It is hoped and believed that before the end of another year the present objective of 300,000 tons will be reached. This fleet will help to take care of the greatly increased production that is expected and of the increased imports that are sure to come, and at the same time will serve as a very necessary complement to our great lines of railways. Meanwhile, our provincial shipyards are as busy as possible turning out an entirely different class of vessel, but one that is very useful in its way, and whenever one is launched it may be taken for granted that no time will be lost in providing it with a cargo for the British market.

Historic Lumber Co. Re-organizes

J. R. McDonald, Peterboro, Ont.

The oldest son of the late Alfred McDonald, lumberman, of Peterboro, Ont., is J. R. McDonald, who for a number of years has taken an active interest in the business and will continue to do so. The estate of Alfred McDonald has now been wound up and the business handed over to his family consisting of Mrs. McDonald and three sons, J. R., A. D. and C. McDonald. The firm will be known in the future as the Alfred McDonald Lumber Co. and its business policy will be along the same modern lines as in the past. The plant consists of a sawmill, shingle mill, planing mill, box factory and sash and door factory. The sawmill is not operating this summer as it was considered advisable last fall, in view of labor conditions, etc., not to go into the bush. The com-

pany are, however, putting in several camps this year and will bring out a considerable cut of red pine, white pine, hemlock and cedar. Mr. McDonald reports that Peterboro anticipates a very active building season next year and the winter activities of the firm will be along the line of preparing for the rush in 1920.

Fear Congestion of Canadian Timber

A trade correspondent of a London, Eng., journal, who has been investigating the congestion of the docks in London, cites a high official of the port as saying: "The one danger point is in regard to large timber consignments coming on Government account for housing scheme. A million tons are to come from Canada. If it is shipped in steamers that do not require deep water docks it will not matter so much, but otherwise it will need lighters to move it to places where it will have to be stored, and that will accentuate the shortage of general cargo vessels."

Another authority said: "Much space has been used of late for foodstuffs that was formerly used for timber. If all this timber is brought in ahead of the housing scheme for which it is intended and is not stored elsewhere, there will be a direct effect on the food storage accommodation, and that may easily affect food prices."

May Open Branch in Montreal

Frank F. Fish, secretary and treasurer of the National Hardwood Lumber Association, Chicago, has been on a visit to Montreal and Quebec, with a view of making arrangements for opening a branch of the Association in Montreal. It is proposed to open an office and to appoint an official bonded inspector on the same basis as in Toronto during the past six years. Mr. Fish, who also visited Toronto on his way to Montreal, was successful in securing additional members in Ontario and Quebec. The present membership in Canada numbers 35.

Vision of Great Future of the Coast

By C. S. Battle, Vancouver, B.C.

The Dominion of Canada is supposed to contain about one thousand billion feet of saw timber, of which amount British Columbia is credited with one-half, but I am of the opinion that the estimates made are incorrect. I believe that we have about three hundred and fifty billion feet of saw timber in this province. It sounds a big amount of timber, and at the present rate of cutting would last a long time, but we have hardly got started in the manufacture of lumber in British Columbia.

The eyes of the East and South are turning toward the Pacific Coast, and British Columbia will get more than her share for the reason that most of the timber is close to the salt water, and mills will be built and the lumber shipped to the uttermost parts of the earth. One big factor in the consumption of timber in British Columbia will be pulp mills. We have five pulp mills already in operation, and there is talk of several others being built within the near future.

Varieties of Timber

In the coast district we have fir, cedar, hemlock, balsam, spruce, and a limited amount of white pine, cottonwood and maple. Fir, of course, is put to more general use. We have hemlock as a good second, and speaking of hemlock will state that our Coast hemlock is almost as good as fir and cannot be compared with the eastern hemlock, which generally speaking has a bad name. British Columbia has almost the monopoly of cedar timber. You will find very little cedar in California, and while the state of Washington had a very heavy stand of cedar it is disappearing fast and British Columbia will be called upon to furnish shingles and cedar lumber for the greater part of the North American Continent.

While yellow cedar is limited in quantity, at the same time we have more of it than one would imagine. It is the highest priced timber grown in the United States and Canada, and there are several fortunes waiting for some progressive firm or individual who will study this wood and manufacture and specialize on same.

Market for Standing Timber

There has been very little demand for standing timber for the last five or six years, except for small tracts, handy to log, but with the marked increase in the lumber business and with the prospect of it keeping up for the next five years, the lumbermen are beginning to sit up and take notice.

You will find men of means either in person or by representatives in British Columbia looking over timber conditions. These parties come from Eastern Canada, from the Eastern States, Northern States, Southern States, and even from the Pacific coast states. As stated before, we are on the eve of a rapid advance in standing timber. One or two big deals will start the ball to roll and as we have a down hill grade I predict the timber business will continue to advance for a number of years.

We want Canadians to realize that this great western province is the richest in Canada insofar as its natural resources are concerned, and these resources are waiting for the man of vision with well directed energy and capital. Our neighbors across the line discovered this "promised land" a number of years ago and have invested a great deal of capital. "Now is the accepted time" to purchase timber.

New Plant Will Make Hardwood Lasts

York County, N. B., is to have a new industry, which is one of the first after the war developments by British capital in Eastern Canada. Official announcement has been made that H. Mobbs, of Kettering, England, has finally decided to locate a plant for the manufacture of hardwood lasts on Mullins Brook on the Transcontinental route of the Canadian National Railways.

Extensive lumber privileges have been arranged for by the new company, under an agreement with the Nashwaak Pulp & Paper Company, and it is expected that from three to four million feet of maple lumber will be manufactured annually into last blocks. The company will eventually manufacture furniture in their new plant.

Mr. Mobbs, who is one of the largest manufacturers of last blocks in the world, selected the site for the location of his new mill after investigating the various hardwood sections in New Brunswick. Not only is he satisfied that the hardwood supply on the Upper Nashwaak waters is unsurpassed anywhere, but he has been able to make what he considers a reasonable arrangement with the Nashwaak Pulp & Paper Company. Work of erecting the mill is now under way and it is expected to be in operation before long. It is expected that 200 people will be employed in the plant.

Millmen along the Miramichi River, N. B., have formed a union following a recent walk-out. A meeting of lumber manufacturers was held in the Fraser Company's office in Chatham. As a result the men were given a nine hour day instead of ten and are to receive the same wages as formerly.

The Camp School and What it is Carrying Out

Educational Work Among Lumberjacks Has Been Tried Thoroughly and Found to Measure Up to the Best That was Expected—Policy of the Future

By Raymond C. Dearle, M.A., Ph.D., Eastern Inspector, Frontier College

Alfred Fitzpatrick, Toronto, Supt., Reading Camp Association.

Once upon a time men laughed at the idea of night schools. It was visionary; it was impracticable; it was anything under the sun that has been said about every other idea that has been new to the time.

As a matter of fact one does not need to be a deep student of history to know that it required long years of effort to establish the principle that every child is not only entitled to an education but that it is to the interest of the state to insist that every child shall have an education. Having accepted this principle, our various provinces have built up educational systems, more or less imperfect perhaps, but still constantly tending toward improvement, despite their burden of officialdom and red tape. The night school was the logical outcome

of the day school. There were bound to be thousands of boys and girls, of young men and young women who must leave school prematurely by reason of circumstances and many of these demanded an opportunity to make use of their spare hours in the improvement of their minds and the furthering of their studies. The private business colleges were among the first to realize the fertility of this field.

Such institutions are necessarily operated from a dollars and cents view, no matter how high their academic standards may be; nevertheless, the fact that the number of these institutions has increased rapidly and is still increasing, offers positive proof, if proof be needed, that supplementary education as represented by the night school is every bit as necessary and justifiable as the primary education of our public schools. The official mind works slowly, to be sure, but in the course of time the need and the opportunity stood revealed to the educational authorities and free night classes became an established principle, at least in the larger centres of population.

The Cause of the Frontier Laborer

Now, what has all this to do with logging camps? Why should I occupy the time of you who read this article with a resume of facts with which you are all pretty well acquainted? Simply because I want to plead with you from an educational point of view the cause of the frontier laborer. Presumably the majority of you who read this can be put in the class labelled "Hard-Headed Business Men." You are accustomed to dealing with the frontier laborer as the representative of a class and that class pretty generally assumes to you the aspect of a bugbear. The frontiersman to you is an individual who is always demanding more money, always discontented, always "jumping" just when you need him most, in short, his chief purpose in life seems to be to bring grey hairs to the head of the man who employs him. Still, he is very useful to you when it comes to figuring that very tangible thing called production.

I do not need to quote figures to you—you know, or ought to know, how many million feet of lumber were cut in Canada last year, how much of it was exported and what was its value in dollars and cents. You may know too, the productive value of the mines in Canada and earning power of the railroads. And yet all this would be impossible without the aid of that class represented by the frontier laborer—the man who swings an axe and pulls a saw in the bush, who delves into the bowels of the earth for our precious ores, and who labors in the rock-cut and muskeg to build our railways.

The Human Side of the Problem

Now I am not a socialist and have no socialistic iron to heat at your fire. I want merely to present to you something of the human aspect of that frontier laborer, to enlist your sympathies for a movement which may tend to bring about a better understanding on both sides. And this is where I come back to the beginning of my story and start afresh on the subject of night schools. It is the question

of supplementary education for the men in the camps that I want to discuss with you. If we take for granted that night schools are an excellent thing to have for one portion of our country, is there any logical reason for saying that the other parts should not have them as well? Why should we offer educational facilities to one section of our population and refuse them to another? Why assume that individuals in cities and towns have the desire and ambition to improve themselves intellectually while individuals of identically the same race and nationality in the rural communities and in the backwoods have no such desire or ambition? I will defy any person to produce an argument in favor of such a distinction that will stand the test of logic. Is there anyone who doubts but that the man who spends his days in the forest or mine actually produces more wealth for the state than the young girl operating a typewriter in an office. Has not the former the right then to ask that the state shall spend at least as much money in providing him with educational facilities as it spends in providing such facilities for the latter?

In principle then, we must accept the idea of frontier education; in practice, I will admit, different circumstances must demand different methods. The difference however, is more apparent than real, as anyone may easily ascertain by going into a camp community and living with the men as one of themselves. In all of my various experiences in camp-life gathered from a great many different kinds of camps I have always found the men essentially the same as a group of men in the city. If there is any difference as regards moral standards and intellectual capacity I will take my chances with the men in the camp.

Basic Policy Regarding the Foreigner

I know, of course, that someone will object that these arguments are of no use because of the great number of foreigners in the camps. But we have equally large numbers of foreigners in the cities. More than that, we have in such communities special night classes which cater to the foreign element. Why not do the same in the camps? As a matter of fact, the presence of the foreigners in our frontier camps in such large numbers is an argument in favor of camp education, not against it. For it is high time that we should take advantage of the present slackness in foreign immigration to formulate some more definite policy with regard to these people. Sooner or later we must realize, I hope we are realizing it, that we cannot go on filling up our country with men of alien birth unless we attach some definite conditions to the privilege of landing on our shores. A basic principle of these conditions should be compulsory attendance at some sort of night school for the purpose of learning to read and write English and for a fundamental training in Canadian citizenship—its privileges and its obligations. The folly of allowing foreign-born men and women to enter our country and build up their own communities which are not nor never will be Canadian in either principle or practice, has been pretty well demonstrated by reason of late events. If we were to lay some sort of obligatory education upon the incoming alien with the penalty of deportation for non-compliance, one of our national problems would be simplified, if not completely solved. Hence another argument in favor of camp education.

Mr. Fitzpatrick Saw the Great Need

For upwards of nineteen years the Reading Camp Association has been carrying on a series of experiments along these lines, working in all the varied forms of frontier camps and over the whole extent of country from Atlantic to Pacific. The idea originated with Mr. Alfred Fitzpatrick, a graduate of Queen's University, who originally fancied himself for the Presbyterian ministry but later saw a crying need among his fellow-men in the camps and proceeded to answer that need to the best of his ability. Through Mr. Fitzpatrick's efforts the Reading Camp Association came into existence supported solely by a sublime faith in his ability to make people see the need and the opportunity as he saw it. In the face of circumstances that were at times almost heartbreaking the work has been financed through public subscriptions.

One by one the various governments, with the exception of Prince Edward Island, have been compelled to take notice of the work that was being done and an annual grant now comes through their educational departments. Even with this semi-official encouragement the bulk of the financial burden is carried only through the gener-

osity of private individuals. During this last spring it was thought advisable to emphasize the educational aims of the association and to this end a charter was secured under the name of the Frontier College. This name expresses admirably the underlying idea of its founder and present principal. It exists for the sole purpose of carrying education to the frontiersman, be he native-born or foreign. Unless you totally lack for imagination you must be thrilled by the audacity and boldness of such a scheme. What other college has such opportunities before it, such an extensive field from which to draw its students? The only regret is that with the present limited revenue only about sixty or seventy camps can be reached in one year.

Qualifications of the Teaching Staff

Now every well regulated college is provided with a staff of teachers, and the staff of the Frontier College is as unique as is the organization itself. Except under very unusual circumstances only university graduates or undergraduates are chosen and these are hand picked from the different universities of the Dominion. In choosing the instructors, as they are called, emphasis is, of course, laid upon a man's scholastic attainments, but more important still is his moral and physical stamina. The would-be instructor must above all else be filled with an abundance of real grit for his is to be no soft job. It was Mr. Fitzpatrick's idea from the first that if an instructor is to be of any use to his men he must understand their point of view. Consequently he takes his place with them in their daily labors—works with them, eats with them and sleeps with them. Only during the evenings does he become an instructor of the Frontier College, and even then his attitude is not so much that of a master to a pupil but rather of a chap who has struck it lucky, sharing up with his less fortunate fellows. No favors are asked and usually few are granted; occasionally an instructor does office work but not ordinarily. Sometimes the hard going proves too much for the young chap and he quits but on the whole it can be said that no finer body of young men could be gathered together anywhere than those who have made up the active teaching staff of the Frontier College.

Now that the organization has received formal incorporation greater stress than ever will be laid upon the educational side of the work. It will still be the policy of the Frontier College to provide daily newspapers and attractive reading material in the way of books and magazines. Also, during this summer an attempt has been made in some camps to provide athletic features, and this might be extended in some measures to the winter camps. However, that is not the main purpose for which the instructors are sent into the bush. These attractions may be used to draw the men but the evening classes are more than ever the strongest feature of reading camp work. Every instructor now signs an agreement to teach a minimum of ten hours a week which averages two hours a night for five nights. Saturday night is usually reserved for something special in the way of concert or entertainment, if possible Sunday is set apart for reading and writing letters, accommodation for the latter being provided in the reading room.

Co-operation and Support of Lumbermen

Naturally, the success or failure of any camp school must depend upon several factors, as for instance, the character of the men employed in the camp and the calibre of the instructor. But very important also is the need for co-operation on the part of the foreman or superintendent, and his attitude is generally a mere reflection of the views of his employer. Consequently my appeal is to the employers to lend their assistance and moral support wherever they come in contact with this work. And surely, of all men, the lumbermen of Canada have the very best opportunity to show their good-will, for in no other class of camps is the opportunity as great. Through the depths of the winter there is no possibility of long hours of overtime such as we meet with in the railroad camps; here the evenings are free, even if the men do retire very early. Then too the woodman as a rule comes of a sturdy stock with intelligence something above that of the average laborer, so that if camp education is to be a success anywhere it has its best chance in the lumber camps. Most employers are now quite willing to open their doors to this work but some opposition is still encountered. It is worth noting however, that some who were most sceptical at first are now among the most enthusiastic backers of camp education. But as I stated above, the field is too big to be covered with a limited income and direct government action is longed for. Camp education is not an experiment; it has been tried thoroughly and found to measure up fully to the best that was said of it. There is only one thing lacking and that is that there is not enough of it.

The Clark Picnic Was a Hummer

The annual picnic of A. R. Clarke & Co., of Toronto, who are extensive manufacturers of lumbermen's clothing and have built up

The magnificent harbor of St. John, N.B., recently visited by the Prince of Wales

a business from Coast to Coast in this line producing everything from moccasins to mackinaws, was held recently to Wabasso Park, Hamilton. The day was proclaimed a general holiday for everyone in the large establishment and all employees were given full pay and provided with free transportation and an excellent lunch on the grounds. In the case of married folks tickets for the ladies and children up to 12 years of age were presented. There was not a dull moment during the whole of the proceedings and the 29 sporting events were keenly contested. The trip from Toronto to the park and return was made on the "Corona." Mr. Griffith B. Clarke, president of the company, who is an enthusiastic motor boat devotee, treated the passengers to some thrills. He circled around the large steamer with the result that the people rushed from one side to the other in order to get a passing glance at the "Leopard." The 20th Bat. band furnished delightful music during the afternoon and the associations of the day will long be remembered for the brightness, pleasure and friendly spirit that prevailed. Mr. Griffith B. Clarke is exceptionally popular with all the employees and the result is that every man and woman in the establishment works with the company rather than for it.

The judges of the different events during the day were: J. Ross, sales manager, glove and clothing departments; J. Andrews, foreman of Japan department (who had a great day seeing his boys clean up most of the prizes); R. Watson, glove leather dept., and H. Symonds, glove dept. The Main Committee, who worked hard to make this picnic a big success, was as follows: Chairman, Griffith B. Clarke, president of the company; J. G. Hoult, supt. of factory; C. A. Upper, accountant; H. A. Sailer, sales manager, patent leather dept.; Alf Collins, secretary.

The many friends of Mr. Clarke will extend congratulations on his recent marriage which took place at St. Mark's Rectory, Niagara-on-the-lake, his bride being Miss Kathleen Smith, only daughter of Mr. and Mrs. J. Norman Smith, of Montreal. Mr. and Mrs. Clarke left for a motor boat trip and since their return have taken up their residence in Toronto.

Some fine Nova Scotia timber being hauled to the mill

"Necessity and Importance of The Retailer"

E. M. Trowern, Secretary of Dominion Board, R.M.A., Ottawa, Outlines Work and Worth of Merchants in Great Economic Plan of Sales and Distribution

Although the question of the increased cost of merchandise and the cost of distribution at retail may not be considered by your committee to properly come under the public enquiry that has been allotted to you to report upon, yet we feel that it is so closely related to the subject you have under consideration that we are taking the liberty of presenting to you a few facts on the subject of retail distribution as we see them, standing, as we do, between the producer, the manufacturer and the workman on the one hand, and the consumer on the other. So much has been said about the conditions of the producer and the manufacturer, and what is termed, for the sake of a better classification, the "working classes," and so little has been said about what is known as the distributing classes, that the whole subject has become confused and misunderstood.

It is not generally known that there are many more millions of dollars invested in distribution than there are in either manufacture or production. It could not be but otherwise; merchandise must always be manufactured ahead of the immediate demand. Goods produced or manufactured in Vancouver are of no value to people residing in Halifax unless they are transported to the latter point. To do this, it requires negotiation, purchase, transportation, warehouse facilities, retail facilities, etc., and final delivery to the ultimate purchaser in single items. A host of transactions take place before the goods are finally delivered. All these separate transactions cost money, and take time and intelligence, in addition to "capital," which cannot be regarded in any other light than "accumulated industry."

We are quite aware that arguments have been put forth for centuries, striving to discover some plan whereby goods produced or manufactured can be handed direct to the consumer, and to have the middleman—which means either the wholesaler or the retailer—removed. All efforts in this direction have been failures, and they always will be failures, because the present system has been a natural development that has grown out of actual necessity.

Value of Retail to the Community

The value of the land and buildings upon which retail stores are situated, together with the value of the wholesale properties, exceeds in value, and is more highly assessed than any other property in any municipality. Add the value of all the retail property in Canada together, couple with it the value of the stocks which are held waiting, ready and near at hand for the convenience of those who want the goods, and then add the value of all the wholesale property and merchandise to the retail property, and you have a volume of wealth that far exceeds the value of all our farming and manufacturing industries. This costly and expensive system exists because it is required and because there is no other legitimate system that can take the place of it. It has been found to be the most economic, convenient and elastic system that can be provided, and it has developed through necessity and experience. There is no practical proposal or scheme in sight that can take the place of our present system of distribution. It requires adjusting here and trimming there, but the underlying principles cannot be abolished. We are anxious to go on and develop it and make it more complete and convenient. This can only be attempted by those who practically understand the principles which guide and direct it. No improvement can come from any other source.

All attempts that have been made by those who operate "Co-operative Societies" in any part of the world have proved to be nothing more than the old scheme of one merchant endeavoring to outwit his competitor by trying to tell the public that his goods and his system are far superior to those of his neighbor, whereas the so-called Co-operative Society system is clumsy in its operations, inferior in its service, and its method of handing back so-called dividends or bribes to its customers has all the deceptive elements of the trading stamp scheme.

The Disadvantages of Certain Methods

To those who are not acquainted with the problem of retail merchandising, and from the manner in which some of these Co-operative societies advertise themselves, and their supposed superior methods, it is not surprising that those who are unfamiliar with the "tricks of trade" see some virtue in their proposals, but those who are anxious to have all trade transactions based upon a sound, healthy, moral basis, know full well that any system of merchandising

that is based upon the placing of a higher price on any article to a customer, and then handing the increased price back as a bonus or a dividend or a bribe to secure and hold the trade, by or through any pretext whatsoever, is wrong in principle and commercially unsound. It is for this reason that reputable and honorable retail merchants will have nothing to do with business methods of that character.

If the claims put forth by these so-called Co-operative Societies were true, and the principles upon which they are founded were correct, every one conducting a retail store would adopt the same system, but the co-operative system is not adopted because the principles upon which they are founded are commercially unsound, and their methods can never appeal to those retail merchants who want to see the retail trade of Canada placed upon a higher plane.

Believing, therefore, that we, as retail distributors, are an absolute necessity, and that our services cannot be dispensed with, we feel that we have an important duty to perform in every community throughout Canada, and we further believe that owing to our financial position, our absolute necessity, and our numerical strength in every city and town and village throughout Canada, that no question affecting what is termed the "working classes" or the "manufacturers" or "producers" can be intelligently considered without taking the great problem of distribution into consideration as well.

Their Place and Service Outlined

Retail merchants stand in a very unique position in every community. They reach out and take the goods from the producer and manufacturer and hand them to the consumer. Every increase that is made to an article, whether it is through increased wages, the increased cost of raw materials, increased transportation, increased rent or the increased overhead expenses of every class through whose hands any product passes, is collected again by the retail merchant from the consumer. The higher wages go, the higher will go the prices of the articles created by the wage earners. The circle is complete and no system of reasoning can alter this truth. The law of supply and demand is the basic law upon which everything is founded. The dearer goods are the less profit the retail merchant makes, as the demand is lessened, and his business turnover is, therefore, less.

In order that workmen may be able to purchase all those things that are necessary for their actual comfort, they must receive a salary more than equal to the value of the actual things required so as to enable them to lay aside sufficient for old age, etc. If wages keep climbing up, merchandise will go on climbing up, and there is no scheme that can be proposed that will prevent it. If wages climb higher on one class of goods than they do on others, the workmen will be limited to fewer classes of goods and their comfort will be affected thereby. If, for instance, a working man received twenty-five dollars a week, and with that sum he could pay his rent, buy groceries, meat, fuel, light, clothing, boots and other actual necessities, and his rent was doubled, he would be compelled to forego purchasing some of the other articles of necessity, and, having to do without these necessities, he would immediately become discontented. On the other hand, whatever necessities he economized on, it would injure the retail merchant who handled those lines, and he, in turn, would have to undergo the same weeding-out process as that undertaken by the wage earner.

Interest of One, Interest of All

These simple illustrations are made for the purpose of showing how closely the affairs of every community are inter-related, and whenever one class is affected all classes are affected.

Our purpose in submitting these brief views on the problem of retail distribution, which is one of the most difficult problems for those who have had no practical experience in it to understand, is to point out that there is more capital invested, and more people employed in distribution, than there is in production and manufacture combined, and that, in our opinion, no plan, no scheme and no device that can be suggested can ever alter it unless we turn our plan of civilization backward and all begin again to be tillers of the soil and makers of the things we use and require. No one would be satisfied to go back again to the simple life of making our own candles, and using flint instead of matches, and using a spinning wheel to make clothing out of sheeps' wool. We have experienced

life's comforts and we want them, and if we want them and must have them, we must pay for them. A meal provided in a million dollar hotel will always cost more than a meal provided in a tent. There is a price ticket on everything. The best things cost the most, and if we desire them we must be prepared to pay for them or go without them.

To properly consider the subject we have before us, we must take conditions as we find them to-day, and not as they were a century or two ago. To-day we have public school systems all over the world. Boys and girls, and men and women, have been educated to try and think. In every sphere of activity we see development. We find improved machinery in all lines of manufacture and production. We have labor-saving devices and we have transportation facilities that are unequalled in any age of the world. We have new devices for transportation, such as automobiles, automobile trucks, aeroplanes, bicycles, etc. In electric power and electrical devices we are in advance of anything in the history of the world. In telephones, telegraphs and cables, our advances are phenomenal, and all this with the many other new inventions such as gramophones, etc., which can produce the human voice, all these things have been brought about by those who have been educated to think, to diagnose, to investigate and to study.

Wrong Thinking and False Principles

It is said that a little learning is a dangerous thing. In many cases this has proved to be true. Not having had practical experience and an opportunity of giving any study to the great problem of distribution, the rock upon which thousands and thousands of persons engaged in other walks of life become shipwrecked is where they venture out upon its dangerous surface. These persons who have not had a proper commercial training advocate, among other things, the following:—

1. The abolition of the middleman.
2. Direct purchase and sale between producers and consumers.
3. Municipal trading in coal, wood, milk and other articles of common use.
4. Public retail markets to enter into competition with tax-paying retail merchants, who carry vegetables all the year round, whereas consumers cannot buy vegetables in the market when the temperature is below freezing point.
5. Without knowing the unsound, commercial basis upon which so-called "Co-operative Societies" are established, they advocate their adoption.

In our opinion, it is wrong thinking of this character that lies at the root of our present troubles and unrest to-day. The remedy for this false thinking lies at the door of the retail merchants themselves. Believing, as we do, that no intelligent system on earth can be devised to abolish the retail merchant, or whereby all means of retail distribution can be operated entirely by the State, and that all men must have the right to develop their own lives as they deem best for themselves, without injury or interference with the rights of others, it is our duty to make our claims known.

We wish, therefore, to repeat again that the most difficult problem of all problems for the average student of political economy to understand is that of the distribution of merchandise at retail. It has puzzled wise men before corn was sold in Egypt, and it will puzzle wise men and social economists until the crack of doom. Retail merchants have been on earth for centuries, and they will be here for all time. You can devise no plan that will abolish them because they are an important and essential part of every community. They comprise the active, independent and free men of every municipality. Their chief desire is to be allowed to do their business on a sound, business basis, and their chief enemy is municipal and legislative restrictions that are proposed to be placed upon them by those who do not understand the simplest principles of buying and selling.

The Great Problem of Distribution

As to the labor troubles of retail merchants, they have very few. Most of their clerks are their friends. A young man who enters behind the counter of the average retail merchant's store must take an interest in the business. He must be pleasant and agreeable with the customers of the store. The proprietor knows his habits, knows his Christian name, he calls him Bill or Bob, and he interests himself in his work, and encourages him to develop his character. It has often been said, and we have never heard it disputed, that the best business college in the world for a young man to enter is behind the counter of an honest retail merchant.

A retail merchant who places his name over his door, and who is always before the public, has a stake in the community, and his influence is for good and not for evil. Strikes, lock-outs and hold-ups are never heard of in ninety-seven per cent. of the retail stores in Canada, nor will they ever be heard of because each store has its own plan of paying wages or giving commissions on profits, or giving bonuses or increasing salaries according to the ability of the

clerk to earn. No system of paying all clerks the same salary, even in the same class of trade, could ever be adopted, because the clerks themselves would object to it. The principle that exists, and which always will exist, is to pay clerks according to their worth to the firm. This is the only fair system and the only one that will give them an incentive and an ambition to some day become their own masters. In Canada to-day, every young man who is ambitious and who is willing to devote his time and thought to the business of his employer in the retail trade can find an opportunity of advancing to the highest position in the store, or becoming a partner, or eventually entering into business for himself. The first thing, however, that must be done, and for this reason, chiefly, we are submitting this article, is to impress upon the public mind that the man behind the counter is performing equally as useful and important work in the community as the man behind the lathe or the man behind the plow.

As retail merchants, in the past we have been too docile and too unconscious of our own importance in the community, and we have allowed all sorts of reports to be circulated by those who know nothing about the problem of distribution, being of the opinion that the public would not believe the statements made. In the future we hope to remedy this condition by taking our proper place in the community and insisting upon equal recognition with all other kinds of useful employment. As stated before, we occupy the most important position in the life of every well ordered community. We are here because we are required, and we will be here for all time, and there is no other system of distribution that can supplant us.

For this reason, if for none other, the Dominion Government must recognize that it is essential that no unfair or discriminatory legislation should be passed that will hamper our progress or interfere with our rights as free citizens. At the present time we welcome the opportunity to be able to lay before the special committee of the House of Commons, which has been appointed to investigate the cost of living, all the facts concerning the retail trade that we have in our possession, as we feel that the more we make our condition public the more the public will respect and appreciate us.

Currency and Measurements Used in Export Markets

British and Foreign currencies and measures of length with their Canadian equivalent are as follows:—

Country	Monetary Unit	Canadian Equivalent	Measure of Length	Canadian Equivalent
United Kingdom	Pound or sovereign	\$4.86 2/3	Same as Canadian	
British Possessions, viz:—	creign.			
Antigua				
Australian Commonwealth	Pound	4.86 2/3	Same as Canadian

			Sajene = 3 arshins.. 7 ft.	
			Arshin=16 vershoks 28 inches.	
			Russian inch	English Inch.

Note.—The average value of the Haikwan Tael for 1908 was 65 cents; 1909, 66 cents; 1910, 69 cents; 1911, 65 cents, and for 1912, 74 cents.

†The values in Chinese Imperial Customs Returns are always given in Haikwan taels, which are relatively in value equal to about 1.113 Shanghai taels. The tael is in reality not a standard of value (there is no such coin), but of weight, and when used in the sense of a value it only represents its weight in gold or silver, as the case may be. The real difficulty is to establish its exact equivalent in grains.

From "Camboose" to Phonographs and Music

Camp Life and Associations in Ottawa Valley of Twenty Years Ago and Today— With Improvements There Has Been Steady Decline in Efficiency

By Everett Andrew, Ottawa, Ont

Improved sanitation, shorter working hours, more congenial laboring conditions, and, last but by no means least, a greater variety of food, coupled with considerable alterations to buildings and the camp layout, can be safely cited as instances, if anyone asks the question "How much have the woods camps changed in the Ottawa Valley in the last twenty years?"

Opinion, in some instances, differs as to whether today's camp is as good, as profitable and as satisfactory to the men, and the system of ventilation in the sleeping quarters is a healthful as in the olden days? Then again there are tendencies that point toward the gradual elimination of the famous picturesqueness of the old camp life.

This latter phase must not be reckoned in the terms of "today or tomorrow," for like the growth of the oak from the acorn it takes place steadily though gradually. More modern standards of civilization are being advanced and looked up to as time passes. Today in some camps there are phonographs, electric lights, telephones, with here and there gasoline apparatus. All of these inventions would have been looked upon with a certain amount of awe or suspicion by the grandfathers or pioneer lumberjacks of the valley, whose primary object in camp life then was to get out "big sticks" and "go down" on the drive.

Now comes the advent of the aeroplane as a means of forest patrol. Truly a newly developed protector to the forests brought about by the war, and as many decades ago described by Lord Alfred Tennyson as:

"The nations airy navies hurling down their ghastly dew."

Educational fire prevention propaganda is also helping greatly in and out of the camps to destroy "fire", the greatest enemy of lumbermen and their woodland tracts and berths.

Watch towers though many of them are still in existence and capably fulfilling the limited functions for which they were erected, are it seems gradually "passing out."

The efficiency of woods labor as rated on the output of so much per man, per day, has considerably fallen away. Some estimates are that the woodman of today only does from sixty to seventy per cent. so far as production goes as his predecessor of twenty or forty years ago. Consequently more hands have to be employed.

Regarding ventilation and sanitation as at present practised in the camps several of the old time lumbermen point to the serious influenza epidemic which swept over the camps last fall and winter. Some of them maintain that if the old "square" had been in the roof instead of the "stuffed up barrel" that the germs of the epidemic would not have spread through the camp so rapidly and there would have been fewer serious cases. Smallpox, on the other hand, which with vermin was the scourge of the lumbering camps for many years, has of late almost passed into oblivion.

Taken all around there is room for debate as to the old and new time camp; a brief history of and description of the lumbering camp of twenty years ago and today is as follows:

Two decades or so ago the woodsman before he arrived in camp had a pretty good mental bird's eye view of what the place was going to look like, and what he could expect to find there. Camps in those days were pretty much the same—and had been generally so, so far as appearance went for two score years before or more.

The woods domiciles of the lumbermen were then known as "camboose" camps, with walls constructed of round logs with the chinks between filled in with moss. The roof which today is almost an interesting relic of the past, was made with small sapling with the heart hollowed out, and inverted every second space to shed the rain. A most capable and efficient roof it proved.

Not the least of the peculiarities about the roof of the "camboose" camp, which any old lumbermen today well remembers and don't forget to talk about, was the "smoke-hole" or "the flue." This was usually a square opening in the roof from which day and night emanated, if the wind were in the right direction, all and sundry of the variegated odors from the cook's diligent operations, and such other scents, smells or perfumes as may have been created by one cause or another.

Then there was the other aspect of the "smoke hole." While it let the heat and whatever else was in the "camboose" out it also let the rain, snow and the atmospheric elements in. Of this latter the "old timers" do not now complain. The ventilation from the "flue" was better they believe than the "holes bored in the barrel."

The interior of the "camboose" showed the cook's stove and his utensils, and the wooden bunks ranged two tier deep much as they are today. The bunks, of course, were wooden, and upon them a mattress of balsam bows was placed. There were two men in a bunk. The resting places surrounded the cook's fire in the centre of the dwelling.

Keeping Up Production and Morale

Napoleon once said an army travelled on its stomach, and as applicable to the woods camp and its workers, there are many grains of truth in the remark, for nowhere perhaps is wholesome nourishing well-cooked food more needed than in the woods camp if the production aimed at is to be attained and the morale of the men kept up. Thus the cook of the "camboose" though he may not have been as well liked then on account of the smoke from his cooking fire and the odors of his viands being prevalent within the sleeping quarters, was an indispensable unit to the workers, just as he is today. He baked his bread then in the hot sand around his open fire in the centre of the dwelling and excellent and evenly "done" bread it was too. Of

course, he didn't pour the dough into the sand but placed it in large metal pans which were covered over.

When the "eats" were ready the men assembled around a large pot for soup and each man helped himself, choosing such morsals from the general bowl as he could fortunately secure. Sometimes the bigger fellows got the tit-bits and the wee lad or the newcomer more than once went wanting.

After the tin vessels were loaded (some only partially loaded) the men hied themselves to three legged stools, held their tin plates on their lap or knees and figuratively "went to it." The standard ethics of etiquette prevailing as tradition has handed it down, were: get there first, grab the best bits, and get away with them as fast as you can. Nobody worried whether bouillon cups or soup plates were used, or whether some greedy soul drank his soup or sipped it from his spoon. Five o'clock tea was never poured except on the shortest and dullest of winter-evenings (if the men reached camp by that time)—and then man and not the cook or his assistant attended to that function himself.

The food supplied in the days of the old time camp consisted almost wholly of the following bill of fare: pork, potatoes, beans, and flour. Sugar and soap were in the camp but were sold to the men instead of being supplied gratis.

How Food Costs Have Aviated

The cost of food supplies then as compared with present day prices provides an interesting table for all lumbermen.

Commodity	Prior to 1900	Present day	Increase %
Pork per bbl.	\$10.00	\$60.00	500
Beans per bush.	1.25	5.00	300
Potatoes per bag75	2.00	166 2/3
Flour per bbl.	4.00	12.00	200%
Tea per lb.14	.40	185%
Sugar per lb.	3 1/2	.11	214%

In addition in most camps of the Ottawa Valley sugar and soap are now supplied gratis. Work for the men began at daybreak and ended at dark. "Starting" didn't mean getting out of your bunk, but having the axes to work on a tree with first streaks of dawn, after perhaps the men had already travelled two or three miles from the camp to be at "work."

Away back in the golden age when square timber manufacture was a profitable enterprise, there were usually two kinds of camps. One for the square timber and the other for the "waney." Most of

Pen and ink sketch, showing the layout and location of buildings in a Quebec logging centre

the square timber from upper part of the Valley was cribbed and rafted over the Chaudiere slides at Ottawa, and down the Ottawa River to Quebec.

Here much of the picturesqueness of lumbering life came in with the logs down the "rollway" on the shore of river or lake. The "drivers" from the headwaters or the "starting point" as the case may have been, adopted more or less a "sang froid" attitude and "set" themselves for the long trip to the waters below the "Plains of Abraham."

The "rollway" then was pretty much as it is today, built on the side of a hill or slope which before hand has been carefully cleared of obstruction. At the head of it the logs were piled so they might easily roll down in the spring. Before the logs got to the rollway the head "swamper" or the "roadmaker" had penetrated into the forest as the "lumberjacks advanced."

The Various Duties of the Gang

The "gang" of workers ranged anywhere from twenty to eighty hands, and the bush superintendent (a man usually of many affairs and of wondrous capacity and energy) drove in all kinds of weather from one camp to another to make sure that everything was keeping up and learn of the fluctuating conditions. The result of a day's operations was usually recorded by the gang foreman on a rough slate or a shingle.

Besides the cook and his assistant the "carpenters," "head teamster" and "sleigh tender" were important functionaries. The "hewer" and the scorer" also figured largely in the operations before the "stick" was taken out.

Such a gang with half a score or a dozen horses and sleds would usually bring out from four to five thousand sawlogs within the period of a season. To haul some of the heavy pieces of timber through the bush from ten to twelve horses were required. Rollers or skids were often placed under them to lessen the friction.

"Snubbing" and other practices so well known to lumbermen as not to need mention were practiced then pretty much as they are today.

Perhaps one of the best descriptions of early logging life is presented by a few paragraphs in "Picturesque Canada," edited by Principal Grant of Queen's University, in its edition on lumbering entered under the copyright act of 1875. Pages 222-23 of Serial No. 9 describes old camp life as follows:

"The road to the landing is often far from level; when the descent is dangerously steep, what is called a gallery road, is constructed by driving piles into the hillside and excavating earth, which is thrown on the artificial terrace thus carried around the face of the hill. Down this the merry sleigh driver descends safely with incredible speed; above him the steep—beneath the precipice from which the wall of piles, logs, and earth secures him.

"When the descent is still steeper and that of the 'gallery road,' snubbing is practised. This consists in securing a rope at one end to the sleigh and at the other to a tree at the top of a hill, whence it is paid out slowly as the tree descends. The logs at the landing are marked on the end with the trademark of the owner; also with another mark indicating their value.

"The gang works from dawn till dark with an interval for dinner. This is often brought to them ready cooked in the woods. The men sit round a fire, over which boils the fragrant tea. They despise milk and sugar, but the tea must be strong. After dinner and a few minutes smoking, work is resumed; the axe swings, the saw is plied, teams drive their loads to the landing until after sunset, when they are driven back and the weary horses are stabled and fed. Then after a hasty wash the men enter the shanty, where, close to the central fire, is a boiler full of strong tea, fresh made, flanked by a huge pan full of fat pork, fried and floating in gravy. There is also a dish equally large, of cold pork. On a corner shelf is a mammoth loaf of bread, than which all Canada can provide no better, with a large knife and a pile of basins stacked together. With admirable unanimity of purpose the men, one after another, select a pint basin and a huge slice of the hot, fresh bread." Passing to the camboose they fill their basins with hot tea, and secure as much of hot or cold pork as they desire. Then seated on benches beside the fire, each with the help of his caseknife discuss the pork and bread, washing the solids down with copious draughts of tea. The only light is that of the camboose fire, gleaming on swart figures and stalwart forms and reflected from the tin vessels in their hands."

Many Conflicts Between Nationalities

In the olden days as is the majority of cases today, the most of the lumberjacks were of French extraction. Many of them had Indian blood in their veins and some were the converts of Jesuit missionaries. The priest of the church came about once per season and carried with him a portable altar. After being received in camp with reverence by his co-religionists and with respect by all he heard confessions which, in many instances, lasted far into the night. Next morning the celebration of mass took place.

In the Ottawa Valley the remainder of the bushmen who were not of French extraction were Scottish Highlanders, descendants of Glengarry Scots. Then there was a good sprinkling of the sons of the land of Erin. Many a conflict in the woods for one reason or another took place between the creeds and nationalities, finally resulting in the separation of camps in which each was housed or what might be termed today a mode of "segregation."

Saturday night, if someone in charge did not lose track of the calendar, was the big night of the week. "Big" didn't mean what it means in a city, a summer resort, or the now decadent Ontario "water-in" places.

Axes were whetted, repairs to equipment made, mayhap a dance was on or a fiddler appeared. Such was the camp life of the old time lumberman, and by way of diversion or sport he looked forward to the spring when impromptu log rolling-contests requiring both strength and skill were staged, before and on the drive.

The Twentieth Century Camp

Now in the trend of present day events and in the establishment of a new order of things, a great deal has been changed. The buildings of the camp are different, very much so. Instead of the old cam-

boose one now sees an almost scientifically arranged structure worked out and erected on the basis of so much space per man.

A modern woods camp today has its hospital, its recreation rooms, school houses in a few instances are fostered by the pulp and paper mills. The era of modernism, civilization, and last but by no means least education, and diversion from physical effort, coupled with sanitary and religious principles are steadily creeping into camp life.

In accordance with provincial legislation stables have to be situated a certain distance from the sleeping quarters of the men's or the cook's camp. The drinking water supply is practically under the supervision of the Provincial Board of Health who secured its authority for health regulation within the last ten years.

In short the woods camp be it situated in the Ottawa Valley today as regards sanitation, has virtually to meet with the approval of the Provincial Board of Health. There are also pretty much restrictions as to the size of the buildings, the number of men they may house, and generally supervision of the layout of the whole camp from a sanitation standpoint.

Another new point which is insisted upon by the department is that a doctor has to attend the camp at least once a month and has to be within reasonable call in the event of sickness, epidemic breaking out or serious accident occurring.

In the construction of the new camp buildings, the walls are largely built of logs as formerly, but the roof instead of being the inverted sapling is of sawn lumber usually covered over with tar papers or other manufactured roofing material. A regular box stove and not the cook's fire heats the abode and there is a regular chimney which usually consists of a stove or galvanized iron pipe protruding through the roof.

Sticking a Shirt in the Barrel

Ventilation in most cases is obtained by cutting openings in the roof and placing barrels up-side-down over them. In the "head" or uppermost part of the barrel auger holes are bored. Not infrequently on a draughty or chilly night some enterprising soul sticks a shirt in the barrel which cuts off draught from his particular person and at the same time impedes the ventilation for the rest of the men.

The arrangement of the bunks remains pretty much the same as in the old time "shanty;" only now instead of being of wood they are of metal. And instead of the fragrant and healthful odor from the old time balsam bows, the "jack" sleeps on a "tick" which is filled with straw or dried grass or a wire spring mattress. Even with these precautions aimed at the extermination of vermin, it is necessary to "disinfect" the camp.

The cook has a separate camp and cooks on a standard or regular cooking range and no longer, unless in some dire emergency, does he bake his bread in the sand. Considerable improvements for feeding the men have been made. Instead of each one picking out what he wanted from the big pot of the old days, the men sit down at a long table with seats on either side on which the food is placed, and at which dishes have been set. Such courses as soup are brought to them from the kitchen, the camp chore boys serving as waiters at meal time. Thus everyone gets a share of what is going and the distribution of "tit-bits" is a great deal more equitable. The list of camp supplies has undergone a considerable change and the bill of fare is now quite an extended one. The quality and variety of food has been much diversified. The following is a standard list of what the men now get in most of the camps of the Ottawa Valley:

Free sugar, free soap, beef in large quantities, bacon, cereals, beans, preserves, fruits, apples, prunes, raisins, jam, cakes, pies, syrup, molasses. In some camps condensed milk is provided from time to time.

The modern practise in most of the camps is to diversify the diet to the greatest possible extent. Such a practise it has been found has worked out in better satisfying the men, and last but by no means least, at present prices it is also cheaper. Pork, for instance, is now cited by lumbermen as being one of the dearest commodities on the food market. Thus to feed men pork as in the old days, would figuratively cost the operator a mint of money, and send his production costs away up.

Today, as in the past, the majority of the woodsmen in the Valley are native French-Canadians. The Glengarry Scotch is disappearing and the Irish log makers are becoming few. Though the war had considerable to do with the departure of the Scotch and Irish from the lumbering camps, it was not the main cause for diversion, as even before the war the sons of these two races had shown an inclination to quit the woods and follow other occupations or lines of industry.

Their Heart Not in Their Work

The places they have vacated before the war and during the war, and are being filled with that which is commonly termed in the woods as "foreign" labor, and with little consideration generally clas-

sified as "Polacks." Broadly speaking as compared with the old days they are "fair" workers. In a general way on this phase it is a question if the heart of all of them is in their work. As one of wide experience put it, some of them are working to get a stake to go home with, others are content to plod along and live, but rarely is there one of them who displays ambition or initiative to go ahead and overcome the varied obstacles of lumbering life and master it.

Another improvement that has come to camp conditions is in the lighting. In a very few camps electric light is the means of illumination, but at several others the acetylene process is being extensively used as against the system in days gone by, that of lanterns, the pine torch, or in individual instances, the candle.

The mode and method of transporting men from the city to the camps has undergone a considerable change in most instances. With the building of railways before the war it was the custom to put the steel in as far as possible and make the hike or tramp or portage into the woods for the men as short as could be. Sometimes the journey from the end of the steel to the camp had to be largely made by water. In some locations the railway now goes right "in."

Will 10 Hour Day Come in Camps?

The hours the men work have changed. Though there is not at present any general set hours in the camps, the operators state that woodsmen of today work less time. The belief has been expressed that the day is coming when a ten hour day will be the accepted as a recognized working day for the woodsman.

As a means of recreation or diversion from work now, gramophones are in many camps and there is also usually a ball field or an athletic ground where contests may be held if desired. Such fields are in the main primitive, but they fill the purpose well. Then there are dominoes, checkers, and other indoor games and amusements provided.

Twenty or more years ago the lumberjack worked for from thirteen to fifteen dollars per month and board and did a day's work, as a day's work meant in that time. Today the same class of labor is drawing around sixty-five dollars and board, and some operators estimate that even, at this figure, the class of help offering gets through only two-thirds of that performed a generation ago.

Canadian Deals Should be Marked

By York Long (Cox, Long & Co., Ltd.) London, Eng.

With considerable interest I have perused the article by Mr. James H. Lane of this city, in your issue of June 15th last, and also that of Mr. J. Ander, of Montreal, in your issue of July 1st.

With a good deal that is said by both these gentlemen any thoughtful person conversant with the Canadian wood trade must necessarily agree, but both of these correspondents omit to make any particular allusion to Quebec stocks of spruce, etc. This is the more remarkable, knowing as they must do, that the manufacture from that locality is nearly all that could be desired, hence in this country there is an increasing demand for these supplies.

It would be helpful to get expressions of opinion from the large operators in the Lower Provinces as to why they do not manufacture their lumber as consistently as the Quebec men. I think, too, it must be admitted that the manufacturers in the Quebec district produce their deals just as well made as the Swedes, and their grading is usually quite satisfactory—possibly, however, the Archangel stocks are more attractively made than either.

As regards marking or stencilling deals, etc., on the ends, I very much wish the Eastern Canadian lumber manufacturers would give serious attention to this question, as suggested by Mr. J. H. Lane.

If they were to carry out this matter in the same way as the Swedes, they would remove some very serious difficulties that at present arise in the handling of their goods at the port of discharge.

I predict the time is not far distant when this must be demanded by the buyers, in order to expedite delivery at this end.

Gathering Moss Sometimes Pays Well

Persons owning swamp lands in the vicinity of Brockville, Ont., are likely to benefit through a lucrative trade just developed in moss gathered from the marsh or low swamp lands. George E. Johnston, of Newmanville, Grenville county, and a relative, Claude Armstrong, are at present engaged in shipping three carloads of moss to Rochester, N. Y., where it will be used by nurserymen and florists. The moss, which is found in abundance in low lands, conserves moisture, and is used by nurserymen to wrap around the roots of fruit trees intended for shipment. Some varieties of the moss are used by florists in preserving cut flowers. The moss is sold by the cord, and brings a good price.

Ready Cut Houses Higher in Price

Owing to Advances in Labor and Material During Past Few Weeks Cost Jumps Considerably

Jas. Davidson's Sons, Ottawa, recently shipped to France a ready-cut house, illustrations of which are presented on this page. One picture shows the ready-cut house in construction and the other reveals it after completion.

The domicile is called "Type 2," and the outside measurement is 13 ft. wide by 26 ft. long, divided into two rooms of equal size, $\frac{7}{8}$ in. flooring, beaver board on the inside walls, shed adjoining 13 ft.

Type "2" house in course of construction, showing framing, sheathing, flooring and one wall and ceiling of one room covered with beaverboard

by 13 ft. outside measurement, but no flooring or beaver board on the shed.

The size of the material which went into the structure was as follows: Sills were $1\frac{5}{8}$ " x $5\frac{3}{4}$ ", finished size; joists, $1\frac{5}{8}$ " x $3\frac{3}{4}$ ", finished size; studs, plates, braces, girths and trusses, $1\frac{5}{8}$ " x $2\frac{3}{4}$ ", finished size; rafters, $1\frac{5}{8}$ " x $4\frac{3}{4}$ ", finished size; fascia, $\frac{3}{4}$ " x $6\frac{3}{4}$ ", finished size; roofing, $\frac{3}{4}$ " x 6" to 12", tongued and grooved; flooring, $\frac{3}{4}$ " x 4" to 6", tongued and grooved; outside sheathing, $\frac{3}{4}$ " x 6" to 12", tongued and grooved. Beaver board for inside with $\frac{3}{8}$ x $1\frac{3}{8}$ battens over joints, doors and shutters out of $\frac{3}{4}$ " V joint with battens. French sash, 6 lights each.

The house contained altogether 5,000 feet of lumber and 1,070 feet of beaver board. The weight was 7,000 pounds, and the cubic measurement 370 cubic feet. The house cost \$528, including crat-

The same house fully completed for shipment abroad. This house contains 5,000 ft. of lumber and cost \$528.

ing, f.o.b. Montreal. As this was a sample house, the firm had the same erected in their own lumber yard. Should a large order come their way the manufacturers would get the material for the other houses out and cut to length and have it packed ready for shipment.

It is interesting to note the developments that have come about in the export situation so far as ready-made houses are concerned. The Canadian Timber Products Association some weeks ago gave the Export Association, of Montreal, a price of \$375, f.o.b. Montreal, on type "A" house, which was to hold good until August 15th. At the end of that time, if the Canadian Timber Products Association did not receive the order, the price was void. The members were not very enthusiastic about executing any contracts at the figure originally presented, owing to the rapid advance in labor and lumber.

One member of the Canadian Timber Products Association stated

recently if they were figuring again on this house they would put in a bid of nearer \$500 than \$375. Since the original estimate lumber had advanced over 10 per cent., while labor had gone up 30 per cent. The order was not accepted by the exporters and the Timber Products Association members are not disappointed. They are now convinced that they would lose money if called upon to implement the original contract at the price put in at that time.

World Lumber Demand Not Yet Started

"One of our aims in making a guaranteed price is against the development of a speculative market, as we believe stability of price is the need of the lumber market, as well as every other American industry," says W. M. Beebs, manager of the lumber sales for the Long-Bell Lumber Co., of Kansas City, Mo., which firm inaugurated a few weeks ago guaranteed price lists covering periods of one month. Some pertinent observations on general market conditions and the outlook present and prospective, are presented by the company in a recent announcement. The views expressed will be read with interest:

"As we have said many times, the world's supply of available lumber is almost nothing, taking into consideration Australia, China, South America. When these countries, to say nothing of Europe, can get boats to supply them with lumber, you will see that the real world wide demand for lumber has not as yet even started.

"The home demand for lumber is very much greater than the supply, and when the other countries, which depend upon us for their lumber supply, are in position to get boats, it is hard to figure just where the market will rest.

"The car builders and railroads must of necessity buy immense quantities of lumber in the near future. The U. S. Railroad Administration officials are out scouring the country now trying to buy lumber to finish up the cars which were bought a year ago last June, and are having a hard time in filling their requirements.

"It is safe to say that it will be several years before the price of lumber is, relatively, any cheaper than at the present time. In fact we have no doubt but what there will be great advances over present values.

"We are often asked the questions why we do not run nights. Will say that there is not much chance for ourselves, or the industry at large, to operate nights when it is almost impossible to secure labor to operate during the day.

"On account of the car shortage, every order must provide for a filler so that every car can be loaded to its full physical capacity.

"What the retailer wants above everything is a stable market. While we know full well that we are not able to supply all of our customers with their entire requirements, yet we are willing to go just as far as we can toward that end.

"The great benefit which seems to come to customers in having a guaranteed price is the definite knowledge of what the stock will cost them in estimating a bill of material for their customer. Changes have been so numerous as to make it rather hazardous for a dealer to make a price to a contractor on a bill of material. When prices were going up as rapidly as they have been, he had no definite basis on which to figure.

"We have noted from some lists that a few other manufacturers have put this same plan into effect, both in yellow pine and white pine.

"While it may be considered good business principles and the natural tendency is to always sell to the best advantage and get the highest price obtainable, a broad view of the matter, under present conditions, leads us to believe that the highest price upon the immediate transaction is not always the best policy in the long run."

River Works Turned Over to Lumbermen

The policy of turning over the river works, booms and slides to the lumbering interests which use them, instead of having the government continue to pay for their upkeep, instituted by Hon. F. B. Carvell at Ottawa while he was Minister of Public Works, is being carried out and only one more lease, that for the Saguenay River Works, remains to be signed.

By this course officials of the Public Works Department estimate that the Government has been saved, at least, \$100,000 which it would have been necessary to expend in repairs to booms and slides this year, and which would have benefited only the lumber interests using them.

The lease for the improvements on the Ottawa River was signed a few days ago with the Ottawa River Improvement Company, and for those on the Gatineau with the Gilmour and Hughson and Edwards interests.

The St. Maurice River Driving & Boon Company took over the works on that river some years ago, and the Chicoutimi and other interests are at present operating the booms and slides on the Saguenay, although the leases have not yet been signed.

The Goal of Uniformity Attained

One Code of Grading Rules in Hardwood Lumber Now Prevails Throughout the Continent

On several occasions when the matter of grading rules for hardwood lumber and the desirability of uniformity has been discussed it has been suggested that the best way to arrive at that result was for the other organizations to adopt the rules of the National Hardwood Lumber Association. They have now done so and uniformity is an accomplished result, says the "Mississippi Valley Lumberman."

The National Hardwood Lumber Association has been perfecting its code of grading rules for a number of years. Other changes will probably be made in the future. The first rules were not perfect. Those who formulated them did not claim perfection for them. Errors and inconsistencies have been ironed out, and some changes have been made because of changing conditions or to meet the desires of considerable numbers of the members of the organization; but always there has been an advance.

Some years ago, a considerable percentage of the membership, composed chiefly of southern hardwood lumber manufacturers, believing that they were too much in the minority to obtain what they desired, or for some other cause, withdrew from the National organization and organized the Hardwood Manufacturers' Association of the United States, which later became the American Hardwood Manufacturers' Association of the United States, which later became the American Hardwood Manufacturers' Association. Under the latter title they made approaches to the directors of the National Association, suggesting that they might adopt the National rules, provided the National would agree to certain changes in its inspection system. The National Association could not agree to this, so the American organization decided to formulate a code of rules of its own.

Its rules committee could not find anything better as a guide than the National rules, so they formulated a code, which differed only in defects from the rules of the National Association. They could not copy them outright, because they were protected by copyright. Finding that they could only eliminate the defects in their rules by making them absolutely the same as those of the National Association, they finally agreed to adopt the National rules in toto, and the National Association directors agreed to waive the copyright privileges. The only difference between the two associations now, in the matter of grading rules and inspection is that the American Association will confine the work of its inspection department to the settlement of disputes, while the National organization uses its department in making original inspections.

The American Hardwood Manufacturers' Association appears particularly fortunate in respect to grading rules. Not only has it been able to find an entirely satisfactory code for the inspection of hardwood lumber, but it has adopted the rules of the Southern Cypress Manufacturers' Association for the grading of cypress; the rules of the Southern Pine Association for the grading of southern pine; the rules of the Maple Flooring Association for the grading of maple flooring; the rules of the Oak Flooring Manufacturers' Association for the grading of oak flooring; the rules of the Commercial Rotary Gum Association for commercial rotary cut veneer, and the rules of the Rotary Cut Box Lumber Manufacturers' Association for rotary cut box lumber.

When the National Hardwood Lumber Association was organized, it was composed of manufacturers and wholesalers representing all parts of the country, and it was hoped that a uniform set of rules could be formulated for the grading of all American hardwood lumber. Several times this seemed about to be accomplished, but fell just short of the mark. It now seems as though the goal of uniformity has been attained, and it is to be hoped that there will be no more kicking over the traces.

Big Problems for the Retail Lumberman

There is a great deal of work for any large or small association in the lumber arena to undertake. No matter what is accomplished new problems are always coming to the front, clamoring for adjustment and solution. It has been said that the poor will always be with us, and as long as trade and commerce continue there are bound to arise difficulties that will perplex and annoy.

The same is quite true of our own isolated selves. We are never—for any lengthened period at any rate—wholly free from mental or bodily disturbance, pain or uneasiness. No life, no calling, no pursuit flows on calmly and quietly from its source to its destination without a few "ripples" or "rapids."

It has been asked what a retail lumber dealers' association, nation wide, could accomplish, and what future has it? Here are a number of things pointed out by the "American Lumberman," which are worthy of serious study by the yardmen of every province in the broad Dominion of Canada:

The subject of housing is one of great and increasing importance. The people of the U. S. are going to insist upon having more sunshine and fresh air in their houses, and larger lots upon which to place them. All this will help the lumber business, and the lumberman should be foremost in furthering every movement looking toward more and better homes. As a specialist in woods he should see that the residents of his city or community are thoroughly educated regarding the good points of lumber, its wide range of usefulness, and at the same time be on hand to combat any misrepresentations by distributors of substitute materials. The National association is constantly putting out literature along these lines for the use and benefit of the lumber dealers in serving their customers.

The increasing cost of distribution is another subject that has received and is receiving considerable attention by the association. In this connection it should be mentioned that the association has adopted a uniform system of cost accounting that is proving very helpful. A subject of importance to every retail lumber dealer, and to business men in other lines as well, is that of the amount that may be legitimately charged to expense. Accurate accounts are absolutely essential to success in business. Without a clear idea based on knowledge of this important matter a man is likely, in making his returns to the Government, to enter for expenses a smaller amount than he is entitled to deduct, not being fully informed with regard to all the many factors that enter into the expense of conducting a business or the proper methods of distributing that expense.

On the other hand, he is likely to enter too large an amount, through ignorance, and be unjustly accused as a profiteer. It is very easy, in these days of rising costs, to overlook the fact that expenses advance a little faster than income, and the only true basis for profit is a proper return on the investment, which is every one's due.

There also are the big questions of the best and most efficient methods of conducting a retail business; of deliveries, whether teams or motor trucks are the more economical; the question of labor, and many others. All of these subjects are very closely interrelated. Methods that have been found helpful in one city might, if applied in another, prove the very means needed to relieve an acute situation, and all these and many more are matters on which the National association is gathering data and distributing them to its members, as well as taking active steps toward eliminating many abuses in the business.

Only through co-operation can advancement be made by any group of men in their business matters. National associations in every line of business are accomplishing much for the industries. The retail lumber business is one of the largest and most extensive of the many lines and a very large amount of capital is invested in it. It needs associations, in city and State, but, above all, a strong national association, if it is to be recognized in national matters, and there is much need for work in this direction.

Making Paper From Cotton Linters

The Department of Agriculture of the United States has been distributing samples of a good quality of paper made from cotton linters by its forest products laboratory at Madison, Wis., and claims it can be commercially produced in large quantities. Speaking of the possibilities, it says:

"Second-cut cotton linters, the short fibers which are obtained from cotton seed after ginning and removal of the lint suitable for cotton mattress stuffing, can be made into high-grade book, writing, blotting and tissue paper. This possibility will probably reduce the price of all kinds of paper. Second-cut linters can be removed fairly easily from the seed, but this is not the present mill practice. The shorter fibres are left on, although they interfere with economical oil extractions and have no food value when mixed with the ground cotton seed meal.

"The possible supply of this new paper material is about 600 tons a day. Once it comes into the market its influence on paper prices should be decidedly beneficial.

Forest Fire Patrol Working Well

The recently established aerial forest fire patrol discovered 35 fires in one week in California and Oregon and made 79 flights for a total of 8,536 miles. The patrol service was extended recently to Oregon and 28 of the fires discovered were in that state.

Ninety-one fires have been discovered by the service since it was inaugurated seven weeks ago. The forestry service, the announcement said, was able to extinguish the greater number of these fires before they gained headway.

What Line Lumber Yards Have Done for West

How They Have Contributed in no Small Measure to Growth of Prairie Provinces— Their Management, Service and Operation Outlined

Theo. A. Sparks, Grandview, Man.

jobs in the neighborhood and working at them with the spirit to "get there."

When in his 24th year Mr. Sparks went West and took a position in the office of Theo. A. Burrows, who is now president of the Northern Lumber Co. Mr. Burrows was a spruce manufacturer in the province of Manitoba, where he has operated in that kind of timber for the past forty years. Mr. Sparks soon took a situation on the road, and for several years covered the prairies as a lumber salesman. Mr. Burrows had operated a lumber yard at Selkirk and Winnipeg in the early eighties, and in 1896 opened a yard in Dauphin, which is still in operation. Some eleven years ago Mr. Burrows decided to conduct an extensive line of retail yards in connection with his milling interests. Mr. Sparks was given the organization of them and expansion was the watchword until to-day the Northern Lumber Company have thirty-eight yards on the Prairies, principally in Northern Manitoba and Northeastern Saskatchewan. Mr. Sparks also retains the position of General Sales Manager for the wholesale end—the Theo. A. Burrows Lumber Co., who, of course, manufacture more than is absorbed by the subsidiary retail company. During the past year, five more retail yards were launched, and the sales office of the Theo. A. Burrows Lumber Co. and the general office of the Northern Lumber Co. removed from Grandview to 411 Electric Railway Chambers, Winnipeg.

Back of every successful enterprise there is a story of a purpose and plan, as well as of policy. The Northern Lumber Co. attach much credit for the rapid development of their interests to the fact that their local managers have always been instructed to give the very best service and to be absolutely fair in their dealings with the foreign population as well as with those who readily know how many pieces make a thousand feet of lumber.

The Northern Lumber Co. state they were the first concern of their kind in the West, and, possibly in Canada, to employ a certified architect in connection with their Service Department, and to supply free plans of houses and barns to prospective customers. The company have tried also to create harmony and team-work in the staffs of all their retail yards and have instituted a bonus system to local managers over and above their regular salary. This bonus consists of 10 per cent of the net profits of the respective yards.

All stock when shipped to the yards is invariably dressed as the mills in the various districts operate their own planing plants. While the main source of supply for spruce in connection with the Northern Lumber Co.'s activities is naturally the Theo. A. Burrows Lumber Co., situated at Grandview, still the Northern Co. buy spruce in the open market, taking the cuts of several smaller mills and purchasing large quantities of B. C. fir.

Speaking of the methods and management of line lumber yards in the West, Mr. Sparks, in a recent interview, said—"The methods are possibly as advanced as those followed anywhere on the contin-

ent, with regard to perpetual stock sheet, collection department, the sales department, service department, etc. The operation of these is so well known and so uniform in character that I scarcely think I can tell you much that is new or useful. I might add that our service department, where necessary, is prepared to supply the farmer with a fully completed house, painted, with farm lighting plant installed, etc. We advertise "From Stump to Completed Home," and "Real Homes," rather than 2 x 4's and shiplap which enter into it.

"In regard to terms of settlement, we give substantial discount for cash, but necessarily have to make concessions extending to the Western settling date—that of the wheat harvest. These longer terms of the Western lumbermen have proved to be important factors in the building up of this great country. When the history of the West is written we feel that the Western Retail Lumber Dealers will be accorded their just meed in having contributed in no small way during the period of the making of the great prairie provinces. This has been done through these credits extending over times when the crops were bad, etc., and thus has helped to develop a great, progressive people."

Mr. Sparks has been for five years a director of the Western Retail Lumbermen's Association, which has a membership of some 1,400 live aggressive yardmen and, at the annual meeting held last winter in Calgary, was honored by being elected vice-president.

Endless Belts Smooth in Operation

One very important and valuable quality of the leather belt, to which sufficient attention is not given, is the facility with which it may be made endless, and the great advantages which characterize an endless belt in its smooth operation over the pulleys and its freedom from fastening troubles, says a recent publication of Sadler & Haworth. It is quite possible to make endless Rubber, Balata and Stitched Canvas belts, but this can be done satisfactorily only at the factory in the process of its manufacture, involving a delay of a week or ten days, which is in most cases prohibitory. Endless joints in these belts, too, are without the special convenience of the endless joint in the leather belt because of the fact that when they stretch, and shortening becomes necessary, it is impossible to do anything with the factory joint. It cannot be opened and remade after a piece has been cut out, but the only recourse is to cut the belt, and make a new joint with laces or hooks, after which it is no longer an endless belt, and all the advantage of it once having been endless is lost. It also is not possible with these belts to make a satisfactory joint over the pulleys, but otherwise must be restricted to those places where it may be possible to open the shafting, or where the two pulleys are outside the hangers. These restrictions make it possible to use the fabric endless belts in comparatively few cases where an endless belt would be desirable.

The leather belt, on the other hand, can be successfully made endless by any good mechanic who is trained to work to line. After the possession of the proper belt clamps and other tools, and a good cement, all of which are readily obtainable, the only problem, and one easily mastered, is to have the belt drawn up straight and the ends square. With very little practice any intelligent mechanic can make a first-class joint on a belt in its proper position around pulleys, and to the proper tension. Furthermore, when this belt has stretched a little so that its tension has been decreased, the same intelligent mechanic can open the joint he has made, cut out such a number of inches as may be thought desirable, make a new joint in the same manner as before, all in very little time, and the belt is soon ready for continuous duty, without the objection of a lace or hook joint.

So much of all the belt trouble is due to deficient connection of the ends, that we think we should give some special consideration to the subject and inform the buyer how simple an operation it is to make a leather belt endless, and the advantage of so doing. Those methods of fastening the ends, which require holes to be cut or punched through the material of the belt, necessarily weaken the belt at that point, and when one of them pulls out, as they are likely to do, there results a crooked belt which makes trouble. The various forms of wire lacing, both those inserted by machine and by hand, distribute the strain more evenly over the width of the belt, but are open to the objection that the perforation which they require becomes a point of weakness. No other form of joining the ends of a belt can compare in efficiency and permanency with the endless joint.

POINT FIFTEEN

Marie Corelli in Sunday Chronicle (Eng.)

"Reconstruction! Reconstruction!" This has become almost a parrot cry. What we have called "civilization" has had its little house of cards blown down by a hurricane, and we stand, more or less bewildered, looking at the bits of pasteboard lying about, and wondering how we shall begin to put them up into some sort of shape again. "We must reconstruct!" we say, both in Press and Parliament. But how? Each man asks the question of his neighbor, and each offers a different opinion.

The continuous uncertainty, suspense, and general muddle make up the finest possible hunting-ground for loose-minded agitators and blustering demagogues, who are, of course, paid for their agitations and demagogue-isms either by British malcontents or German agents, and pocket their ill-gotten gains as cheerfully as lawyers who, if they lose their clients' cases, lose nothing themselves.

* * * * *

Amid all the turmoil one man from America assumes, or rather presumes a dictatorship for the rest of the world—though why he should be permitted this privilege will ever be a riddle and a mystery, save to the sneaking devil of finance.

With a quill from the American eagle's swooping pinion he sets down fourteen points of "reconstruction" which, like fourteen rays of light, are to emanate from himself as the central sun of social and political wisdom.

There would be something humorous in this if it were not, as a whole, so desperately tragic.

Think of it! One man, one poor, little, swiftly perishable microbe of humanity, setting down, as in a copybook for children, certain rules and laws for the brotherhood of nations and for the better behaviour of all the Cains and Abels of the race!

In this moral attitude, self-assumed, quill in hand, the complacent Pronouncer of Platitudes has none of the greatness or wisdom so foolishly attributed to him; he merely makes one of the most pathetic figures in all history. He would seem to imagine it possible to succeed where the Divine Christ failed!

Pitiful self-delusion!—immense effrontery!—the blind confidence of a gnat confronting flame!

* * * * *

For this simple platitudinarian of Fourteen Points, in his copy-book schemes for "reconstruction" and general fraternity, has forgotten the greatest point of all—the point which makes all such schemes impossible of workable fulfilment—Human Nature.

Human Nature is the untamed, and possibly for ever untamable, monster of life—the half-God, half-devil, that rejoices in its dual character and is at most times more satisfied to be devil than God—now revelling in the brute claims of its brutish desires, and anon springing to the pure height of a spiritual ideal so lofty as almost to touch the throne of God.

No copy-book precepts will control this strange product of the unfathomable mind of the Creator. It has to fight its way alone. As it emerged from Simian and cave-type men to its present doubtful state of semi-civilized savagery, so it must emerge of itself, if at all, with such mental and moral consciousness as will persuade it that its human brothers are not survivals and would-be destroyers.

* * * * *

The American Eagle will succeed in hustling this slow evolution and most gradual phase of education—no, not if a hundred "Points" were pulled from its wings instead of Fourteen.

The unwritten, undeclared, and well-nigh forgotten number rules all the rest—Point Fifteen—otherwise Human Nature.

Human Nature, with a devil-impulse, has sunk the German Fleet in the Scapa Flow. Human Nature has likewise burnt the French flags captured in 1870. "Vulgar spite," says the Press. Certainly. But spite is a part of the devil side of human nature.

German human nature, which is, racially, fierce and cowardly at once, like Shakespeare's "bully Pistol," will eat its heart and all other hearts in its way for the purposes of vengeance.

British human nature, easy-going and phlegmatic, is, after much ox-like patience, beginning to resent the irritating insolence of Government control, which measures out its beef and denies it its beer, and means to "have it out with every man jack of the lot," according to street parlance, some day.

Every nation is ill at ease—every man and woman strung up to an unhealthy nerve-tension. Yet we mildly prattle of peace—"when there is no peace;" no, not under any German signature.

* * * * *

And our "reconstruction"? What is it worth?

Who will "reconstruct" the human nature of the beaten and baffled Hun? Who will temper the thirsty palate of the beer-loving Briton? Who will "reconstruct" the lost faith of Italy, and bind up the gaping wounds of France and brave little Belgium?—Belgium in particular, who sacrificed all to save her neighbors!

There is no sign as yet of any such "reconstruction."

Among ourselves there are evidences of violent hysteria, which displays itself in the delirium of our women who, casting off as much clothing as the police will allow, dance in a semi-nude condition night after night in public places, and offer themselves to immorality without shame; while the men, adrift from the clamour and horror of war, look about at home for something to kill—either their unfaithful women or their broken and disheartened selves.

In this sort of plight human nature is reverting to brute instincts merely; and as a sapient evening newspaper remarked in its columns the other day:—

There has been recently a considerable outcrop of crimes of violence which is not a little alarming, and it is to the interest of the community that the causes and possible cure of this social disease should be sought.

O wise judge! O learned judge! It is, indeed, "to the interest of the social community" that the "causes" of the utter downfall of women's modesty and the evidences of men's callousness should be probed to their root.

Look for them, then!—and find them in the weakness, timidity and inefficiency of the Church; in the criminal sufferance accorded to atheists and sexualists; in the indecencies of the "gutter" Press, pictorial and otherwise! It is difficult to find a newspaper nowadays without a "snapshot" of a nearly nude woman; and this is the sort of daily pictorial provender sent into the houses of Britain for the entertainment of growing girls and boys!

To quote again from the sagacious journal before mentioned:—The high spirits of youth, if directed into healthy channels, are an asset to the nation; allowed to drift they become at once a grave danger and a sorry disgrace to the community.

Just so. And it is not any "League of Nations" or Wilsonian maxims that will amend social or political matters as they stand today both in Great Britain and America.

* * * * *

Intrigue and corruption are rife in both countries, and while intrigue and corruption are tolerated by any statesmen such a thing as our "reconstruction" is impossible.

It is a matter for each individual to consider deeply whether he or she is able and willing to aid in the task by "reconstructing" himself or herself.

At the moment society is merely "running amok," and there is no self-discipline. Personally, I do not wonder at it, for the tolerance shown by the public Press to atheism and blasphemy has deprived religion of its hold on the mind and robbed the afflicted of comfort, so that one constantly hears people say: "Oh, what does it matter? Nobody cares whether you're good or bad, dead or alive—it's all one."

The great unchanging Law of God, which never fails to recompense evil for evil and good for good, is seldom recognized or admitted; humanity all over the world seems bent on the swift "rush" to its end!

"Reconstruction" is a fair-sounding word—but the deed is in abeyance.

Some few things might be done for the help of the young—the bookstalls might be cleared of filthy fiction such as even Rabelais might have blushed to own; the Press might once more be clean, and refuse to deal with subjects only fit for medical discussion; and the stage might encourage legitimate drama decently clothed.

A skidway of pine logs in a Northern Ontario camp

First Band Mill Built in Canada Still in Use

A number of band mills, carrying narrow saw blades and designed to take the place of the hand saw and circular saw in woodworking establishments were shown at the first Paris Exhibition. At the second Paris Exhibition band mills carrying a good deal wider saw up to 6 inches were shown, which made it possible to cut small logs; consequently a French band mill was introduced in Quebec about 1860 by Mr. Peters, but did not prove satisfactory. At that time, no one knew how to handle band saws properly and the continual breaking of the saws made the use of the mill unprofitable.

About 1890 the Waterous Engine Works Co., of Brantford, Ont., made up a design of a band mill. This mill was especially designed for the eastern trade; in fact, the first mill went to the Gaspé Peninsula. In the course of the following three or four years the Waterous Company built seventeen of these band mills, some of which were placed in Ontario mills. Most of these have disappeared, but one is still at work at the Knechtel Furniture Company, Hanover, Ont. From a letter received lately comes the word that it is in as good condition and doing as good work today as it did in 1892.

The demand for band mills became general, and a number of band mill designs were developed in the United States.

Band saw built by Waterous Co. of Brantford, in 1890, and still in working order in Hanover, Ont.

One of the best, and one which attracted a good deal of attention on account of being exhibited at the Chicago Fair in 1893, was built by the A. P. Allis Company, of Milwaukee. As the Waterous Company saw the advantage of this machine and knew the prestige of the Allis Company, they made a contract to build the Allis mill in Canada for a royalty, though the band mill was never patented in the Dominion, and commenced to build these mills in 1894.

It must not be forgotten that, since the construction of the first French band mill in Canada, the steel plate manufacturers have made enormous improvements in the evenness of their band plates, so that by the time the Allis band mills were placed in the mills in Canada, there were few troubles experienced with breaking saws. Of course, a good deal of cracking of saws was still in vogue, but the cause of this was

not entirely the saw-makers' fault, but inherited in the band mill construction.

The improvements in band mills were very slow and no decided changes took place till Mr. Fitzgerald, of the Allis Company, developed the telescopic band mill, which was brought on the market in 1898. The Waterous Company consequently started to build some in 1899. The telescopic features of the band mill promised a band mill of great efficiency, as it made possible the use of double cutting saws.

The adoption of the telescopic band mill in the United States was very quick, but unfortunately the machine did not produce the results expected. The underlying principle of the telescopic band mill was to use double cutting saws and to eliminate the use of saw guides by bringing the part of the saw leaving the top wheel as close as possible to the log.

As the logs are of varying diameter, it was necessary to lift and lower the whole band mill to suit the log, which had to be done often and quickly. To do it quickly it took considerable power, and the mill had to be fairly loose in the guides. This last condition proved the stumbling block for success, as it created vibration in the mill frame and consequently the mill cut poor lumber. To overcome this the sawyer clapped the frame tightly into the guides which prevented the mill from raising and lowering and made the mill a standard band mill. Not having saw guides the lumber made on this mill was not uniform in thickness, because no saw can be hammered to cut straight. Every saw has a tendency to cr either in or out. For this reason the double cutting band mill came in bad reputation in the United States.

The Waterous firm had built between 1899 and 1902 four telescopic band mills which were placed by them in different mills in Canada.

During the time they introduced band mills in Canada, they had established in their factory an instruction course for saw filers to come to Brantford during the winter months and be instructed in the way of handling band saws.

The instructor in saw filing whom the company had in their shop for several years was Mr. Jack Grant, who happened to be filing in Parry Sound in 1901 with the Conger Lumber Company. He had ample opportunities of watching the telescopic band mill in use at the Parry Sound Lumber Company.

In the fall of 1891, Mr. Grant came to Brantford with the suggestion that he would undertake to run double cutting saws on the standard band mill if the firm could devise for him an upper and lower saw guide which would enable him to change saws quickly. They made a design for both, and in the spring of 1902 the first double cutting band mill was run in Canada on a standard band mill. The Waterous Company feel quite sure that no double cutting saw was run before this on a standard mill.

The success obtained in Parry Sound was so encouraging that from that date very few single cutting mills were placed in Canada, although the bad behaviour of the double cutting saws in the United States had not been forgotten.

The Waterous Company found that in double cutting band mills it was more essential than in any other band mill to have the saw guides adjustable around the centre of the saw plate and the firm consequently designed the first lower saw guide and the upper saw guide.

The Allis band saw had a number of weak points. The base was overhanging. The top arbor was only supported below; the saw guide lifting mechanism was placed on the top of the frame, consequently creating a big vibration after running several seasons, and the saw staining device was rather crude. There was designed in the fall of 1908 the new Waterous band mill, which gave the band mill an extended base. It carried the arbor boxes beyond the arbor, gave the mill column a more rigid construction and eliminated the saw guide raising mechanism by moving the same by steam or hydraulic pressure. Last, but not least, a very sensitive saw staining device was introduced. Some other minor improvements were made which are outside the scope of this paper.

It might interest the reader to know that since building the first band mill the Waterous Company have built up to date over 240 machines, made up as follows: 17 mills; 141 Allis mills; 78 new Waterous, which are built in four sizes.

How Leading Firms View Logging Outlook and Operations for 1919-20

Expansion is the watchword in logging operations, and from reports received by the "Canada Lumberman," extending over many parts of the Dominion, the majority of firms are preparing to take out more timber than at any period during the war.

The sawmill cut during the past season has been the smallest in many years, while the demand for forest products, owing to the heavy purchases in Canada by the British government, the active requisitions across the border, the big building campaign, and the calls from the various countries of Europe, has caused a decided shortage in numerous lines. Next spring it is expected that shipping conditions will be normal and ocean freight rates brought down to a reasonable basis, while the reconstruction campaign will have taken on added impetus, not only in Great Britain, but in France, Belgium and other countries.

The past year has been an encouraging one so far as new buildings are concerned in the bigger cities, but the smaller centres have only begun to take advantage of the provincial housing schemes. In not a few cases excellent sites have been secured and the necessary organization got in shape to go ahead with projects in hand. By 1920 all this will be arranged and matters generally will be on a more stable and solidified basis. It is hoped that the unrest—not to say revolutionary spirit—which has been in the air, will have disappeared and that a calm, saner and more dispassionate state of affairs may prevail.

Many large industries, contractors and even private owners have held back during the past season, owing to an apprehensive attitude. They did not know exactly where they were at or what was forthcoming. They believed that things could not be any worse than they were so far as strikes, tie-ups and excessive demands were concerned. The talk of one big union, cumulative bargaining, Bolshevism, Soviet rule and other manifestations of the times naturally caused investors to hesitate. Capital is aggressive on certain occasions, but diffident in others, and the building campaign did not, owing to the reasons already outlined, enjoy as wide a sweep and large results as anticipated. Next season everything should be at its highest. There appears no possibility of the price of lumber, particularly hemlock, white pine and spruce, receding. The cost of production will be greater this winter than ever, judging by present indications, and thus any hope that may have existed with respect to cheaper building material has, by the logic of post-bellum events and the force of reconstruction circumstances, been sadly shattered.

What Others Are Doing

It is always interesting to ascertain the views of the other fellow and learn how he sizes up the situation. With this hope in view the "Canada Lumberman" got in touch with several extensive logging and lumbering companies regarding their programs during the coming season. It will be noticed that the majority of them intend taking out more timber, in fact, the operations of some will be limited only to the number of men available. There is no expectation, however, that costs will come down, either in the matter of wages or provisions or the up-keep of camps. The most agreeable features to be presented at this juncture are that a larger amount of help is available and the demand for lumber of all kinds during 1920 will be greater than at any period since the outbreak of the war. There is no danger of production satisfying the calls that will be made for all grades and classes of wood goods, either at home or abroad, while prices will steadily ascend, so far as one can prejudge the general situation. How high they will go no one is in a position to state. The feeling in the best informed circles is

that values will not recede for at least another twelve months, and perhaps not then.

The Denis Canadian Co., of Whitney, Ont., say:—We expect to double our output of logs over last season if possible. The labor situation looks rather uncertain at present, although we do not anticipate any marked shortage of help when the movement for the woods gets under way later in the season. Wages are apparently going to be about the same as last season, but if any change it will be downward, as the wages of bushmen is now too high in comparison with other occupations where common labor is used. Costs of logging have much more than doubled during the past four years. Supplies and labor have about doubled, while the production per man has fallen off to an alarming extent. So many boys and poor men are employed that it lowers the standard for the whole crew. We think from now on a better class of men can be obtained and some of the culls weeded out."

* * *

Operating Expense Up Fifteen Per Cent.

Clarke Bros., of Bear River, N.S., observe:—We expect to be sending our full complement of men to the bush when the season opens. At the present time we are getting ready to put down the foundation of a pulp mill at the mouth of Bear River, where we expect to manufacture pulp. As soon as we can get this mill completed and ready to run, we intend devoting our attention at our Lake Jolly plant largely to the manufacture of hardwoods. Operating costs are from fifteen to twenty per cent. greater than they were in the winter of 1918-19, and while we can see no reason why there should be an increase in these items, we are not anticipating very much in the way of a decline for the present year. Of course, should the high cost of living continue, we must necessarily have an increase in the matter of wages. Then, there is no surplus of labor at the present time. We are, however, getting sufficient for our requirement, but unfortunately we do not regard labor today as being more than from sixty to seventy per cent. efficient. We are at the present time, and have always operated our camps in such a way as to put them at the head of all industries of this kind in Nova Scotia. We believe this is generally acknowledged. In regard to figures relative to the cost of feeding men, this item has doubled in the last five years, and today we would not consider one dollar per day as being more than sufficient to pay the cost of rationing men in the bush. While ordinarily we used to put timber on the brows for \$5, we discovered in the winter of 1918 it cost us \$10.50.

* * *

Recent Fires Increase the Cost

A. E. Beck, of Thessalon, Ont., who is vice-president of the C. Beck Mfg. Co., of Penetanguishene, writes:—The cost of logging last year was very excessive and all the northern lumbermen had hoped that it would be greatly lessened this season. But from all present indications the logs will cost more than ever. The same wages are now being paid as held during last year. A feeble attempt was made by a few companies at the start to hold the wages down to a more reasonable rate for woods work, where the men are boarded free, and consequently do not worry about the high cost of food. Immediately the camps were opening in any number and there was an increase in the demand for men, some companies started hiring at the old rates and others had to follow or secure no help. The cost of camp supplies of all kinds is much higher than last year. Practically all lines of groceries have advanced in price, and I expect it will cost a great deal more to board the men this season. Horse feed is also very high. The only hope of getting cheaper logs this year will depend on the efficiency of the labor in the camps. So far

we seem to be getting a more experienced class of labor and there appears to be no lack of men available for the camps. If we can get rid of the desire of men in the camps to get all pay and board and no work, or as little work as possible, it may result in logs at a more reasonable price than has been the cases during the past few years. The disastrous fires which have swept a large number of the limits will greatly increase the cost of this year's logs, as a great many camps have been burned, and will have to be rebuilt. Quantities of supplies and outfits have been lost and these will have to be replaced at greatly increased cost, while valuable time has been lost in getting at making logs.

* * *

Dry Weather Delays Starting

The Schroeder Mills & Timber Co., of Pakesley, Ont., report that the weather has been so dry that they have not started their camps yet, but will do so now as the country has had some rain during the past few days and bush fires appear to be pretty well over. "Men seem to be much more plentiful this year than last—that is when you think of the season. This time last year nobody had any men in the woods; today camps which have only been running a short time are over half filled, and some of the others are full up. Wages seem to be just the same as last year, with a slight tendency to be easier, as men are more plentiful, but the cost of board is enormous, and horse feed is almost out of sight. We will put in six or seven camps and will not take out any more than last year," say the company.

* * *

The Scale of Wages Being Paid

James Davidson's Sons, of Ottawa, declare:—The operating cost as regards wages are about the same as they were this time last year, and run from \$55 to \$65, general hands getting \$65. This \$55 and \$65 per month is with board also. The prices on provisions and camp supplies compared with 1918 and 1919 have advanced, we find, about 10 per cent., and it does not look at the present time as if these commodities would come down. It seems that every time we send out a requisition for camp supplies, that invariably the prices are higher, so we do not know just where it is going to end. With regard to labor, we might say that as far as the bush is concerned it is plentiful, but as to its efficiency the men are not the same bushmen as we could have got ten years ago. The average bushman of today is inclined to take things easy as compared with his forefathers years ago. We are sorry that we are unable to give you figures relating to the cost of feeding men, getting out timber, etc., based on our operations of last season, for the reason that we do not keep these items separate."

* * *

Operations on the Georgian Bay

Manley Chew, of Midland, Ont., says that he intends to take out about the same quantity of timber as last year and advises that the cost of operation will be fully as high as during the past winter. Mr. Chew adds: Provisions are higher. Wages today are not quite so high, but it would not surprise me to see them almost as high as they were last year, later on. We have a little more labor than during the last three years, and get a little better satisfaction. We have made no changes in our camps, but always try to keep them up to the standard. With reference to feeding men, we may add it will cost more this year than ever before. About the cost of taking out timber, this altogether depends upon the location. Generally speaking, it will be equally as high as last year.

* * *

Dollar Per Day to Feed Each Man

The Colonial Lumber Co., Limited, of Pembroke, Ont., report:—We expect to put in six or seven camps this season, which is about the number we had last year. We will possibly have a few more men in our camp, in which case we will take out two or three more million feet; at any rate, we should take out about the same quantity as last year. As regards operating costs, would say that wages are now as high as they were last year, but we find that all supplies are much higher in price, so that as far as we can see, the out-

look at the present is that logs will cost more this coming season than last. We cannot give you any figures relative to the cost of feeding men, but would say that according to our records, last season, it cost us about \$1 per day per man in some camps and about \$25 per month in others.

* * *

Will Double Number of Camps

Shepard & Morse Lumber Co. (Canada) Limited, Ottawa, say:—It is our intention to put in double the number of camps we had last season. While men were very plentiful a month ago, most all the operators are going in heavier this season, and as a consequence woods labor has become very scarce in the last two weeks. Wages are practically the same as last season with a likelihood of an advance, owing to the shortage of labor, although when the crops are harvested men will be more plentiful. No doubt it is going to cost the lumbermen more to take out logs this season than last, owing to the higher cost of provisions and materials used in the operations. Our camps are always built on the most sanitary lines and inspected by a qualified medical man early in the season and monthly thereafter. We cannot give you any figures as to the cost of feeding men this season, as it is too early, but in any event it will be higher than our last operations.

* * *

Logging Jumps Six Dollars Per M

The McGibbon Lumber Co., of Penetanguishene, state: We will take out a million feet more this year than last, and will put about fifty more men in the bush. The wages are running about the same as last year, and we have had no trouble getting men as yet. The good class of lumbermen that were around before the war have all disappeared and it takes at least three men to do two men's work. Provisions are up at least 20 per cent., and we do not look for a drop. It cost us last year 21½ cents per meal to feed our men and \$6 per M. more to take out our logs, than it did the year before. What this year will bring forth we do not know, but we do not think it will be less than last year.

* * *

The Flu Helped Pile Up Costs

The Muskoka Wood Mfg. Co., Limited, Huntsville, will take out about the same amount of timber for 1920 as they did in 1919, and regarding the fact the company assert:—From the present outlook, the cost will even be higher than 1919, which was the worst year we ever had to take out stuff, as far as cost goes. Our cost for taking out logs for this year was \$5 per thousand higher than the preceding year. Of course, a considerable part of the cost during the winter of 1918-19 was caused by so much sickness in the camps and the mildness of the early part of the winter. With a very favorable winter, we might take out logs for the same cost this winter as we did last.

* * *

Bath Tubs Which Few Men Use

The Crows Nest Pass Lumber Co., Limited, Wardner, B.C., furnish the following interesting review of the present situation:—For the past three years we have tried to in-

A log drive in one of the thickest timbered parts of New Brunswick

crease our output of merchantable saw-logs, but instead of accomplishing an increase, each year has shown a decrease in the output. We are counting on getting all the logs we can, although we do not anticipate making any great investment in further equipment. Our experience is that costs are continually advancing. This includes wages, provisions, hay, oats, coal, tools and equipment. We doubt if we are competent to say whether or not there will be any reduction in the cost of these items. During the past two months there appears to have been an appreciable increase in the number of men willing to try a few days' work in the camp. Very few of these seem to have had any experience in logging or using logging tools. Some men whom the employment agencies sent out as teamsters have had to first learn to harness the team. It would be a conservative statement to say that labor is fifty per cent. efficient under the pre-war period. For a number of years our camps have been equipped with steel bunks, springs, and mattresses. Last year we installed bathtubs and bathing facilities as required under B. C. law. However, the men do not use them very much.

* * *

Labor Supply is None Too Plentiful

The Hocken Lumber Co., Limited, of Toronto, who have mills at West River and Deer Lake, say they expect to increase their operations this season by about twenty-five per cent. They are putting in more camps and expect to take more logs than any year since the war started.—"As to present operation costs, wages and camp supplies are steadily increasing and we do not anticipate that wages will decline, as to our mind there is nothing now in sight that indicates any noticeable drop in prices of camp supplies," add the company. "In regard to labor in our district, at present we find it very difficult to keep operations moving as we would like and do not notice any improvement in efficiency. Conditions seem at present somewhat peculiar in the country. Instead of the old immigration problem we now have a pretty extensive emmigration, which is causing some inconvenience and a drain on labor, but matters will adjust themselves in time. We are offering our men good wages and steady employment with as comfortable surroundings as we can conveniently supply, so as to induce them to stay with the job."

* * *

Lumberjack Goes on Individual Strike

The Spanish River Mills Co., of Cutler, Ont., furnish the following interesting review regarding the prospects for the coming season so far as production, wages and operating costs are concerned:—"We are endeavoring to increase our cut of sawlogs this year if we can get a sufficient number of men. It is pretty hard to say at the present time just how much we will be able to do. The foreigner, upon whom we largely depend, is going back to Central Europe as soon as he can get passage, to look up his family or friends, whom he has not heard of for several years. Many of those who have not planned to go back are somewhat indifferent about going to the woods and are looking for a job where there is an eight-hour day at 45c to 50c an hour. We have already made a start at nine camps, which are as yet hardly half manned, but have done nothing much up to date, except fight bush fires, which are very serious just now in many parts of Northern Ontario.

With regard to the efficiency of the men this year, I think it will be much like last year. As an example, in one of our operations, where we have now one hundred and twenty-five men, we have paid railway fares since the middle of June for three hundred men, thus turning over the crew more than one and a quarter times in two months. While the lumberjack is unorganized, and cannot very well do so, owing to his drifting proclivities; and therefore cannot go on strike in the way the various unions have been doing, yet he goes on an individual strike quite often.

As to improvements in camps and that sort of thing, we have always kept them up to government requirements, but have not as yet tried the "Alfred Fitzpatrick Plan," which we saw published in your paper some time ago. As our facilities are not yet perfected for moving a whole town, with all the accompanying paraphernalia, such as steam boilers and

tons of pipe, every one or two years over lakes, mountains and swamps, we are obliged to go ahead in much the same old way. The cost of feeding men this season looks like an addition of 20 per cent. over last year, or from \$1 to \$1.10 per day per man, depending upon the location, and also the cook. Wages are now at the highest point they reached last year, namely, \$65 per month and board. They may go higher, and even if they do not, additional cost of all plant and provision for both men and horses will add to the cost at least 10 per cent. over last year.

* * *

Look for Strong Hemlock Situation

The Conger Lumber Co., Parry Sound, report that their next season's cut, which they are now taking out, will be approximately the same as last year, with the exception of the amount of pine. The company hope to have 4,000,000 feet of hemlock and about 1,000,000 feet of pine. Of the latter they took out practically none last year.

Continuing, the company say:—"Regarding operating costs, it now looks as though wages will reach \$65 to \$70 in the bush, which we consider a high figure, although last season was equally expensive. Earlier in the year the wages were down to \$50 to \$60, but as it now appears that some firms of this district are going to operate rather extensively, men are in great demand and the wages going up accordingly. Supplies are very high. Instance the prices on bacon, oats, sugar, etc., all of which have advanced from ten to fifteen per cent. Equipment, too, has reached abnormally high figures, while the prospects of any decrease do not seem to be at all bright. We have this year constructed a new camp in Gibson and are considering the putting in of another small one, our only other camp being in Freeman, which was built last year. Regarding the class of labor we are procuring, we cannot say it is of the best. The large foreign element seem an unstable lot, while the real bushman is such a scarce article as to be almost a man of the past. So far this season we have managed to get the requisite amount of hemlock peeled and the bark swamped, and do not anticipate having trouble in watering either this or the 45,000 pieces of small pine we are taking out. We are expecting a strong hemlock market for 1920 and judging from the rapidity of movement of this year's stock, do not think we will be disappointed.

* * *

What Contractors Got for Logs

A large operating concern of Fredericton states:—"During spring and early summer we found labor quite plentiful in this district, but, of course, during the haying and harvesting seasons men are somewhat scarce, though the shortage is not serious. During the past winter we found the laborer very inefficient, but we look for this condition to improve this fall. As we do not operate our own camps we cannot tell you figures of the cost of feeding men or getting out logs, but could give you the prices paid to contractors in this district. We had one man whose logs cost \$13.50, another, on practically the same chance, \$12.75, and another \$14.90. So you see the figures vary somewhat. In all of these cases we considered the difference to be in management, almost altogether, as provisions, wages, etc., were the same in all cases.

* * *

Will Contract for Most Pulp Wood

The Abitibi Power & Paper Co., of Montreal, say they have not decided how many camps they will open this year but in any event they will be less than last year as they hope to be able to contract for a very considerable portion of the wood they will cut this coming winter. The amount they propose getting out, however, will be less than for the last two years, as they have accumulated somewhat of a surplus during that period. According to the company it does not look as if there will be any appreciable reduction in operating costs or wages. The costs, however, will be larger dependent upon the prices for provisions and camp supplies. If the present high cost of living campaign results in any reduction in the prices of the former, the company state that they will feel the effects, but, in view of all the talk of reduced living conditions and lower wages, they have not experienced the same as yet.

In regard to the efficiency of men, the company opine that as a general proposition this was much below what it was a year ago and, with the present world-wide labor unrest no marked improvement can be looked for, at least for some time.

* * *

All Men Do Not Want Work

One of the largest lumbering organizations in northwest Ontario furnish the following:—We expect to use about 20 per cent. more men this year than we did last, and will probably take out about the same quantity of timber. We do not anticipate any drop in operating costs as supplies will be considerably higher than last year. The labor situation is fair only; there appears to be plenty of men but not all of them are at work. Efficiency is fair. We have made considerable improvements in camps during the last few years.

* * *

Experiencing Decided Scarcity in Help

The Bathurst Lumber Co., of Bathurst, N.B., declare:—Our logging season for 1919-1920 has scarcely commenced yet, as most of the men who usually go to the woods are still engaged on their farms, and will not be ready until about September 1st. We are, however, having a serious labor shortage right now in our sawmills, and our shipping gangs are so short that we are not able to get our lumber and other products loaded, and are fully 50 per cent. short on this class of labor. What few are now coming for the woods are looking for high wages and easy jobs, and we must face a higher wage scale than last year, which we considered at the time a ruinous one. As near as we can judge, there will not be enough men available to get out a normal cut of logs even if all other conditions, such as weather and the health of the men, are good. Supplies of all kinds are fully as high as last year, so we can see no relief in sight so far as high costs are concerned, for at least another year. We are providing hospital accommodation and full equipment at convenient centres to care for our men in case of any epidemic such as we had last year.

* * *

Quality of Labor Should Improve

The J. D. Shier Lumber Co., Limited, Bracebridge, report that they expect to have about the same amount of timber cut as last season, or approximately 4,000,000 feet. "We cannot see where there can be much reduction made in the cost of getting out logs as all lines of camp supplies, with the exception of beef, are higher than last year. Wages will be about the same as last year, but as most of the men who served in Forestry work overseas are now home, the quality of labor procurable should be of a higher standard than that of last year," conclude the company.

* * *

What Other Concerns Are Doing

The Pembroke Lumber Co., Pembroke, Ont., state they expect to operate six camps this year which will be the same number as last year and the product of logs will undoubtedly be about the same. "It is impossible to make an intelligent prediction regarding the probable cost of logs this season. Suffice it to say that wages are as high as they were last year, and foodstuffs and material equally as high. There is no apparent probability of any reduction in cost," add the company.

* * *

Hay and Oats Are Away Up

The C. Beck Mfg. Co., Limited, of Penetanguishene Ont., observe:—Re the situation in the camps this coming season, we are just commencing to start in and anticipate, from present indications, that prices will be as high, if not higher. All foodstuffs are higher and hay and oats are very much higher, so that the cost of feeding teams will be increased considerably. Men's wages will not be reduced to any extent. The biggest loss last year was in not having enough men, and consequently the output was very small, making the overhead enormously high. This year there should be better production, as we should get a better supply of men. A good many of our old hands were drafted in the Forestry Battalion. These will be back and should be as efficient, if

Some splendid spruce logs felled in New Brunswick

not more efficient, than ever. We anticipate taking out about our usual cut if we can get as many camps under way as we contemplate.

* * *

Cost Will Be 10 Per Cent Higher

Austin & Nicholson, of Chapleau, Ont., observe:—We expect that our operations will be about the same this year as last, providing always that men are available. We can see no prospect of wages for lumberjacks being any lower than last year. Some men have been hired at rates a little lower than that prevailing in 1918, but it is our opinion that before the season's work gets well under way, we will be back to 1918 rates. The cost of food and general camp supplies has increased over 15 per cent. over 1918. The chief advances are in pork and dairy products, sugar, dried fruits, vegetables, hay, oats, and all lines of hardware. Men seem to be fairly plentiful, but if anything more unsettled, which means less efficient. To sum up, we would say that as things look at present, the cost of getting out logs will be 10 per cent. above the level of 1918.

* * *

St. John Lumbermen Will Be Active

The St. John, N.B., correspondent of the "Canada Lumberman" writes:—All the mills anticipate going into the woods for a full cut of logs, but no more. Should a depression come about, certainly a curtailment will be made, but should present prices remain in force a larger cut of logs will be made in New Brunswick than a year ago. Wages will be as high as they were last winter, but there will be a greater number of men to draw from. Supplies, such as pork, hay and oats, are higher at the present time, and if they keep at present quotations certainly it will cost more to cut logs than a year ago. Hay is now being held by farmers at \$25 per ton in the barn loose. Pork, green, about 25c per lb. Beef is higher than a year ago, and oats are also up about 5c per bushel. The cut on the St. John River and in Maine will no doubt exceed last winter's by at least twenty to thirty million feet, but manufacturers are certainly not going to overload themselves with logs for anything over the coming year. Just at the present moment plans for logging are not completed, but by the middle of September it will be well known what the St. John river manufacturers will plan to cut. No abnormal cut of rotary sawn stock will be gotten out during the coming winter, although a greater quantity than a year ago will be made, should prices remain firm.

* * *

Much Burned Timber to Take Care Of

The Holt Timber Co., Bolger Bridge, Ont., state that owing to the forest fires a great effort will be made to put in logs from the burned districts. Much of such timber will not reach the market next year. It will be "watered" to save it. The rush to get men all at once and early has resulted in a mad scramble and needlessly high prices. It has also defeated its own purpose by unsettling the minds of laborers and they wonder what is coming next and are waiting to see. The

Holt company will not take out as large an amount of timber as last year and about one-third as much as in 1915-16. Operating costs are likely to go higher as everything in the way of wages, provisions and camp supplies is now starting in at about the same figure as the highest that prevailed last year, and, naturally, things are bound to climb. So far the firm report a shortage of men and many of them are inefficient. The cost of feeding the lumberjack and getting out the timber during the past season was higher than the previous one and will likely ascend during the next few months.

* * *

Cost \$1.20 Each to Board the Men

The logging department of the Genoa Bay Lumber Co., Victoria, B.C., provides the following comprehensive review: We are just starting another camp at Cowichan Lake, which will employ from forty to fifty men. The output during 1918 amounted to 21,000,000 feet, and we have already, to August 1st, taken out 15,000,000 feet this year. As it is our intention to continue operating the two camps for the balance of the year, it is likely that the output for 1919 will exceed 1918 by five or six million feet. The operating costs are getting higher all the time, and so far as we can find out, there is no likelihood of a drop in the prices during the balance of the year. The efficiency of the men is very low compared with 1915 and 1916, which condition we do not think will change until some time in the future when work is harder to get.

"We have made quite a lot of improvements in our camps, viz., the building of the bath house and wash-room, and reading-room for the men. So far as the food is concerned, we have made no changes, considering it our duty to feed the men good food. During 1918 the board in camp was \$1.20 per day, and all the previous years we lost 7c per meal for every meal furnished," continue the company.

"We expect that there will be another raise in wages before very long, as the 50c increase which went into effect on this coast on July 15th only brought the wages back to the basis they were receiving on January 1st, 1918.

"We are giving you an itemized statement of our cost for last year, which we are giving you for your private information in order that you may understand the cost. We may explain that our camp is located twenty miles up Cowichan Lake. We log in the lake, tow to the foot of the lake, and load on cars of the E. & N. Railway. We haul them thirty miles to our booming ground on the salt water at Crofton. From there they are towed to Genoa Bay mill, a distance of twelve miles, or if sold, can be towed to Victoria, Vancouver, or any other point in the Straits of Georgia."

* * *

Have Five Camps Now Operating

Graves, Bigwood & Co., Byng Inlet, Ont., report that they intend to extend greatly their operations in the woods during the coming season and already have five camps at work. Wages of men are about the same as last year, running from \$60 to \$65 per month, but the cost of supplies is very much higher. Oats at their depots cost around \$1.06 per bushel, whereas last year the prevailing figure was 80c.; for hay the company is now paying \$35 to \$38 per ton, and last year the rate was \$20 to \$25. There have also been sharp advances in bacon, barrelled pork, smoked hams, and many other lines, with a reduction in only a few items. The firm believe that the cost of getting out timber will this year average from 10 to 15 per cent. higher than during the past season.

* * *

Believes Good Board Pays Well

J. D. Irving, Limited, of Buctouche, N.B., assert:— We expect to be putting in as many men this year as usual and getting out equally as large a cut for next season. We also purpose installing some small portable mills this winter.

As to present operating and costs, these are about 20 per cent. above what they were last year—that is, with regards to wages in our lumber mills. The cost of equipment has gone up from 25 to 50 per cent., provisions in proportion, during the last few years. The cost of camp supplies has increased about 10 per cent. and we do not anticipate any drop.

With regards to labor, we think we are about the same as everywhere else. There is an abundance of labor, but it is a very difficult question to get it harnessed. We had a strike in our lumber mill a little over a week ago, but made no concessions, and all the crew we are willing to accept are back again. We endeavor to keep our camps as clean and wholesome as possible, as we always find it enables us to get the best class of men, and the better men we get the cheaper the labor. We always try to have running water in our camps, have them well heated and lighted, and divided up into one or more buildings, as the more homelike the camp is the more satisfied the labor. As to the feeding of the men, it costs us about 80c per day per man. We find it a paying proposition to give them lots of sweets, such as pies and cakes, more particularly the first week they are in the woods. As yet we are using horses for handling our lumber, but are considering tractors, and would like to have your views regarding the matter, or anything you can give us. We have here on an average of from two to three feet of snow and our logs haul from three to six miles.

* * *

Are Well Equipped with Labor

The Brompton Pulp & Paper Co., of East Angus, Que., remark:—We anticipate getting our usual cut of wood this coming winter. The present outlook, however, is that it will cost considerably more this year than it did last. We are fully supplied with labor in this district at the present time.

* * *

Will Take Out the Same Quantity

The timber director of a large pulp and paper concern in Montreal says:—We are sending the same number of men to the bush this season that we sent last year and intend taking out about the same quantity of timber. Wages are about as last year. Provisions and camp supplies are slightly higher and we do not anticipate any drop in these items. The labor situation in this district so far as men and their efficiency are concerned is unchanged from last season. Men at the moment are not plentiful, but we anticipate no difficulty in getting the number we require.

* * *

Too Much Talking on Labor Matters

The New Ontario Colonization Co., Limited, of Jacksonboro, Ont., are of the opinion that quietude would reign for a while in the ranks of labor if less publicity and agitation was carried on through the press and less talking done by employers of labor. Just at present they think that the less said the better regarding wages, efficiency and the future. Regarding how long the period of adjustment will require the company report that it can only surmise and, in the meantime, they propose to put in their best efforts to aid in the adjustment and restore conditions to normal.

A busy logging scene in Nova Scotia woods

Importance of Interior Finish in the Home

The Potent Desire of People to Have Their Places of Abode as Attractive as Possible— Evolution in Style and Ideas—Demands of the Future

By Charles J. Brooks, Toronto

Charles J. Brooks, Toronto

A good many of those who read this article will remember a time, not so many years ago, when the interior woodwork of the average house was "grained" usually in imitation of quarter sawn oak. The effect was a good deal as though a bunch of polliwogs had wiggled at random through the paint before it had dried, finally to get stuck and expire, leaving sundry blotches to indicate the fatal spots. "Grained" finish belongs to the past and may be pointed to as an illustration of the fact that the beauty of nature cannot be successfully imitated by man.

The wood on which these fantastic creations of the old-time painter were perpetuated was usually white pine or spruce. Sound knots were not an insuperable defect, as a daub of shellac

over the knot would make a surface to which the paint would stick. And so the potent desire in the bosoms of women and men to have their place of abode as attractive as possible, was in some measure satisfied.

The passing of the "grained finish period" in interior decoration was largely determined in Ontario, at least, by the introduction of Southern Yellow Pine. Here was a wood which, at a moderate price, provided a much more attractive finish with considerably less trouble. The natural grain and the natural color could be made a permanent addition to the beauty of the home. And while man was not successful in imitating nature in the production of natural effects, working on a beauty already provided he was able, by means of stain and varnish, to intensify and perpetuate that beauty. Thus "grained" finish departed and Yellow Pine reigned in its stead.

The Passing of Yellow Pine

It appears at this time that the day is not far distant when the passing of yellow pine finish will also be duly chronicled. Forestry reports indicate that the lumbermen of the South have gathered the harvest of the forest perhaps not wisely, but too well. That within a very few years yellow pine will cease to be a prominent factor in the streams of lumber which flow, impelled by the gravity of economic forces, hither and thither across and up and down this continent. The fact that it is estimated that well within the next ten years over 3,000 southern pine manufacturers will be obliged to close up shop on account of exhaustion of timber supply is significant, foreshadowing a continually diminishing volume and, as a natural consequence, a progressive reduction in the radius of distribution.

The "heir apparent" already beginning to be in evidence is British Columbia fir, whose contribution to the home's attractiveness is greater even than that of its beautiful southern contemporary. While a good deal similar to yellow pine in many respects B. C. fir presents a more pleasing appearance in grain effects, which are brought out more prominently by its greater adaptability in the way of taking stain.

The Popularity of Fir Finish

Fir finish has already come very largely into use in Eastern Quebec, New Brunswick and Nova Scotia, in other words, in those sections where distances from the producing centres and, consequently, a more even break in freight rates, have given a fair field, and no favors in the matter of southern pine competition. The geographical situation of Ontario, with respect to the yellow pine producing areas, has been greatly in favor of that wood holding its own in this market. Just now, however, when the southern manufacturers have more business than they can handle, nearer home, and aided to some extent by the adverse exchange situation, fir finish begins to move more freely into Ontario, indicating very clearly, when one keeps the general lumber situation on this continent in mind, what is to be the

standard trim for the average dwelling here in the days that are to come.

Undoubtedly there will be further movements of yellow pine finish to this market. But, with an enormous home demand assured for the next few years, with prices that may well be depended on to stimulate further exhaustion of the yellow pine forests; and with a large enforced curtailment of production already in sight, it does not require the spirit of prophecy to predict that, within a very few years, B. C. fir finish must occupy the place of yellow pine in the homes of Ontario.

Looking to Future Requirements

In closing, I think it might be advisable to call attention to an instructive and attractively illustrated publication, which was issued a considerable time ago by the Forest Branch of the Department of Lands, entitled "How to Finish British Columbia Wood." This booklet has enjoyed wide distribution, and now that building operations are being carried on so extensively, it will no doubt be in greater demand than ever. The comprehensive work is designed to bring to the attention of wood-finishers, builders, architects, and prospective home-makers the desirability of selecting British Columbia woods for interior finishing of their homes, offices, and other buildings. It also gives instructions as to how the wood should be surfaced, stained, varnished, or painted.

Western woods are remarkable for their excellent wearing and time-resisting qualities. They have a beautiful figure and are especially suitable for inside and outside finish. Two entirely different styles of figure are possible. From lumber sawn flat-grained is obtained a beautiful watered-silk effect, and from that sawn vertically a restful, pleasing edge-grained effect. A cedar panelled room finished in wax polish with an edge-grained Douglas fir floor, natural shade, is a delight to behold, combining as it does, comfort, beauty, and durability.

Wood improves in appearance with age. Plaster for walls in many cases, is but a cheap and inefficient substitute for panelling or other form of wood covering; it is easily damaged, difficult to repair, is almost impossible to clean, and requires periodic decoration to give a presentable appearance. Wood has none of these disadvantages. Keep your floors and panelling clean and their beauty and usefulness will be more apparent every day. The various finishes, oil, stain, varnish, or polish, on woods serve to bring out the grain, protect the surface against wear, and enable it to be easily cleaned.

Handy New Oil Pump on Market

The Hamilton Motor Works Co., Limited, of Hamilton, Ont., have recently placed on the market a Hand Oil Pump. With this pump any desired quantity of oil may be drawn from a barrel and its use does away with oil soaked floor and waste of oil. The pump has two adjustable stops so that it can be set to pump any desired quantity up to one quart. There is a lock with two keys provided so that the apparatus can be locked up. The pump is supplied complete with suction pipe reaching to the bottom of the barrel and with bushing screwed for 1½ in. pipe tap, which is standard in steel barrels. The Hamilton Motor Works say that the same bushing can be used to screw into a wooden barrel if desired.

Labor Troubles in Eastern Mills

Practically every sawmill on the Miramichi River was closed down recently owing to a strike among the workmen. The firms involved were John Maloney; Jas. Robinson, O'Brien, Limited; Wm. Sullivan; Sinclair Lumber Co.; D. J. Buckley; John Burchill & Sons and D. & J. Ritchie, employing in all about 1500 men. The men secured a nine hour day.

The men engaged in loading ships at Nelson, Newcastle and French Port Cove on the Miramichi River struck recently for a 9 hour day and an increase in wages. They have been working for 55c an hour in the hold and 45c on the outside. The demand is for 65c inside and 55c on the outside and a 9 hour day. A deadlock resulted for several days as the employers were quite willing to grant the increase but not the shorter day.

Glimpses of Logging and Camp Life in British Columbia

In the accompanying illustrations are presented several representative scenes of the timber wealth and logging operations in British Columbia. The views are exceptionally clear and afford some idea of the extensive character of the lumber industry in the Pacific Coast Province.

In the first row, from left to right, are seen a logging railway and up-to-date logging camp, an extensive rock cut and a trip on a logging train.

In the middle row, from left to right, there is witnessed the operation of loading the logs, and then comes a floating bridge connecting the camp with the foreman's house. In the next "snap" William Henderson of Toronto, superintendent of the Shantymen's Christian Association is observed seated on a log. All these logs were part of the slash burned during the night that the picture was taken. The

next view shows a typical camp on the lake, all the hillside being on fire caused the smoke in the rear.

In the bottom row are five gentlemen all actively participating in, or sympathetic with, the work of the Shantymen's Christian Association. From left to right is Rev. Oswald J. Smith, late associate pastor of the Dale Presbyterian Church, Toronto, (who is now engaged in work on behalf of the Shantymen's Christian Association in British Columbia); Wm. Henderson, of Toronto, superintendent of the Shantymen's Christian Association; J. Mathieson and Alexander Weir, missionaries of British Columbia; Wm. Sharpe, president of the Pacific Box Co., Vancouver, who is a director of the S.C.A. in that Province. Next to this party is a train load of logs and in the lower right hand corner (seated) are Messrs. Mathieson, Smith and Weir.

Personal Paragraphs of Interest

J. B. Gregory, manager of the York & Sunbury Milling Co., Fredericton, N. B., has been ill for some time and not able to attend to business.

C. A. Morin, of L. P. Morin & Fils, St. Hyacinthe, Que., spent a few days in Toronto recently calling upon the members of the lumber trade.

W. W. Carter, president of the Fesserton Timber Co., Toronto, and family, who have been spending several weeks at their summer home, Honey Harbor, Georgian Bay, have returned to Toronto.

A. E. Eckardt, of the R. Laidlaw Lumber Company, Toronto, has returned to his desk after spending several weeks at Rosseau, Lake Muskoka, where he became an enthusiastic golf player.

G. H. Askwith, of the Riordon Sales Co., Montreal, is calling on the New York lumber trade in the interests of his company, who are large sellers of spruce by barge shipments.

R. N. Bates, of Ottawa, vice-president and managing director of the International Land and Lumber Co., is on a business trip to England. He is expected home about the middle of September.

Charles H. Russell has been appointed president and H. C. Campbell, vice-president, of the Charles H. Russell Co., Ltd., wholesale lumber merchants, Montreal. The company was recently incorporated to take over the business of Mr. Russell.

George C. Hurdman, M.P.P. for West Ottawa, who is a widely known lumberman, has again been nominated by the Liberals of the Capital to contest the riding at the next provincial election in Ontario.

Brigadier-Gen. J. B. White, of the Riordon Pulp & Paper Co., Ltd., Montreal, took part in the great welcome given in Montreal on August 21 to General Sir Arthur Currie on his return from overseas. A detachment of the Canadian Forestry Corps formed part of the parade.

Maurice Welsh, of Campbell, Welsh & Paynes, Toronto, has returned with his family from his summer residence at Bobcaygeon, Ont., to his new home, 56 Glenholme Ave., Toronto. Mr. Welsh reports that "the twins" reached the city by motor in fine form and had a most pleasant holiday.

Robson Black, of Ottawa, secretary of the Canadian Forestry Association and Wm. B. Stokes, of the Forest Products Laboratories, Montreal, spent a few days in Toronto recently supervising the splendid exhibit jointly made by these organizations in the Railway building at the Canadian National Exhibition.

L. C. Fisher, one of the Eastern representatives of the British Government Timber Buyer, is on a visit to Vancouver and Victoria in connection with the shipping of the government lumber. He will also visit Seattle and other U. S. ports. Mr. Fisher expects to leave for England early in October.

John Millin, 517 Crawford St., Toronto, was killed by lightning in his home during a recent severe electric storm. He was at his evening meal when a bolt struck the house. Mr. Millin was a carpenter, and his shop was where he lived. He had recently bought some timber limits and a sawmill near Parry Sound, and intended going north to reside.

H. A. Stewart, formerly of Buffalo, who for the past year has been manager of the hardwood department of C. G. Anderson Lumber Co., Toronto, left recently for Manilla, Philippine Islands, where he will supervise the manufacture and shipping of mahogany for the firm of Black and Yates of New York City, who specialize in this kind of wood. Mr. Stewart's many friends wish him every success in his new position.

Ralph E. Alling, representing the Wapskehegan Lumber Company, of Wapske, N. B., was in Toronto recently on a business trip and called upon a number of wholesalers in the interest of eastern spruce. Owing to a shortage of cars the shipping arrangements to the Eastern States have been somewhat interrupted and Mr. Alling's firm hopes to build up a strong connection for its products in Ontario.

Ex-Mayor Frank A. Kent, of Meaford, now of Toronto, who is general manager of the Seamen-Kent Co., Limited, recently took his initial trip in an aeroplane. The first aerial mail service out of Meaford occurred on August 20th when Mr. Kent left on a flight in company with an aviator who gave an exhibition of his skill in that town. He thoroughly enjoyed the rapid passage through the air.

Martin Valiquette, of Quebec, a forest engineer, lost his life recently in the northern wilds. He was drowned while surveying the forests on the shores of the Gulf for the Provincial Department of Lands and Forests. Had it not been for the prompt action of a guide who was following the canoe in which were Valiquette and others, two

A basswood tree at Penetanguishene, Ont., which cut out 2,500 ft. of lumber. W. J. Martin is seen standing beside the tree

more deaths would have been added to the tragedy. The guide, Alf. Perrion, of St. Felicien, Lake St. John, struck out in the rushing waters of the river and rescued two of the men.

Frank F. Fish, Chicago, secretary-treasurer of the National Hardwood Lumber Association spent a few days in Toronto recently calling upon a number of members of the trade. Mr. Fish states that the American Hardwood Lumber Association has officially adopted the Inspection Rules of the National Hardwood Lumber Association, so that for the first time in nearly twenty years there is only one standard for the official inspection and measurement of hardwood lumber. This action on the part of the American Association will not in any way change the present policies of N. H. L. A.

Daniel J. Driscoll, a widely known wholesale lumberman, died recently at his home, 143 Gloucester St., Ottawa, in his 70th year. He had resided in the Capital since 1898 and in his commercial dealings was well known throughout all parts of the country. Mr. Driscoll was highly respected in business circles and was 70 years of age. Born in St. John, N. B., where he first entered the lumber business he followed it all his life. In St. John he carried on an extensive export trade for a number of years. Many old friends in that city will learn of his death with keen regret. Mr. Driscoll is survived by his widow and one son, Geo. F. Driscoll, of Montreal, who is prominent in theatrical circles.

Wm. Robertson, of Victoria, B. C., who is in charge of trade extension work in connection with the Forestry Branch, Department of Lands, is spending a few days in Toronto. Major James Brechin, B. C. Lumber Commissioner for the east, and Mr. Robertson are supervising the splendid exhibit of Coast and Mountain products which is being made in the Canadian government building at the Canadian National Exhibition. The display is a representative one in every respect and was brought east by Mr. Robertson. It is possible that, after the Exhibition, arrangements may be completed to have the various lines shown remain as a permanent exhibit in Toronto. Sergt. Robertson was a member of the Canadian Forestry Corps and was overseas for a considerable period. Previous to that he was located in Vancouver and had been identified with the Rat Portage Lumber Co., Kenora, Ont., for some 20 years, filling the position of assistant general manager.

Upward Scale of Camp Supplies

How Costs are Climbing Constantly on Many Commodities that are Daily Served Up to Lumberjacks

The cost of nearly all camp supplies is constantly on the increase. This is a broad statement to make, but a comparison of the prices paid for commodities previous to the war and four years later shows advances ranging from 75 to 150 per cent. In the 1918 Camp and Supply Number of the "Canada Lumberman" a comparative table was published of the average figures. In this edition the prices have been brought down to date and it will be observed that the trend of disbursements is still upward and on many articles of diet there has been a decided advance.

The figures have been obtained from reliable sources and are an index of how the camp commissariat is annually becoming a more serious problem and contributes in no small measure to the increased expense of logging.

The question is often asked "when will lumber take a drop." It certainly will not come about until the pendulum of values swings in the other direction and the cost of rations begins to descend. Just when this will occur one man's guess is as good as another. In the meantime, there does not appear on the horizon any visible omens of relief from the present stringent situation.

Ottawa Valley Will Double Log Output

A considerably increased woods cut for the season of 1919-20 with possibly a decreased sawmill cut for 1919, as compared with the previous years, is the best outlook one can predict for the production of the Ottawa Valley.

Attempts to double last year's log output in the woods is being generally made by the lumbermen and operators. In doing this it is pointed out that twice the number of hands will not be required, as last year many of the workers lost considerable time through being ill with the "flu."

The attempt to double the production of last year has been made necessity of getting down more logs and replenishing their reserves. the heavy drawing on reserves of logs and sawn lumber which are usually always kept ahead by most lumber manufacturers.

Stocks at the present time are low on the Ottawa lumber market particularly dry stock, and there is no great amount being held back of this year's cut by the manufacturers. To meet the demand which

the manufacturers believe will arise next year, the lumbermen see the necessity of getting down more logs and replenishing their reserves.

The labor situation as gauged by the number of men offering is very satisfactory at the present time, but the rub comes when the question of efficiency is raised. Many men now offering themselves for bush or camp work were formerly employed in munition plants or in other jobs during the war. Numbers have little or no experience in log manufacture. Others want to go to certain camps, many of which are already filled and if they cannot they prefer to stay in the city or at home.

This consequently makes the situation all the more complicated, but advices to the "Canada Lumberman" indicate that there is not at the present time any anticipated shortage of woods labor. Wages run all the way from forty-five dollars per month for the inexperienced hand to sixty-five dollars for the old woodsman, with board.

The outlook all around seems favorable for a good season's operations and with an even break with the health of the camps keeping up and a fair standard of labor being available, there is not much doubt being expressed that the lumbermen will not be able to "double up."

The number and size of the camps are being increased. Operations toward getting the men into the camps in August indicated that they would be well filled and stocked promising a good season's operations.

The Pioneer Saw Mill in Northern Manitoba

The Finger Lumber Company, Limited, is the pioneer in the lumber industry in Northern Manitoba, that vast stretch of land hitherto considered as the Frozen Hinterland. With the advent of the Hudson's Bay Railway people are learning differently and the so-called frozen waste is now considered the richest part of Manitoba, as it is rich in mineral wealth, fish, fur, water power and lumber.

The Finger Lumber Company, Limited, commenced operations in the Spring of 1912. Its plant is located on the Saskatchewan river at the town of The Pas, Manitoba, which is the western terminus of the Hudson's Bay Railway. The Company owns extensive timber limits along the Saskatchewan and the Carrot rivers. Its logging thus far has been conducted on the limits along the Carrot river, where a number of camps last winter were operated. The logs are driven down the Carrot river into a storage boom located where this river empties into the Saskatchewan. They are then towed from this storage boom to the saw mill by the company's own tugs.

The mill is now equipped with a circular and gang, but as soon as conditions warrant it, it is the intention to increase the capacity considerably. The capacity now is 25,000,000 feet annually. This output is mostly spruce, there being only a sprinkling of cottonwood and tamarac. Carrot River spruce is considered high quality; has fine texture and compares favorably with white pine. The lumber is hauled from the sorting works to the yard by rail, and the planing mill is equipped with modern fast-feed machines and resaws.

The company operates its own electric light plant, and the motive power for both the sawmill and the planing mill is steam.

Most of the company's product is marketed in the Prairie Provinces, but during the last few years it has developed a market in the United States, where it is shipping as far east as New York City.

The officers of the company are: President and manager, H. Finger; vice-president, H. S. Smith; secretary-treasurer, W. H. Miner.

Thirty million feet of logs in the Miramichi river, N.B.

When Duty on Saw Logs Was Live Issue

Editor "Canada Lumberman".

Sir:—Feeling, as I do, the serious importance of the timber question to the interests of Canada, and desiring to assist, as far as in my power to do so, those who are advocating the preservation of our forests for the benefit of our own people, I have to say that on looking over some of our family papers, I found that on June 5th, 1851, the Toronto "Globe" had a long article headed "Duty on Saw-logs," based on a letter written by my father, James Little, who was then carrying on extensive lumbering operations from Caledonia on the Grand River, where he operated fulling mills and sawmills, being one of the first to export lumber in quantity from Canada to Buffalo, Albany, Cleveland, and Chicago.

You will see by an article published in the "Lumberman," thirty-one years later, December, 1882, that Sir Henri Joly de Lotbiniere ably supported the views advocated by my father,

Gratefully yours,

William Little.

101 The Boulevard, Westmount, Que.

Under the heading of Duty on Saw Logs the "Globe" of Toronto, in its issue of June 5th, 1851, publishes the following article:

"Mr. James Little, the extensive pine lumber manufacturer of Caledonia has sent us a communication in reference to our remarks of last week on the proposal of the Middlesex County Council to lay an export duty on sawlogs. Mr. Little complains loudly of our statement that a good pine log will yield 1,500 feet of lumber, but he might have seen that this was a pure error—that we should have said a good pine tree will contain that quantity of lumber. But Mr. Little refers to other points and gives us some valuable information on the lumber merchant's side of the argument. Referring to our statement that "the best pine which a few years ago brought but \$8, \$9 and \$10 per thousand feet, now sells readily for \$16 for the Albany market. The cost of sawing is not more now than it was when the price was so much lower, therefore the prices of saw-logs should have greatly risen, but have not done so—, Mr. Little says: "The three upper qualities of lumber have for many years back ranged at less than from \$10 to \$12 per thousand feet, and all under these descriptions were higher when I first came to the river, seventeen years ago, than at present. At that time logs which now fetch a dollar and a dollar and a quarter did not bring more than from 1s. 3d. to 1s. 10½d. (=25c to 37½c) each. The description of logs now bringing from a dollar and a dollar and a quarter each, will only saw out 300 feet, and if we get a third or a fourth of clear out of the number of feet the log makes we are more than satisfied; indeed one-sixth is fully an average of these descriptions—so that you will see the quantity of clear dwindles down to less than a hundred feet. With reference to the cost of sawing, wages are higher, as are also coarse grain, hay and other feed for teams than the time you speak of.

Mr. Little next refers to our statement that "the Canadian manufacturer has a great natural advantage over the American, which should be quite sufficient,—he saws the logs on the spot, selects the best for the distant market, ships it in beautiful order, and pays no freight on refuse. The American manufacturer, on the other hand, pays freight on the tree with all its refuse, is exposed to much loss

and trouble in the transport, and brings his timber to market in inferior condition."

And on this Mr. Little says: "If, sir, you would just reverse the whole of the above you would exactly have the truth. The Canadian manufactures on the spot, and carries his lumber in wagons, scows and vessels to market, with a deterioration in its quality which cannot be estimated at less than a dollar per thousand feet on every handling on the upper qualities, ships in "inferior order," and is met in the American market with an ad-valorem duty of 20 per cent. on sawn, and 30 per cent. on planed lumber, has commissions to pay for receiving, measuring, shipping, inspecting and selling. The American manufacture, on the other hand, floats his logs down the stream, rafts them at its mouth, and tows them across the lake (You surely don't suppose he freights his logs in vessels) for one-half the cost of transporting the lumber—pays an ad-valorem duty on logs, which is a mere trifle—saws them and disposes of his lumber at home, without any deterioration in quality from frequent handling, in "beautiful order," without the several commissions the Canadian manufacturer has necessarily to pay."

(From the "Canada Lumberman," December 1882.)

Hon. H. G. Joly de Lotbiniere, of Quebec: I cannot understand why there should be any doubt as to the wisdom of imposing an export duty on our logs. Many of those who with the hope of promoting their personal interests, advocated at one time its removal, are now in favor of its re-imposition. But let us look at the question as it affects the country at large. In giving us our forests Providence has given us a source of wealth which it is our duty to husband carefully and to turn to the best account. It is possible that we Canadians should have so little manliness left as to tell our neighbors: Come, cut down our trees, take them away, manufacture them at home and reap the golden harvest. We don't want it. We have got work enough to occupy us here. What would have become of England if she had invited the world to come and take away her coals and iron and manufacture abroad? We ought to treasure our forests. But how much more ought we to treasure the youth of our country, leaving us every year by thousands to seek work in the United States? Shall we force those who still remain with us to leave us, too, by sending the raw materials, the logs, in the manufacturing of which we can procure work for so many? Send away our logs to the States and our mill-hands will follow them. In other words, while we cannot find employment at home for our own workmen, shall we provide work for those of the United States? Our neighbors want our lumber, they must have it, they threaten us with the imposition of higher duties if we insist upon manufacturing our own timber at home. We cannot complain, it is their right. Perhaps they may carry out their threat. As one interested in the exportation of sawn lumber to the United States, and naturally anxious to enter it there under favorable conditions, I appeal to those who are answerable for the welfare and prosperity of our country. I implore them to keep our logs here, and with our logs to keep here those who will earn their living by working them, and should I be called upon to pay a higher duty for my sawn lumber exported to the United States, I will then pay it cheerfully.

See De Style Put On By De Chantierman

Editor Lumberman Canayenne.

It are mak me much soree Im not to on ma house w'en you come on Lac au Loup las w'ik. You see, I can' be on de house w'en Im be on de bush, an dats sure t'ing.

We are ope de camp now an have place a couple jobber. Im expec ope couple more jus so soon Im get de mans an cook, an mebbe two, t'ree wat you call "valet" for de mans.

Ba Gosh, dats mak me laff, wen Im not angree, for see de style wat are put on by de "chantierman" dese day, an it soon be we have get recommend before d'ey come work for us.

Im tel you Mon Ami, dere are beeg change tak place on our beezness on las few year an it cost much monee too.

Ma ole fadder he tel me he work, wen he be yong mans, for \$9.00 mont an he bring hees own tea on de chantier too.

D'ey are not have any "gadondar," wat you call him, cross saw, on dose tam an he fall de beeg pine wit de axe an cut her on de log same way. Dats some job too, wen you tink de size dose ole pine tree. He are hire for de "run" which means he go up one summer an return on tam for go up nex' summer. A good steady job an las all de tam.

Den I 'member meser, run one small camp, an de bes pay are \$18.00 mont. We have one cook an he cut his wood for his sef an Im hav it haul on de camp for heem.

Get More Appetite for Eat Agen

Dose tam were better for mak de log as now, for good many reason. One reason were de strong grub we eat, pork and bean, pea soup an molasses an de good bread wat are mak from real flour. W'en a mans have fill hersef wit dat sort de grub, he wan do something pretty queek an he jump on de log an work her off. Den he get more appetite for eat agen.

On dat tam Im mention, we have de good mans wat are work all de tam on de bush an not bodder with nodder kin' work. He not have much ceremonee wen he eat, an are satisfy for he'p hersef wit de dish an knife an spoon, an den go on de pot for fill her up. He tak a place on a bench an eat with de good conscience. He sl'ip well an work well an are good fren for have aroun wen troub come for bodder you, an he have excuse for tak leetle drink between job jus for get rid some dat grease wat are not diges'.

Wn we begin talk about de "chantierman" wat are work for us today dats annuder storee an mebbe praps you know better as me how she are. An you begin tink, Caspar are talk through her hat an are gone try give you lecture on "Troub' on de Camp," an "W'y de logs cos' so much dis year."

No Sir, Im not give you lecture for good reason. De Boss have visit me few w'ik ago an have give me lecture on how Im gone get out more as quarter million piece de log wit'out it cost me more as las year.

De Boss are good feller, an we are de good fren but he mus be cowboy on one tam, for he handle de bull lak he were 'custom.

Wen Im hope de firs camp dis year, it were easy for get de good mans for Im place mos ma neighbor on it, but wen Im try for get de mans, bout forty, for season camp, it are nudder ting an Im have sen notis everyw'ere an say we wan' de "chantiermans" an dat we pay de good wage for experience mans.

Say He Are Wan Job on de Bush

One feller come on me an say he are wan job on de bush an aks me how much Im pay. Im tel her we pay jus so much lak nudder company, but he mus mak de wage now so Im tel her \$50.00 mont an board. He say he tak job for few day an if Im have good camp he stay for wile anyway. Im hire her an sen her on de camp wit nudder mans an wen Im go on de camp for see how it are go, Joe Larocque wat are foremans, tel me bout dat feller.

He say he arrive on de camp an go on office an see de "commis" wat are kip de book. Den he go on de chantier an look aroun' an come out agen. He go on commis agen an say he no lak stay on chantier an aks for bed on office. De commis tel her de office are for hissef an de foremans, also for de culler an de visite, an aks her wat

are wrong wit de chantier. De mans say we not have de spring bed, an pillow mak wit de fedder. An, nudder ting, he not use slip wi nudder feller an wan bed for his sef.

De commis are pretee smart yong feller an he lak have joke once a w'ile. He aks dat mans have he bring "valet" wit her an how often he get her nail manicure but it no mak de laff. Dat feller were serious. He say he are use have de spring bed, d pillow an de sheet, an dat he are custom tak bat' once a w'ik. He also say he not custom wash hees clothes but are have it done for heem jus lak we live on city.

Now, how you lak dat, ma fren? An it are a fac dat feller wat are use have a bat' on de chantier once a w'ik, are good mans too an can mak de log with nudder mans an are better as mos mans on Joe Larocque's camp. He are not kicker but are custom have good accommodation w'ere he work.

On our camp we have de good bed. We not have de spring bed but have de straw mattress an pillow, an de chore boy he mak de bed each morning an swip de camp. He kip de place clean an wen it are cold he kip good fire an lots de wood. We not have a place for bat' but who wan tak bat' wen it are cold wedder? An for wash de clothes, it are not verree hard work was a few socks an mebbe some nudder clothes once a mont'.

De Tam Have Change in de Chanty

Anyhow, de tam have change an Im spose we have change too if we wan' kip our mans.

Im not mention de cookery w'ere de cook are boss but dats mos importan place too an we have de good table an bench an lots de dish an knife; an de fork also, den we have two cook an chore boy an some cook dey wan a boy for wash de dish an peel potatoe.

Yeh, De Boss have visit me before we ope de camp an we go on de bush on ma las' year cutting. We stop on de camp an have a bite an after we smoke a wile de Boss he say "Caspar, you smoke verree strong tobac dis year. Were you get him?"

Im say Im raise her mesef, las year but it are not too strong. "Well," he say, "it smell strong anyway," an jus den we see a skunk come on de door an de Boss he say "w'ere we go from here" but not give me chance for tel her for he go through de window an Im fin' her bout quarter mile below de camp wen Im get chance for come out. Im tink dat skunk have loss her mate an imagine he have foun her wen he smell dose cigaret de Boss are smoke.

Anyway, it are gone cost someting for mak de log dis year an you feller wat are live on de city an are buil' de house, gone pay for de bat', an spring bed, an wash de cloes ann few nudder ting' wat are need on de bush now.

Tam have change an mebbe it are bes we not eat de strong food now for it are hard get a drink an we have notting for help us diges our food excep' work, an no one wan' do dat needer.

Bien a vous,

CASPAR LAMARCHE.

Lac au Loup, Que., August 21st, 1919.

Moving Picture Film of Timber Test

"Timber Testing at the Forest Products Laboratories of Canada, McGill University" is the title of a film that will be shown throughout Canada and is of considerable educational interest. The cinematographer of the British Canadian Pathe news recently photographed the first movie taken of showing work in progress as conducted at the Forest Products Laboratories of Canada, 700 University Street, Montreal. The film shows a test to determine how much weight was required to break a structural timber measuring 8 inches by 16 inches, by 16 feet long. The test piece was purchased from a local timber firm and was of Douglas fir. The British Columbia Forest Service desired to have exhibited at their section of forest exhibits of the National Exhibition, Toronto, a full-sized beam of Douglas fir as used for structural purposes, showing how it breaks and what weight it will carry. The Forest Products Laboratories of Canada, which has frequently made strength tests of various kinds of Canadian woods, reports the break occurred at 58,450 pounds in this case.

No Prospect of Lower Prices in West

By George B. Cross, New Westminster, B. C.

Prices of all house building lumber are high and still advancing. This is accounted for by the great building boom now on throughout the length and breadth of the United States and reaching into Canada.

The amount of house and farm building throughout Canada and the United States really controls the prices of that class of lumber. There is no prospect of lower prices for the balance of this year, or, at least, until the snow flies, and every indication points to high prices for 1920. There will be two or three months during the winter, perhaps beginning with December, when it may be possible to lay in a stock at somewhat lower prices than are in effect to-day.

It is probably well known to many of your readers that the British Columbia Coast Mills produce another class of lumber, viz.: timber, 8 x 8 in. and up. Without orders for such timber the mills are at a disadvantage in operating; first, because the heart of the log is much better fitted for timber, railway ties, etc., than for cutting up into lumber; and secondly, the capacity of the mill machinery, the trimmers, planers, sorting tables, etc., is usually arranged to take care of only about 50 per cent. of the cut of the mill, the balance going out in timber.

Owing to want of lumber carriers for the foreign market, and to the small domestic demand for timber and the stoppage of ship-building, timber has not advanced in price since last year, nor is it likely to advance until more ships are available. Railway companies are, therefore, securing their supplies of ties and timber at very favorable prices.

There is increased demand for Pacific Coast lumber for industrial purposes, such as doors, veneer, agricultural machinery, pianos, cooperage, crating, etc., and we hope to retain this business when the lumber business gets back to normal in other lumber centres.

No Reduction in Cost of Logging

By Wm. G. McKay, Madawaska, Ont.

The war is now over and the food regulations are somewhat modified. However, the rationing in force during the European conflict did not work any hardship on the men boarding in the lumber camps, as ample food of the various kinds was allowed and no complaints were heard either as to quantity or quality.

Now that the war is ended and conditions are on the way down to normal, the cost of provisions and board varies but little from last season. The only article of food used in the camps to any extent, in which there is much difference in price, is beans, they having dropped from \$7 per bushel to \$4.50. All other provisions remain much the same as last year, some slightly higher and some slightly lower. Flour is about the same, meat, in some cases, a little higher, and cheese is up about 3c per pound; so, when all is figured in, board will cost as much as last year.

Labor conditions are unsettled, the men being restless and moving around from one place to another. Wages are somewhat lower but not very much, the men being hired from \$50 to \$65 per month, the most of them getting the latter. Cooks, handy men and foremen are receiving more than at the same time last year. The quantity of work done is about the same, but more supervision is required to get it carried out as well as other seasons, which makes it harder for the men in charge of the operations.

Conditions may be somewhat better as far as the men settling down to work are concerned when the regular logging season comes in, about the 1st of September. During the summer months the hot weather, along with flies, makes it harder to keep men. I have not had much difficulty in keeping my camps full, as I have from 85 to 100 men in each camp.

It is pretty safe to say that the cost of logging will not be any lower than last season, unless conditions change very materially from what they are now. In regard to hiring men by the day in the lumber camps I have not given this very much consideration. I do not believe there would be very much gained in changing from the present plan of engaging them by the month.

Thinks West Should Move More Rapidly

That there are great calls for British Columbia lumber in overseas markets, and that B. C. lumbermen have failed to take anything like full advantage of their opportunities to secure big business there, is the opinion expressed by Sir Douglas C. Cameron, former lieutenant-governor of Manitoba, and president of the Rat Portage Lumber Company, who was recently in Vancouver.

"There are markets for British Columbia lumber, but the Vancouver dealers have not gone after them. It does not create a favorable impression to find that the order for 70,000,000 feet of lumber for Britain has not yet been moved," said Mr. Douglas.

That there is a great demand for British Columbia lumber in various parts of the States, was also stated by Sir Douglas, who added

that the possibilities for the development of the lumber trade from Vancouver were very great indeed, and the outlook satisfactory in every way.

Correct Moisture Content of Lumber

Shrinking and swelling of wood, as well as warping and twisting, are caused by changes in moisture content. Such changes always take place when the wood is not in equilibrium with the surrounding atmosphere. This state of equilibrium depends mainly upon the humidity of the air and to some extent upon its temperature.

Knowing the average temperature and humidity of any given region, as given by the Weather Bureau records, it is possible to determine the moisture content of wood corresponding to these conditions. Wood dried to this moisture content will undergo the least possible amount of working in that particular region.

The following table, compiled from data secured by the Forest Products Laboratory of the U. S. Forest Service at Madison, Wis., shows the moisture content in wood corresponding to various temperatures and humidities:

When relative humidity of air is Per cent.	—The moisture content of "dry" wood is—		
	At temperature of 70 deg. F. Per cent.	At temperature of 140 deg. F. Per cent.	At temperature of 212 deg. F. Per cent.
20	4.5	3.3	2.2
30	6.0	4.5	2.9
40	7.7	5.9	3.9
50	9.3	7.1	4.9
60	11.2	8.8	6.2
70	13.5	10.7	8.0
80	17.0	14.0	10.5
90	22.2	18.2	14.0
100	32.0	26.2	21.0

Airplane Forest Protection is Success

Protection of forests by airplanes, said Mr. G. C. Piche, in charge of the Forestry service of the province, has proved very effective, and he added, as soon as this new system proves to be possible in all regions of the province it is understood that it will be exclusively adopted.

"There has been a marked improvement this year in the protection of forests in the province of Quebec," stated Mr. Piche, "and this is due to the efforts made by the department to attain better results, because the conditions have been far from ameliorated with the dryness in certain regions."

Cafeteria Plan Gives Good Results

There appeared in the "Canada Lumberman" of May 1st, 1918, an illustrated description of the cafeteria plan, which had been adopted by the Kerr Lake Mining Co., Limited, of Cobalt, Ont., in regard to feeding men by this method. At that time the Food Control Board at Ottawa was thinking of instituting a system of rationing in the logging camps. Many lumbermen, who were eager to economize and conserve as much as possible both in the matter of food and labor, were thinking seriously of instituting the cafeteria system. However, before the new food regulations were promulgated the armistice was signed and the thought of the self-serve plan has, no doubt, faded from the minds of loggers.

H. A. Kee, manager of the Kerr Lake Mining Co., was asked recently how the cafeteria idea was working out and, in a reply, he states, "we have found this system perfectly satisfactory after a year and a half of experience with it and we would not care to alter it in any way. Even with the food regulations removed and more latitude in consequence allowed in consumption, the quantities per man have increased very slightly. The workers appear to be just as well pleased with our plan as they were eighteen months ago. If there is any particular point that any lumberman would like to be enlightened upon regarding the cafeteria service, we will endeavor to send as full particulars as possible."

MAKING THE PRINTED WORD EFFECTIVE

"If you have anything worth selling, it is worth advertising. If your business is not worth advertising, give it away and get into some other line of business," said the late Elbert Hubbard.

The message—the thing you have to say—is the main thing about a good advertisement. If it is strong, the rest is not so important. The mistake of trying to be original has ruined many an advertisement. The public is not interested in freak advertising.

People want the realities. They want to know why this merchandise was produced, in some cases how it was produced, and what are its good qualities and uses. And you can write a good advertisement if you are mightily interested in what you have to sell and then put a lot of that interest into your advertising copy. Feature the points that do or should appeal to the average customer.

Mr. Mackin Goes to Australia

James N. Mackin, Sydney, Australia

James N. Mackin "started succeeding" when he entered the saw business as a young man scarcely out of his "teens." His happy, genial disposition was a valuable asset, and he eventually became an expert salesman. For twenty years he represented a Philadelphia house, during which time he travelled extensively throughout the world.

He acquired experience of great value, and became familiar with business conditions everywhere. But one of the greatest facts that he learned, because it was so repeatedly impressed upon him wherever he journeyed, was the unusual high quality and great popularity of Atkins Silver Steel Saws.

During the war he represented E. C. Atkins & Co., in Washington, D.C., and made hosts of friends both for himself and for the great firm for which he sold. His success here, due to his wonderful business ability coupled with a wealth of energy, vigor, and optimism, made him the logical man to care for the rapidly increasing business of the firm in the Far East.

Atkins Silver Steel Saws and tools have enjoyed a steady growth in Australia amounting to over fifty per cent. in the last three years. The Company very wisely selected Mr. Mackin to represent them there, and he is now superintendent of the entire Australian division. His headquarters are located at the E. C. Atkins & Co., Branch House, No. 5 Australasia Chambers, Martin Place, Sydney, N.S.W., Australia.

Mr. Cox Was Tower in Timber Trade

"The Timber Trades Journal" says: The Canadian, as well as the Liverpool trade, have sustained a great loss by the death of Mr. Robert M. Cox, who was the pioneer in the Canadian pine trade as it is today. Mr. Cox, who was a native of Bewdley, Worcestershire, and the son of Mr. John Cox, a timber merchant of that town, went to Canada for the benefit of his health, when he soon saw the opportunities the export trade offered, and from that time developed the special line of business in which he afterwards became so prominent, being at one time the largest shipper of Canadian pine goods. In the interest of his business, Mr. Cox had crossed the Atlantic as many as 300 times, having in some years travelled to and fro twice or thrice, but latterly he spent the greater part of his time in Ottawa, and had not been on this side for three years. Besides having commercial interests in Ottawa, Mr. Cox was a Freemason, at one time a member of the Bottle Town Council, and a staunch supporter of the Timber Trade Benevolent Society, acting as one of its vice-presidents, and to which he sent a substantial donation each year.

The "Timber News" remarks: Mr. Robert Montgomery Cox had stood like a tower in the midst of the timber trade for a quarter of a century or more. He was the creator if we may use the word of the Canadian pine deal industry as we know it today. In former times the pine deal was like the rest of Canadian sawn stuff, ill manufactured and ill sorted, and Canadian pine came to this country largely in the log, and was then converted into planks and boards to suit English requirements. Mr. Cox was a man with a vision and he saw what was wanted and seized the opportunity, and in a few years rose to fame and fortune. Since then others have entered the field, and they, too, have been firms with ideas, and have expanded in ways unthought of the Canadian pine trade. The log has largely vanished, but in its place we have infinite varieties of planks, deals, battens, and sidings. The surviving partner of Robert Cox & Co., Liverpool, Mr. Fred Burns, has been associated with Mr. Cox for more than 40 years. He is at present in Canada, where he will remain until the end of the shipping season. Meanwhile the interests of the firm on this side are being looked after by the Liverpool manager, Mr. W. E. Bell, who is well known to the trade.

What Quebec Can do for Europe

The possibilities of Canadian natural resources in reconstructing devastated Europe are outlined by Lieut.-Col. P. Pelletier, agent for the Province of Quebec in London, in an article in a London daily paper. While referring to the Dominion as a whole, Lieut.-Col. Pe-

letier naturally puts in a strong plea for the province of Quebec, particularly in regard to lumber, pulp and minerals.

"We are," he says, "in a position to supply timber for houses, railways, mines and other purposes of national importance. Wood pulp is here manufactured on a huge scale, enabling us to supply the needs of paper manufacturers in Great Britain and elsewhere. Our water-power equals one-half of the total estimated water-power of the whole Dominion, and only a small proportion has been developed for industrial purposes. Here are opportunities, indeed, for the enterprising British capitalist to build up wood pulp, paper, and other industries based upon the utilization of forest products."

"Percy" Talks Some on Retailers' Trip

Dear Boss:—Acting on your suggestion, but making believe I took the initiative, I got on the special train, which carried the Ontario retail lumbermen to Penetang, and went up with them on their trip. A lot of oldtimers were aboard, and you could tell the sheep from the goats pretty well, from the way they hung together. For instance, the smoking compartment was reserved for the sheep, and believe me there were some bellwethers among the bunch.

Back where the plebeians (that's my nickname for them) were, there was a lot of smoke and games going on, but as I only had your expense money with me, I figured I had better not get into any games as I didn't want to lose, and have to charge it up to your account. I see now why some of the fellows on the road charge up more than \$20.00 a week expenses—Between you and me, they play Rummy and Pekoe, and if they lose, they put in in their expense accounts, but if they win they never give you any credit for it.

Everybody was busy smoking 2 for 5s, or talking, telling funny stories. A bunch of fellows who run retail yards up in the Bruce Peninsula, were all bemoaning the fact that they were having a hard time getting the farmers to pay their prices, as well as pay their bills. A few fellows asked me when the price of shingles was going to take a drop (just as if I was a prophet and knew what was going in the minds of those British Columbia shingle fellows). As per your instructions, I took my price-list and order book along with me, thinking I might pay expenses but nobody was buying lumber. When I mentioned prices to them you would think I had some contagious disease, from the way they edged away from me.

Well, everybody was happy. At last we pulled into Penetang, and when the porter came in looking for our grips, I gave him mine alright, but a lot of the other fellows hung onto theirs as if they had them filled with gold pieces, and were afraid they would get them mixed up. You know how when you get off a train, you throw your bag careless-like on the ground for the porter to come along and pick it up and bring it to the hotel? Well, from the way some of these birds handled their grips, you would think they were babies. They just put them down on the ground as carefully as they could—you'd imagine they had a lot of glass in them or bottles, and were afraid they might be broken.

We were all hustled up to the hotel in autos—some of the boys went over to Midland. I retired as soon as I could get to my room.

Next day they took us around the various mills, and showed us how to cut the culls out of the logs. Gee! those double-band saws can sure hum. Too bad they don't have a phonograph in all the saw-mills, and then they wouldn't lose any part of the log at all, because they could catch the hum of the saw on a record, and sell it like they do saw-dust, and all the other refuse. Some of the fellows were so great they didn't know what the nigger was, and were looking around the mill for a lot of colored fellows. I was wise, but I didn't put them next. Guess they never saw a sawmill before. I tell you boss, good lumber is going to be mighty scarce this year—one mill where they were cutting red pine, I only saw three pieces of clear and clear face come down in half an hour.

We then were motored over to Midland, and on the way stopped at the insane asylum. It was a real pretty place, but believe me they'll never get me there again.

By the way, I distributed to the boys that program of the day, with our stock-list on the reverse side. It made quite a hit, and I heard one fellow say, "You can't beat Bob, when it comes to getting some free advertising—pretty smooth work." That was a pretty good idea of yours to put our stock-list on the reverse side of the program of the day. I think we are going to sell a bit of that Midland stock on account of it.

They took us up to Honey Harbor for supper, my what a feed, and service. It was well worth the price. There is a lot more to tell you about this trip, but it is getting pretty late, and I have to get up early to catch the first train for Drumbo. I figure there is an order for about 10 cars of pine to be had in that town. I will write you further from the hotel there.

Yours truly,
"Percy McIntyre."

Owlburgh, Aug. 11th, 1919.

An Attractive Logging Camp is Appreciated

The Last Word in Construction is the Equipment of Progressive Western Firm at Myrtle Point—Men Paid on Piece Basis and Output Increased

WHAT is undoubtedly one of the most up-to-date logging camps in British Columbia, or in Canada for that matter, has just been given its finishing touches and is now in full operation at Myrtle Point. In reality there are four camps, but they are so connected that they are called one. The bulk of the timber for these camps, which are owned by Messrs. Bloedel, Stewart and Welch, whose headquarters are at Vancouver with Mr. Frank Riley as manager, was bought in 1911, and the hauling of logs on one side was started on New Year, 1912. During that year the firm increased their operations two sides and ran along with that capacity until last January, when they purchased the holdings of the Straits Lumber Company at Lang Bay, adding to their timber holdings about eleven miles of railway with equipment.

Since that time a new terminal has been constructed, that at Lang Bay being eliminated, so that the pivotal point is at Myrtle Point. The firm now have over twenty miles of steel. About nine miles of this is a main line and five or six miles of branch lines, and at the present time they are operating on four sides. At Myrtle Point they enlarged their building ground and, in addition to that, constructed a breakwater to protect the booming ground from the southeast winds. New buildings have sprung up as if by magic, one of these being a combination warehouse and store, machine shop and so forth.

Steel Bunks for the Men

The camp itself where the men live and eat is the last work in camp construction. Each car is divided into two and each compartment contains eight double-decker steel bunks, which were supplied by the Alaska Bedding Company of Vancouver. The latest sanitary conveniences have been installed, embracing bath-rooms, while there is a billiard room run on the most approved lines.

While all the camps are called one, there are in reality four, and they are numbered 1, 2, 3 and 4, with headquarters at Myrtle Point. In what is designated Camp 1, there are 35 men. Camp 2 consists of

modern cars, each 15 x 60 feet, on wheels. Camp 3, at Haslam Lake, the present terminal of the main line, is stationary. Camp 4 is at the head of the lake. Each of these camps is an example of what a logging camp ought to be for the accommodation of men who spend their lives in the open and who have not the daily amusements to which the people of a city are accustomed. So far as it is possible

This loader was specially constructed for the camp

to do so, the arrangements are such that ample provision is made for the comfort and amusement of the employees.

Labor Troubles are Unknown

In regard to the equipment, Bloedel, Stewart and Welch use the most modern high-lead units with duplex loaders mounted on steel cars. The railway stock consists of one 180-ton Baldwin locomotive, one 42-ton Shay engine and a 45-ton Climax, with 50 air-equipped skeleton flats. The accompanying illustrations show the high-lead system at work and the type of loader that is in use, this loader being the product of the camp. It is named after the popular manager, Mr. Riley.

The firm have enough timber to carry on operations for the next ten years. There is approximately 500,000,000 feet of it, consisting principally of fir and cedar. Of course this period depends on the state of the lumber market. All told there are 250 men at work, and it is interesting to hear the statement from Mr. Riley that the labor troubles in Vancouver did not effect Myrtle Point one iota. The camp is operated on what is known, so far as wages are concerned, as a piece basis. Under this system the men are paid in proportion to their earnings, based on a reasonable maximum output at the present wages. By this means, the men have largely increased their earnings and the output has been increased accordingly.

Lighting of the Camp

The camp is electrically lighted throughout. Current for this purpose is furnished by an installation of the Delco Light system, consisting of two automatic generating units, three-quarter kilowatt each, connected with a set of 160 ampere-hour storage batteries. The advantage of the two-unit system is, that most of the time a full load is not necessary, in which event one unit only need be operated, thus cutting the fuel cost very considerably. Another advantage is that, in the event of any mishap to one of the units, a plentiful supply of light is assured until repairs can be made, although this latter contingency is not so important as general experience with this particular system demonstrates that there is practically no danger of breakdown where ordinary care is given to the plant.

In passing, it may be noted that a serious objection to these isolated lighting plants might lie in the necessity for expert attention due to the liability of a breakdown. The experience of users, so far as can be ascertained, does away with the former of these objections, as usually the timekeeper, blacksmith or someone else, whose duties keep him around the camp, is capable of looking after the plant with perfect success. As to the latter objection, the local representatives of the Delco system state that, during last winter, with over thirty plants in operation in logging camps and similar places, only eight calls on them were made for service, three of these being from the same place, where gross carelessness was the cause.

View of the High-Lead unit that is in operation at the camp at Myrtle Point. This spar tree is about 190 feet high

Second Hand Machinery & Equipment Wanted & For Sale

ATTRACTIVE TIMBER PROPOSITION

has been placed in my hands for immediate sale; an exceptional opportunity to secure excellent timber lands at a moderate price. Call at office for particulars. W. Cooke, 203 Stair Building, Toronto. 17

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
134 South LaSalle Street,
Chicago, Ill.
5-t.f.

Saw Mill Property FOR SALE

Picnic Island sawmill plant at Little Current, Georgian Bay, 37 acres, for sale or lease for a term of years, or might put it in a good sized company, part cash, part stock; cutting capacity 140 M. a day, two thousand feet stone-filled lumber docks, 16 ft. water, Algoma railway station less than a mile distant, log booming capacity 10 million, telegraph and telephone, school taxes only, title from Crown, no debts or disputes; one of the best mills on the Bay, selling cheap to wind up an estate. For further particulars as to the mill and about twenty other buildings, etc., apply to Thomas Conlon, 44 Church Street, St. Catharines, Ont. 13-16

Virgin Timber For Sale

I have for sale, on very easy terms, in Virginia, 3,000 acres of Virgin Timber, mostly Shortleaf Pine, with some Oak. It is estimated to cut about 17 million feet of pine and oak, with a percentage of white wood, cherry and ash. Railway runs through the centre of it. The land will be worth \$50.00 an acre after it is cleared. Apply

DON. M. CAMPBELL,
15-18 Preston, Ont.

1300 Acres of Standing Timber FOR SALE

It consists of Birch, Basswood, Ash, Maple, Pine, Spruce, Cedar, Hemlock. Camps, logging equipment and sawmill on the ground; owner not a lumberman, engaged in other business. The said lands are located right on C. P. R. and C. N. R. sidings, six miles west of North Bay, better known as the Indian Reserve. Apply to

P. ADAMS,
15-18 North Bay, Ont.

Lumber Yard

Excellent place in Montreal, for sale or to let. Room 8, LaPresse Building, Main 6855. 16-19

The Forest Revenue of Ontario

During the year ending October 31, 1918, the Ontario Government derived a forest revenue of \$1,756,085 from its crown lands. Of this nearly half was derived from timber dues and approximately \$190,000 from the fire tax and one per cent. per acre per year for lands under license. The total revenue for the year is the largest since 1912-13 when the revenues closed approximately two million dollars. The area under license at the close of the fiscal year is reported at 16,888 square miles, or 574 square miles greater than on the previous year. These figures indicate the vital importance of Ontario's forest resources in furnishing revenue for the support of the provincial administration, as well as in furnishing supplies and raw materials for the hundreds of wood using industries of the province.

Used Machinery For Sale

5—Racine Power Hack Saws.
1—22" x 40" x 10' London Gap Lathe

Review of Current Trade Conditions

Ontario and the East

Building activity continues in all the cities and the number of permits show a decided gain. All woodworking establishments are busy and furniture manufacturers have not been as rushed for many months as they are at this particular juncture. The whole situation is steadying down just now and price advances have not been so marked as during the past few weeks. It is felt that on some lines the upward tendency has for the present been checked, but it is believed that lumber will go still higher next year when producing costs are taken into consideration. Lath of all kinds is still scarce and high in price and there is quite an active demand for spruce lath. Crating lumber is rather quiet at present but other stocks are moving freely.

There is not much change in the export situation. While there is some improvement in facilities rates are exceptionally high and there is not a great deal of shipment on private account. However, with the assurance of the British Ministry of Shipping which has been given the Canadian Pulp and Paper Association, and with other agencies at work, it is hoped that ocean tonnage will improve in the not far-distant future.

In hardwoods the prices are still climbing and buyers are bidding one against the other. As long as the present brisk demand keeps up quotations are likely to go higher. American buyers are taking considerable quantities of Canadian hardwoods but the situation in Ontario is not nearly as acute as across the line. Green stock is being purchased rapidly as there is very little dry material available. Automobile manufacturers are taking all the wood that they can command. While stocks cannot be said to be exhausted, yet they are low in comparison to the call that is being made for them.

It is interesting to note that the rates on lumber in carload lots have been reduced from Vancouver to Toronto by 2c per hundred. The former figure was 79c and this has now decreased to 77c.

Hemlock is very scarce at the present time and in good demand. Requisitions for white pine are increasing all the time and shipments across the border are steady while the market is firm. As the time proceeds for the opening of camps there is every indication that the supply of men will be ample in certain communities but the cost of supplies will be high—in fact, many firms are estimating that it is costing 10 to 15 per cent. more to get out the timber this year than any previous season.

Recent returns show that the export of lumber from B. C. coast mills to the United States during July were: Logs 8,012,970 ft. B. M.; lumber, rough and dressed, 23,882,955 ft. B. M.; shingles, 163,925, M.; siding, 2,060,152 ft. B. M.; flooring, 354,052 ft. B. M.; lath, 1,360 M.; moulding, 428,221 lin. ft.

It is understood that an advance in B. C. timbers is looked for in the near future. The brisk demand for Coast products across the border continues actively. There has been a recent advance in logs and all the Coast mills are rushed. In the East there is a great scarcity of flat grain fir flooring and the heavy call cannot be met by the mills. Edge grain flooring is also scarce while shingles are still ascending in price as buyers find out every time that they make inquiries regarding the figure.

United States

There has been no material change in general conditions throughout the country during the past two weeks. A congestion of cars at several points has existed owing to the strike of the railway shop men but these have now returned to work and for the time being, at any rate, freight is moving more freely. The spirit of unrest is, however, in the air and where the next outbreak will occur only time will reveal.

There has been during the past few weeks a decrease in the demand from retail buyers in all sections of the producing markets. This has been caused by the movement of the harvest. While prices are on the upward grade there have been no sharp advances during the past few days. Better weather conditions have been prevailing in the south and labor has become more plentiful. These factors have helped to augment production.

The number of orders for hardwoods continues large and while the requisitions are not so numerous or insistent as they were, it is announced that the supply of dry lumber is not equal to the demand by a considerable extent. There is a shortage of cars in several sections.

The furniture factories are making up for the slack trade of war

times and have more business on hand than they can readily handle. They are buying large amounts of birch and oak even though the prices for the latter wood have reached unprecedented heights. The advance in southern oak prices has been partially checked because the mills have resumed operations, but the supply is still inadequate.

An interesting factor in connection with the lumber industry is the request on the part of the Railroad Administration for the Department of Justice to investigate charges of profiteering. Advancing prices for lumber have led some people to the conclusion that the lumber manufacturers are making unwarranted profits. It may be true that some of them are making more than the average of the years before the war, but it must be remembered that during the war the majority of the manufacturers got very low prices for what they sold and did not sell enough to make it an object to continue in business, only that they had their investments and the skeletons of their organizations which had to be preserved.

Buying of hemlock has slackened up somewhat just as the buying of many other woods has slackened. However, while part of the slackening is due to lessening in demand, it is more largely accounted for because of the scarcity of hemlock stocks and the inability of manufacturers to supply lumber to satisfy the requirements of the most eager purchasers. Orders booked continue to exceed production. For examples, for the week ended Aug. 9, orders exceeded production by 25 per cent. in northern territory. Shipments and production almost balanced, the former being 3 per cent. less than the latter. Prices remain strong with an upward tendency.

The white pine manufacturers, both in the North and in the West, are able to secure all the business that can be taken care of and furthermore do not have to expend any great effort to secure this business. A number of the prominent manufacturers continue their policy of price stabilization and the result is that white pine price changes have not been so frequent as those of other woods.

Great Britain

Conditions are moving along steadily and in some centres with encouraging results. The labor troubles, however, and the general political unrest do not tend to stabilize matters or to send forward, with any amazing spirit, the various building enterprises. At this period of the year when importing should be at its zenith there is no special activity in this line. It is announced that the government pine imports are being distributed slowly among importers but many are waiting patiently for allocations to fill orders. There has been an active requisition for plywood recently and every likelihood exists of the market becoming stronger as time goes on. The cost of production today is very heavy, which fact will have a bearing on the prices in the future.

It is understood that freight has been secured for shipments of pine deals and sidings, wintered stock, apart from Government wood, and these goods are expected some time in August or early in September. Quebec birch boards have been offered at about £45 c.i.f. for merchantable quality, and several shipments are close to hand or loading. Birch logs are in demand, and offers have been requested for a stock for shipment, but the probable date of arrival is uncertain.

The position of the Scandinavian and Finnish trade has not improved. There is a good demand for deal sizes, and some recent c.i.f. shipments have no doubt resulted well for the importers. But generally, until the freight controversy has been cleared up trading will be unsatisfactory. The importers who pledged themselves to hold off until shipowners saw the error of their ways are not well satisfied with their position.

To estimate the situation of the hardwood market, present and prospective, is not an easy matter today. One set of considerations appears to lead to one conclusion, another set to quite a different conclusion. If demand regulated supply by decreasing values when it diminished in force we might now look forward to easier prices, for the demand has certainly fallen off lately owing to various circumstances, chief of which is the strike or lock-out in the furniture trade.

An impartial inquirer, in endeavoring to form an opinion of market prospects from the views of experts, would naturally ask himself the question whether agents, importers, exporters, or consumers are the best judges, says the Timber Trades Journal in speaking on the question of prices decreasing. The point is particularly interesting just now, as diametrically opposite views are expressed on this most

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

important subject. Agents seem fairly convinced that values will rise. Importers, on the whole, are also inclined to take this view, although it must be admitted they do not back up their conviction by their actions. Consumers, on the other hand, maintain that values must drop or trade cannot expand. Allowing for the bias of interest, let us examine very briefly the reasons given on both sides. Agents look at the question mainly from the shipping standpoint; they see no prospect of anything like the normal quantities of wood arriving this year, and they maintain, therefore, that stocks must be very low during next winter. Further, as there is apparently no prospect of labor and of costs generally being reduced, it is not reasonable to anticipate an exception in the case of timber. Importers were never

before at this time of the year so free from future commitments; they have mostly sold their purchases on c.i.f. terms, and when they have not done so they have found little difficulty in placing the wood with inland yard-keepers who are still holding very light stocks. The consumers' standpoint is different. House-building, repairs, railway and road work, cases and crates for export, etc., are greatly needed. Ever since the armistice greater trade expansion has been the crying need of the country, and the consumers assert that high prices have been the main cause of the very curtailment in trade. It is, therefore, they state, essential for prices to drop; and if values do not come down, they believe that the Government will take the necessary measures to enforce a reduction.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Conditions Remain Satisfactory in Montreal Circles

The Montreal lumber position has not materially changed. The demand for American account continues to be very good—it is the one strong feature of the general market. For a short period the railway situation interrupted business and restricted a slackening of orders, while an embargo caused shipments to be held up. This, however, was speedily rectified, and orders again came in freely. Reports from representatives of Canadian firms are favorable to a continuation of good business from the States. It is freely predicted that prices will go still higher.

Local trade is moderate. Building is now going on at an accelerated pace, and the demand for lumber is likely to continue steady until the end of the season. The industrial housing scheme will probably be delayed owing to a disagreement as to a tax on the loan for meeting the expenses of the Provincial Technical Commission. Local lumber dealers are only buying in a hand to mouth fashion, and the yards are poorly stocked. Firms will certainly have to pay more for the goods in the near future.

B. C. stocks continue to be very firm. Clears are difficult to secure. The very strong rise in Western products has tended to check business. An inquiry for B. C. ties for foreign account elicited practically no answer.

Exports to the United Kingdom are on a large scale, practically all for the British Government. So far as this port is concerned, the greater part of the lumber has been shipped; the goods will, however, be sent during the winter months from the lower ports. The reports that spruce prices in the United Kingdom have dropped has precluded any lumber to speak of being sent on commercial account. There is a belief that, with the government stock absorbed, the outlook for next season is very bright. The United Kingdom will continue to require immense quantities of lumber, as extensive housing schemes are being put in hand.

The pulp market has improved. The demand from Europe is excellent, and the Riordon Company has lately exported to six foreign countries. Some inquiries for pulp cannot be filled. The shipping situation is better, the Canadian government having responded to some extent to the requests of the pulp and paper companies that space be placed at their disposal.

Business Continues Firm in Ottawa Market

A strong steady demand, coupled with firm prices, was the best feature of the Ottawa lumber market during the closing period of August. The market as compared with the first part of the month did not show any marked change nor could it be fairly said that business on the whole increased. Instead it stayed steady, and the lumber trade generally expressed satisfaction with it.

August in other years has generally been looked on as one of the lean months when members of the trade were away on their vacation or otherwise letting things slide along, and evading the hot weather. This year it was different. Firms went out after business. If there was not any on the surface they dug it up, and with the demand from the United States keeping up the best since the pre-war years resulted.

Generally while trade was good and, in fact, the best for this time of year there has been since 1914 it was not up to the pre-war year demand. Export to South America showed an increase. The American demand remained as it was during the latter part of July and early August. The domestic turn-over also held firm if it did not actually show improvement all along the line.

Export business to European countries did not show any change. Considerable shipments continued to go across the ocean, but over

ninety-five per cent of the amount shipped was on government account. It is not generally expected that any great amount of private shipments will go to European countries this fall or winter.

Wholesalers reported a good demand for nearly all grades of pine and also some spruce. The principal shipments went to the United States. Some reports indicate that the stocks in the American yards are low and that there should be a continued good demand into the fall months. The stock going to the United States was mostly of the thinner grades, inch and inch and a quarter.

With the manufacturers the labor situation remained about the same, with a growing tendency toward a slight scarcity of woods labor. As new and larger camps are being operated this season there is a greater demand for woods help than last season. All of the camps were not filled by the third week of August, at which time shipments of men into the bush were being made.

With the woodworking factories there was little change in the domestic demand but the demand for export in some plants picked up. James Davidson's Sons, for instance, secured an order for fifteen carloads of doors. Twelve of the carloads were for Great Britain and three for South Africa. This plant has also secured the contract for the doors to be used by the Toronto Housing Commission. Doors for export advanced 15 per cent. in price and for domestic consumption 10 per cent. This firm has already established two woods camps with seventy-five men each.

Shingles and lath continued to hold firm in price with a fair demand prevailing. There was no surplus stocks on hand. Some increase in business was reported for stocks for building purposes and repairs. Building operations at Ottawa continued to proceed satisfactorily. With rents of commercial buildings and offices going up with those of the apartment houses, many real estate dealers predict that building will have to take a big jump next year to keep up with the growing demand for more floor space in the business sections. The activities of the Ottawa Housing Commission will also have a stronger tendency to stimulate structural activity and bring about a greater consumption of lumber of the building grades.

Prices Firm and Stocks Scarce in St John

The mills at St. John still continue to saw to full capacity. Should not all the logs reach the boom limits during the next two weeks there must be quite a shortage of logs and some mills will be forced to close down in the early fall. Trade locally still continues good and the factories and yards are very busy, all the factories having from three to four months work ahead of them, with no relief in the labor situation as far as bench hands are concerned. Prices remain very firm and stocks are scarce. This applies to material at home as well as western goods, very little of which is coming into the markets.

The American market still remains very firm and has no signs of weakening at the present moment, the base price still being \$55 per M. Random 2 x 3, 2 x 4, 3 x 4 size is bringing \$40.00 on cars St. John; 2 x 6, 2 x 7, \$39.00 to \$40.00; 2 x 8, \$45.00, and 2 x 10-12 about \$50.00. Laths are very firm and practically nothing to offer. The price at present is \$4.50 per M., f.o.b. mills here.

Pine lumber is also very scarce and good qualities are hard to find; prices remain stiff. The West India market is now beginning to call for stocks of the usual shipper quality but will be forced to await the new cut before any shipments can be made. The larger boards are bringing from \$50.00 to \$52.00 and the smaller boards \$40.00 to \$45.00 per M., f.o.b. St. John.

Shingles are very scarce with prices of extras \$6.00; clears \$5.50; 2nd clears \$5.00; Ex. No. 1 \$3.50 and if a buyer is badly in need he will offer more money.

Food & Provisions

For The Lumber Camp

We make a specialty of Lumbermen's Supplies, also all kinds of Farm Produce in Car Lots, such as Hay, Oats, Beans, Peas, Potatoes, etc.

Write for quotations and save half of your present freight rates.

Prompt shipment is assured from our generous stocks. Our facilities for shipping are excellent.

Musings on Matters of Passing Interest

Much has been written about the "cussedness" of human nature. In this world things often go by contraries. Just at the particular moment that the inventor wants to display the merit of his particular machine or the proud mother reveal to admiring friends the cleverness of her child—well, there is a balk on the part of both the machine and juvenile. How often do things happen at the wrong time? The auspicious moment never seems to arrive just when it is of the most importance that it should. An old song used to run "It is seldom if ever you get them together, the time, the place and the girl." It would seem, by an extraordinary combination of circumstances, that an experiment tried recently by a leading industrial concern, in the shape of a "no-accident week," went entirely askew. All calculations were badly upset. Although notices had been posted by the local Safety Committee requesting that employees co-operate in eliminating all mishaps in both the yard and mill, and the help entered enthusiastically into the spirit and purpose of the move, the results were anything but gratifying. During that particular week more mishaps transpired than during any other week of the year, and yet it was to have been a "no-accident week." Fortunately none of the injuries were severe, but they occurred, nevertheless. The interpretation of the idea by the men, insofar as could be learned from an outsider, was that not one of them should miss having an accident during that week. However, there is nothing like trying, and while the first attempt may not have been satisfactory in its outcome, it was certainly ideal in thought and conception. It is only by a series of successive, even if unfruitful, endeavors that a desired goal is reached or perfection achieved.

* * *

Lightning and forest fires are again reaping their usual harvest in Canada, and the month of July has come in for its fair share of destruction. Northern Ontario and the mountainous districts of British Columbia have suffered the most from forest fires, while in Alberta and Saskatchewan prairie fires have done a great deal of damage to the fertile land. Farmers in all parts of Canada have suffered from lightning, many barns, with their valuable contents, having been totally destroyed. Although no estimate has yet been made, the loss from these sources will be very heavy. The Monetary Times' estimate of Canada's fire losses during July, 1919, is \$1,118,377, as compared with \$3,337,530 in June, and \$3,369,684 in July a year ago.

* * *

To prepare the cheaper kinds of woods by a patented method that makes them more durable is the purpose of the organization of the Scandinavian Pencil Wood Company, just organized in Koge, Denmark, according to the Commercial Attache in Copenhagen. The woods especially to be prepared are birch, ash and elm, all wood treated by this process being called teakin wood. Certain changes in the character of the wood that normally take place only after many years of drying are by this chemical process produced within twenty-four hours. Thereafter, when the moisture that may still be left has evaporated, the wood becomes harder and more durable than by the ageing process. Teakin birch is of a beautiful golden brown color and when polished with potash it takes on a mahogany red hue. Teakin ash is a substitute for teak. Teakin elm has none of the disadvantages of natural elm. Teakin fir is of a uniform color all through and is used for office fitting and furniture and for veneering.

* * *

One of the outward signs that reconstruction is going on rapidly and that much new business is expected to develop is evidenced in the number of incorporated companies, both federal and provincial, which are being formed. The organizations which are taking out letters patent, were never quite as numerous, covering all fields of activity and including lumber concerns, mining concerns, pulp and paper concerns, iron working and steel concerns, oil concerns, fuel concerns, supply houses, jobbing houses, etc.

So long as any organization has the necessary money to meet the small preliminary outlay it can become incorporated if five provisional directors consent to allow their names to be used. The Canada Gazette and the Gazettes of the various provinces come out with names and capital stock ranging in some instances up in the millions. Wide powers are conferred on each corporate body and provisional directors are named—often lawyers, lawyers' clerks or stenographers.

It has been stated that these names are used for purposes of convenience and until such times as a new concern is ready to go ahead and reveal the identity of its officers and directors. Gazettes publish the style and title of the companies, the trade papers state that charters have been granted to So and So, with an authorized capital stock of so many thousand dollars, and headquarters in such and such a place. The result is that wide publicity is obtained for the Wear-Well Clothing Co., Limited, of Toronto; the Provincial Phonograph Co., Limited, of London; the Sterling Lumber Co., Limited, of Hamilton; the New Thought Publishing Co., Limited, of Ottawa, or the Commonwealth Auto Truck Co., of Montreal. Now, concerns bearing such artistic appellations as these have a capital stock ranging, possibly, from \$40,000 to \$1,000,000, and yet their provisional directors are furnished in the Gazette as lawyers and lawyer's clerks.

If a newspaper man makes application to know who is really at the back or financially interested in the newly chartered bodies he is generally met with a smile and politely told the time is not just "ripe" yet to give such information and that the personnel of the company is really a "private matter" and comes under the confidential relations of counsel and client. Then if application for information is made to the Provincial Secretary in each of the provinces the reply is forthcoming, that "we really cannot give you the personnel or street address and number of such and such a company; all we know is that their head office is in Ottawa, Montreal, Quebec, Hamilton or London."

Now, what is the result? Many supply houses, commercial agencies, travellers, jobbers and others would like to get in touch with the new concern and send in a letter, say, to the "Provincial Phonograph Co., Limited, London," or the "Sterling Lumber Co., Limited, of Hamilton." It is well known that such institutions have been created, but the postmaster of each city returns all letters of inquiry in a few days, requesting that the street address and number of the company be given, as such organization cannot be located. The trade papers are appealed to in vain and also the provincial treasurer.

The "Provincial Phonograph Co." and the "Sterling Lumber Company" exist according to letters patent, but are not really get-at-able. Surely when a concern is ready to take out a charter it should be prepared to do business, or at least open an office. If some stringent regulations were passed making all organizations, as soon as incorporated, have definite headquarters and an identity, there would possibly be less flotation of companies, good, bad and indifferent, about which nothing is ever heard of after the publication of their notice of incorporation in the press. The sooner the postal law or the joint stock company legislation of Canada and of the various provinces is amended to compel new concerns to have a fixed location, a place that can be discovered by the public or those anxious to get in touch with them to do a legitimate business the better it will be all round.

* * *

A New Orleans news item says: A very much out-of-the-ordinary lumber movement created interest here the other day, when a car-load of birch, designed for export, arrived here as an express shipment from the mills of the B. Heinman Lumber Co., Wausau, Wis. The express charges on the shipment amounted, it is said, to \$1,800.

Ontario

Sandy Jarrick, Hydro Glen, intends erecting a sawmill at Ragged Rapids on the Severn River.

The Beaver Board Co. intend erecting a large addition to their plant at Thorold, Ont., in the near future.

Harry Alexander, Limited, Toronto, Ont., has been incorporated to carry on the business of woodworkers. Capital, \$40,000.

A lumber warehouse at Hurdman's Bridge, near Ottawa, belonging to the McAuliffe-Davis Lumber Co., was recently visited by fire.

The sawmill at Gillies Bay, Ont., owned by Walter Wardrop, of Dyers Bay, Ont., was recently destroyed by fire. The mill will be rebuilt.

The Angle Canadian Construction Co., Limited, have been granted permission to change their name to the Anglo-Canadian Tie & Timber Co., Limited.

There is a great building campaign going on in the Oak Ridges district, near Toronto. Over 50 new houses and stores have already gone up this season.

Eureka Pattern Mfg. Co., Limited, Toronto, has been incorporated to do business as pattern-makers and to carry on woodworking in all its branches. Capital, \$40,000.

A charter has been granted to Joseph Dolan & Sons, Limited, Ottawa, with a capital stock of \$50,000. The company is empowered to buy, sell and deal in goods of all kinds, including the pulpwood, lumber, logging and timber business.

The Fibre Packing Co. of Canada, Limited, Walkerville, Ont., have been granted letters patent constituting them a private company for the purpose of manufacturing and dealing in fibres, fibre-board, fibre containers and other similar products. Capital, \$100,000.

I. H. Weldon, president of the Provincial Paper Mills Co., Limited, Toronto, recently spent a few days in Port Arthur on business. He states that if circumstances warrant it his company will erect a paper mill at Port Arthur early next spring.

The Seaman, Eaton Flooring Co., Limited, Toronto, Ont., have been incorporated to manufacture and deal in lumber, lumber products and builders' supplies. Capital, \$40,000. The provisional directors are W. B. Seaman, M. H. Eaton, J. Seaman, A. Seaman and S. J. Arnott.

It is thought probable that Oakville Town Council will look with favor upon a proposition placed before it recently by a group of builders who plan to erect fifteen or more residences in the town, at a cost of from \$5,000 to \$8,000 each, and who are asking for exemption from taxes for one year.

The McDonald Lumber Co., who specialize in softwoods as well as in western stocks, have removed their offices from 195 Victoria St. to 34 Victoria St., Toronto, where they have larger and more commodious quarters. At the head of the company is Mr. N. L. McDonald, well known western lumberman, and associated with him is Mr. J. S. Knapman, formerly of Peterboro, who has spent many years in the timber business.

The Wattman-Kalbfleisch Car Body Company has begun in Stratford, and their plant is now in full operation. The company makes bodies for hearses, ambulances, sedans and service wagons. The new industry is an amalgamation of the Kalbfleisch Planing Mill, of Stratford, and the W. H. Wattman Car Body Co., of Toronto. One of the pieces of reconstruction recently undertaken by the firm was a body that was built in 1902, which was upset on the Hamilton highway and is now being remodelled on up-to-date lines.

The big paper plant at Espanola, owned by the Spanish River Pulp & Paper Mills, Limited, is being greatly extended. Construction started on a new addition on June 1st last, but this is now completed. A newsprint machine is being installed which will be in operation by Nov. 1st and will increase production by 50 tons a day. A second machine will be erected later on, and will be in operation early in the spring. The new units will enable the company to get the benefit of the favorable markets that are sure to prevail during the next few years in the United States.

Handley Page, Limited, with a capital stock of \$2,500,000 and headquarters in Morrisburg, Ont., have been granted a federal charter to purchase, manufacture, build, erect, charter, operate, etc., aeroplanes of all kinds, including monoplanes, bi-planes, hydroplanes, flying-boats, seaplanes, aircrafts or other machines to navigate the air and for use in commercial, civil, naval and military aerial service. Among the incorporators of the company are Wm. H. Workman and Mark Kerr of London, Eng., Harry Clark of Montreal, Fred R. Chalmers and Wm. H. McGannon of Morrisburg.

Eastern Canada

The Three Rivers Shipyard Co., Three Rivers, are erecting an extension to their office.

The "Canadian Seigneur" sailed from Montreal on Aug. 21 for Liverpool. She is the first Canadian Government vessel to carry pulp to the Old Country.

Parker Creek Lumber Co., Montreal, have been granted a provincial charter to manufacture and deal in lumber, lath, shingles, and to operate paper and pulp mills. Also to manufacture any article made in whole or part of wood. Capital, \$95,000.

The Smith Lumber Co., Limited, Woodstock, N. B., have completed their sawing of logs for the season, and have opened their coopeage plant. They recently received a carload of hoops from Indiana and will turn out 10,000 potato barrels.

The large stable of the St. Maurice Paper Co., Three Rivers, P.Q., containing twenty-four horses, fifty loads of hay and one carload of oats, was completely destroyed by fire recently. Nothing was saved. Loss about \$20,000, partly covered by insurance.

Rimouski Fishing & Cold Storage Co., Limited, Montreal, P.Q., was recently incorporated. Wide powers have been granted this company under their charter, among which are to operate factories of all kinds and to build and operate ships and vessels. Capital \$50,000.

The H. A. T. Lumber Co., Limited, Montreal, P.Q., have been incorporated to manufacture and deal in lumber and timber of all kinds and to erect and operate sawmills and factories and to manufacture any article made of wood. Capital, \$100,000. The incorporators are J. M. A. Valois, L. J. Boileau, and J. R. Renaud.

The Cane Mola Co. of Canada, Limited, Montreal, P.Q., were recently incorporated. Among the powers granted this company under the charter were to manufacture and deal in barrels, boxes and other forms of packages and to operate sawmills, planing mills, box factories, and to deal in wood products of all kinds. Capital \$100,000.

A federal charter has been granted to J. C. Nadeau, Limited, with headquarters in Montreal, and a capital stock of \$50,000. The company is empowered to acquire the property and assets of the business now carried on in Montreal by J. C. Nadeau as a lumber merchant, and to conduct a general lumber and timber trade in all its branches. The incorporators are Joseph C. Nadeau, Louis J. Nadeau, Jean B. Tariff and others, all of Montreal.

The output of the Fraser Company, Limited, pulp mills at Edmundston, has reached 90 tons daily. The capacity for which the plant was constructed was 100 tons, but they do now expect to exceed this as a result of improvements which are being made. The Fraser Company are now shipping the 65 million feet of lumber which the British Government recently purchased from them.

The first shovelful of earth was removed from the future site of the mammoth plant of the International Paper Co., at Three Rivers, which will cost in the neighborhood of four million dollars. The International Paper Company has merged into its new venture the St. Maurice Lumber Co., already carrying on operations at Three Rivers. The excavation work will be rushed, and it is expected the structure of the mills proper will be up by December next. The plant will turn out pulp and finished paper of all grades.

A. R. Gould, of Presque Isle, Me., who is well known in New Brunswick through his connection with the St. John Valley Railway enterprise, is the president of a new company which has taken over the Arpstock Pulp & Paper Company's plant on the St. John River at Keegan, north of Van Buren, Me. Owing to difficulties the mill has been closed for some weeks, and now it is learned that Mr. Gould and H. B. Stebbings, of Boston, have purchased the stock interest of E. P. Lindsay and others in the enterprise and the plant will soon be in full operation once more and eventually on a larger scale than ever. The plant was built in 1917 and is thoroughly equipped, having a daily capacity of about 60 tons.

Western Canada

The Empire Timber Products, Limited, have been incorporated with registered office in Vancouver, B.C. Capital \$100,000.

A big bush fire in the vicinity of the Vedder river, between Cultus Lake, B. C., and the river, recently destroyed a large amount of valuable timber.

A sawmill will shortly be in operation in the Burns Lake district, B. C. The man behind the enterprise is F. R. Keele, who is a Francois Lake rancher and has a big stand of fine timber.

After active service as major in the 10th Engineers (Forest) of the United States Army, Mr. Lafon, formerly assistant forester of British Columbia, has been appointed assistant chief forester under Chief Forester M. A. Grainger.

Among the recent incorporations are the following: Horne Lake Lumber Company, Ltd., \$25,000, Murrayville; Kitselas Lumber Company, Ltd., \$25,000, Vancouver; Glenwood Shingle, Tie and Lumber Company, Ltd., \$25,000, Murrayville; Kitseleas Lumber Company, Ltd., \$25,000, U.S.K.

The Beaver Cove Lumber and Pulp Co. will be in operation at Beaver Cove, B.C., in about six weeks. It is expected that the population of Beaver Cove will reach 10,000 before three years elapse. A number of returned men are working on the construction of the plant. The company will build a railway for hauling its timber.

B. R. Morton, superintendent of planting on the prairie forest reserves, with headquarters at Ottawa, is on the Coast to secure Sitka spruce and Douglas fir for reforestation in Scotland. The cones are sent to Kamloops, where a seed extracting plant is located. They are placed on trays and the room heated to 100 degrees. In from two to five hours the cones burst and the seeds drop to the floor. The cones of jack pine and lodgepole pine require up to twenty-four hours' heating.

Logs scaled by the provincial department in June amounted to 183,731,105 feet, compared with 171,640,268 feet in June, 1918. Log production for the first six months of the present year was 829,669,850 feet; for the corresponding period in 1918, 772,445,607 feet, an increase of 57,224,243 feet. The cut per species in June was: Douglas fir, 97,616,402 feet; red cedar, 39,391,614 feet; spruce, 15,943,754 feet; hemlock, 16,993,643 feet; balsam, 4,166,721 feet; yellow pine, 4,003,242 feet; white pine, 399,214 feet; jack pine, 160,426 feet; larch, 4,920,431 feet; cottonwood, 131,831 feet; maple, 2,165 feet; alder, 1,662 feet.

Eighty municipalities throughout Ontario have passed by-laws under the Housing Act, providing for appropriations ranging from \$20,000 to \$1,000,000, with Windsor providing the largest amount. Mr. J. A. Ellis, director of municipal affairs for the Ontario Government, gave this information, which shows that the Act is making headway throughout the province. Ottawa purchased land for \$60,000, which has been divided into 160 lots, which became available about a week ago. Of the 160 lots, only 10 or 15 are still available. The Capital has since bought the Reid property for the same figure.

"By-Pass" Blower Systems for green saw dust and wet stringy material

Material that usually clogs the ordinary Blower is handled easily and continuously by our "By-Pass" Blowers. No material passes through or around the fan. That is the big secret of "By-Pass" success. Slow speed and minimum power are other strong features. Write for literature and all details.

We manufacture and install complete systems

Toronto Blower Company

156 Duke St., Toronto

Make Your Roof Tight

The most vital part of your camp buildings should receive the most careful attention. A judicious selection of roofing materials coupled with good workmanship in their application, will ensure comfort in all kinds of weather.

Reed's Standard Rubber Roofing

possesses all the qualities that give satisfaction. Made of the best wool felt of full weight and saturated with a grade of Asphalt that defies the severest weather conditions. Made in 1-ply, 2-ply and 3-ply, weighing 35, 45 and 55 pounds respectively. Nails and cement with every roll.

We can also supply cheaper grades if required.

Tarred Ready Roofings and Tarred Felt

of all kinds as well as sheathings, both tarred and dried.

Reed's Plastic Asphalt Cement

The best material ever produced for coating or repairing roofs. A heavy plastic material which stops up all cracks, and will stick to anything. Easily applied. Used with great success for over 25 years. Put up in small cans or in drums and barrels.

Write for full particulars.

WELLAND

To Buyers of Camp Supplies

You will take into consideration, unusual market conditions when placing your order for Foodstuffs this fall. A strong movement is on foot to reduce the cost of such commodities, while on the other hand the Demand exceeds the Supply.

Will prices come down or go higher still? For these reasons the Foodstuff Market, a complex one, must be followed very closely. You have little time to do this, because food is only a part of your requirements.

SO WE OFFER

to keep you posted through our Special Monthly Letter and Price List. It is the Barometer of Prices. Our Special Organization, under the supervision of a Director of the Firm, will also be glad to quote specially on Requisitions, giving market information, or send samples. A simple request will bring these.

Fifty years of experience and good service is the Bond we furnish with each transaction. We claim your business on that alone.

We solicit an opportunity to quote.

DRIED FRUIT

Here's a line of goods which you have had difficulty in getting at a reasonable price or for that matter at any price in some cases

Take figs for instance, there has not been a decent cooking fig in the market since the war started. Now that trading has been allowed with Turkey again—we have secured a better lot of Smyrna Natural Figs. They are large and luscious—really they are fine quality, best of all they are at a very reasonable price compared with other fruits which are not nearly so good for camp purpose.

Fancy Smyrna Turkish Figs--Bags about 65 lbs--18c

SEND FOR SAMPLE--OR BETTER STILL--A SAMPLE ORDER

Raisins

This fruit is very, very scarce, and high, and will be for the coming season.

We have on hand some of last crop Muscatels slightly rain damaged, but in good dry condition. These we offer you

California 3 Crown Muscatels--25 lb Boxes--12³/₄c

Scene in the Haley Mill showing Goodyear Extra Power Belting in use.

Another Convert

HALEY & SONS
Lumber Merchants

Gentlemen:—

We want to tell you about the Goodyear Extra Power Rubber Belting we bought for our new mill two years ago and what great satisfaction this Belting has given us. As you are aware, we bought this kind of belting from you for the equipment of our mill **throughout**, even to planers and matchers. We were skeptical at the time about using this belting on our matchers, especially on the side heads, as that is a very trying place for any kind of a belt. We concluded we would try your rubber belting, as we thought then as a makeshift. Now it has been something over two years since we belted up our matchers with your belting and the original belts are yet on these machines and still giving good service. We thought where this belting of yours had proved so eminently satisfactory that we should tell you just as we thought about it and you know we are giving this testimonial of Goodyear Extra Power Rubber Belting entirely at our own initiative.

Yours truly,

HALEY & SON.

GOODYEAR
MADE IN CANADA

GOODYEAR EXTRA POWER BELTING

Almost Unbelievable Power-Saving and Economy

Time and again we have found purchasers of Goodyear Extra Power Belting openly skeptical that it would live up to our promises.

Time and again they have told us not only of lower belting costs, but also of increased and faster production, time and power saved.

Today there is no reason for any plant to buy belting on promises.

On file in our office are letters which enable you to buy belting by proof.

Records of Goodyear Belting performance.

Records of extreme long-life which means economy.

Records of pulley-gripping, non-slip qualities which save power.

Records of work under strenuous conditions of heat, cold, acids.

Records of strength and flexibility.

Records which prove that without Goodyear Extra Power Belting enough power is wasted in Canada every year by poor belts to pay a big dividend on Industry's capital.

Some of this power is being wasted in your plant. Better belting, scientifically applied, will save you money. Without obligation to you, a belting man, trained by Goodyear, will call and make a record of your needs and experiences. Our recommendation will come from engineers who fit belts to conditions. Phone, wire or write the nearest branch.

The Goodyear Tire & Rubber Co. of Canada, Limited.

Horses Thrive On CANE MOLA

The Ideal Feed for Live Stock

Sprinkle Cane Mola on old hay, straw screenings and mix with grain in feed box.

Dry untempting feeds are made palatable and digestible and are eaten up to the last atom when fed with Cane Mola.

Cane Mola is not a prepared Stock Food—just 100% Pure Sugar Cane Molasses. It contains just enough natural salts to keep your live stock in healthy condition.

Horses fed with Cane Mola are free from Colic, will winter at hard work and finish in excellent condition in the spring. This has been demonstrated in lumber camps in lower Quebec.

Write for information and booklet on economical feeding.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

DUPLIX FOUR
WHEEL
DRIVE
TRUCK

Savings That Hold Good Wherever the Duplex Hauls

To lumbermen who have never owned the Duplex 4-wheel Drive, the simple facts must seem almost incredible.

Yet they are facts. And they are conclusive. They are based on ton-mile costs—the very bedrock of all hauling.

It is in ton-mile costs that Duplex savings average from 20 per cent. to as high as 60 per cent.

The figures leave no room for doubt; no room for argument.

They are quoted from the records of firms which operate a single Duplex, and those which operate whole fleets.

Whether these reports come from cities or small towns; from mining or lumber regions; from road-building operations, or wherever, the net result is the same.

The Duplex does make a decided and definite saving in the cost per ton-mile.

The comparison holds good in every case. Because that is true, the Duplex has repeatedly replaced horses, mules, and other trucks, in all kinds of hauling.

The reason, of course, is obviously sane and simple.

The Duplex drives with all four wheels. It always goes through—even where a team of horses would stall. And it always carries the load.

The Duplex wastes no power in spinning wheels. It saves itself from the damage of unequal strains. It requires only single rear tires instead of dual—a clear saving here of 30 per cent.

Duplex dealers always welcome a comparative demonstration. They are accustomed to regard the sale as good as closed when they are asked to compete in performance.

Business executives who have any hauling proposition, on any kind of road, will find it to their interest to inquire thoroughly into the Duplex facts.

Send for Booklet, "The Modern and Efficient Way to Haul Logs and Lumber."

Simplicity and Economy in Rail Haulage

12-TON BELL PUSHING TWO LOADED CARS UP GRADE

An enquiry into the efficiency of Bell locomotives will convince you of their splendid adaptability to the requirements of the lumberman. They are most economical in the matter of fuel, and will operate on kerosene, fuel oil, distillate or crude oil. This eliminates fire danger from sparks. Being geared they are able to supply 50% greater tractive power than a direct connected type of equal weight. They are compact and easily operated by one man. Send for full particulars.

SYRACUSE BABBITTS

are in the
bearings
of this
big
gang

The bearings
in a lumber-gang
are subjected to such
great shock and vibra-
tions that would *pound out*
ordinary babbitt in no time.

Our babbitts have stood up for
years in the biggest gangs of the
big lumber-camps on this continent.

Let us help you determine what babbitt is
best adapted to the requirements of your
machinery.

Syracuse Smelting Works

BABBITTS, SULDERS, WHITE
BRONZE, PHOSPHOR COPPER,
PHOSPHOR-TIN, WASHERS,
GALVANIZING FLUX,
SHEET-LEAD,
RAW METALS.

MADE BY THE
DIAMOND IRON WORKS
OF MINNEAPOLIS MINNESOTA

QUESTION NO. 3

What is the differ-
ence between mixing
and alloying babbitts?

ANSWER

Technically none.
Practically there is
a difference. Melt-
ing the metals to-
gether in a pot and
stirring them by
hand with a ladle
is the ordinary
method of making
babbitt. That's
mixing. Babbitts
made by the Stanley
Process are alloyed,
involving 24 hours
of purging the raw
material and a pow-
erful agitation by
mechanical means.
Mixing cannot make
a homogeneous bab-
bitt. Stanley Pro-
cess alloying as-
sures homogeneity.

Syracuse Babbitts

are alloyed by the
Stanley Process;
Cost a little more,
but worth it.

A WADE does 10 mens work Saws 25 cords a day!

A money-maker and hard work saver for land clearers and wood-cutting contractors. One man can move it from cut to cut. Simple and reliable. Hundreds in use all over the U. S. When not in use for wood cutting, the 4 H. P. motor will run mills, feed mills, feed cutters, pumps, etc.

"My Wade Saw is cutting wood for less than 3 cents a cord."—F. J. Williams, Burns, Ore.

"I have sawed through five-foot solid oak logs at the rate of one foot a minute."—N. P. Myers, Laton, Calif.

Quick deliveries from over
100 points throughout
the United States.

America must burn more wood for fuel. One Wade will do 10 men's work at one-tenth the cost. Write for free Book, "How Dan Ross cuts 40 cords a day," full details and special price.

Coe Veneer Lathes

USED IN THE LEADING MILLS

For heaviest cutting and for making the finest figured veneers, this machine has the widest possible range, and is unquestionably the best Rotary Veneer Cutter on the market.

We build these machines in over sixty different specifications, which govern the diameter of swing, length of knife, weight, equipment and attachments required, according to the work to be done by the machine.

With this wide range we cannot fail to meet your wants exactly. Send for our catalogue.

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

1st—Pyrene is death to all inflammable fires.

2nd—Pyrene does not freeze at fifty degrees below zero.

3rd—Pyrene does not deteriorate.

4th—Pyrene is easily operated and ever ready.

5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.

6th—Pyrene has served with the boys at the front.

7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the 2½ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances, also for our book on how to protect your factory. This book contains valuable information.

The Machine That Pays Your Profits

is the one that turns out the most of the best work at the lowest cost per day, per month and per dollar invested. Such a machine is the H. & B.

No. 156 "Baby" Fast Feed Planer, Matcher and Moulder

—a medium-weight machine that has all the advantages of a big machine and is particularly adapted to the needs of the smaller mills, where short runs are frequent and many adjustments necessary.

Backed by nearly half a century's experience in building lumber-making machines that make good and recommended by practical mill-men as a profit-maker, quality-raiser and a reliable, steady-working machine that has enabled them to meet the keenest kind of competition.

If you're interested in bigger profits from your mill—in low first-cost and after-cost and the highest quality work at 35 to 70 feet per minute—you'll be interested in the No. 156.

Write today for full information regarding this machine.

Crown Brand AND Lily White Corn Syrups

A well fed camp means efficiency. Your supplies are one of the most important details in promoting satisfaction and contentment among your men.

Use "Crown Brand" and "Lily White" Corn Syrup instead of sugar or molasses for cooking and on the table.

Make sure you include these popular brands when ordering your fall and winter supplies.

Put up in 2, 5, 10
and 20 lb. tins

How Dominion Rubber System Belting Service Helps Belt Users

For more than fifty years we have specialized in the making of belting and the solving of problems in transmitting power and conveying materials economically.

We maintain a staff of belting experts for the sole purpose of helping Canadian Manufacturers to "speed up" production by cutting belting costs and eliminating power wastage.

These experts will, without charge, analyze your transmission and conveying equipment in its entirety and will recommend changes only where they are necessary to increase the efficiency of that equipment.

You are under no obligation to us in availing yourself of this service—the only return that we request is that you purchase Dominion Rubber System Belting when you have been convinced that the changes recommended by our engineer will be beneficial. This special service is available through any of our branches.

Phone, wire or write the one nearest to you and let us prove to you that the kind of service we have given to Canada's largest industries and the kind we want to give to you, means more than just selling better belts.

Makers of

Dominion Hose, Packing and Industrial Rubber Goods and Dominion Tires, the GOOD Tires for every purpose.

Maple Leaf SAWS

Maple Leaf Circular Saws are made of Special High Grade Steel, accurately ground; have hard-tempered center which makes a stiff blade that will stand up under the most severe conditions, and is less liable to push over in case of accident.

Let us prove it to you if you have not discovered it already.

EVERY SAW GUARANTEED.

ner Box
Machines,

Box Board
Matchers,

Box Board
Printers.

No. 12-30" Open Back Cleater, Framer and Bottomer
Motor Direct Connected.

Every manufacturer of boxes; every manufacturer who has nails to drive in any article, or packages of any kind to manufacture, should write the Morgan Machine Company for latest developments in machinery for the Box Industry.

Morgan Machine Company
ROCHESTER, N. Y.

Pendry Balanced Throttle Valve

for operation of locomotive cranes, log loaders, skidders, and all hoisting engines.

Gives operator perfect control of his engine, so essential in loading logs and heavy timbers.

Just the
Thing for
Logging Operators

The Pendry Balanced Throttle Valve is essentially a quick opening valve, perfectly balanced, but it can be opened as slowly and gradually as a screw stem valve and will remain open at any point to which it is set.

Furnished with brass body in sizes from ¼ inch to 2½ inch and with iron body in sizes from 2 to 5 inches, inclusive.

Prices on Application

Formerly manufactured by the Detroit Lubricator Company, Detroit, Michigan

Now manufactured by the

Bay City Foundry & Machine Co.
26th and Water Sts. BAY CITY MICH.

LIDGERWOOD SKIDDERS

The Most Modern Machines
for
Skidding Logs of All Sizes

We build skidders for every condition and will send expert logging men to look over your timber lands and advise you what type is best suited to your work.

Lidgerwood Machines were the pioneers in steam logging and have been constantly improved to meet the advancing requirements of lumbermen.

Lidgerwood Skidders are the only skidders provided with interlocking drums and with a mechanical slack puller.

Portable High Spar Overhead Skidder

Portable Ground Skidder

A statement of what logging is costing at any particular operation, without taking into consideration the local conditions, and without considering every element of cost from the felling of the tree to delivery at mill, is worthless.

In deciding the cost of skidding by any type of machine not only should the cost of operating the machine be considered, but also the amount of timber that will be skidded

at each setting, the railroad construction necessary, and time lost in repairs.

We have paid special attention to the construction of Cableway Skidders required by conditions in British Columbia and the most successful machines now in use in that province were installed by us.

Does Labor Saving Machinery Pay ?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving

effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

You will readily see that it would not take long to pay for the cost of the machinery from the savings effected in the cheaper handling of the logs.

Our Booklet "Suggestions for the Lumberman," tells a number of up-to-date methods of using this labor-saving machinery for moving logs. You may have a copy for the asking if you have not one already. Just drop us a card.

Bain Sleighs for Logging Operations

Logging is a severe test of a sleigh.

Therefore it pays to buy the best—one that has stood the test of time and hard usage—even though the first cost may be considerably more than one which may look just as good.

Bain Sleighs are Famous for Light Draft and Great Capacity

The Bain One-Beam Midland Sloop Sleigh

Clearance under Beam 7 in.

Steel shoes, short reach coupling; the blocks on runners give great strength; 2 ft. 10 in. or 3 ft. track.

The Bain Improved Sloop Sleigh

Clearance under Beam 7 in.

Steel shoes, short reach coupling, 3 ft. track.

The Bain One-Beam North Shore Bob Sleigh

Clearance under Beam 9 1/4 in.

Steel shoes, swing bunks or Bolsters; cross chain coupling; 2 ft. 10 in., or 3 ft. track.

The Bain Improved One Beam Bob Sleigh

Clearance under Beam 9 1/4 in.

Steel shoes, flexible rear bob; 2 ft. 10 in. or 3 ft. track.

The Bain North Shore Sloop Sleigh

Clearance under Beam 7 in.

Steel shoes, cross chain coupling; 2 ft. 10 in. or 3 ft. track.

The Bain Heavy Sloop Sleigh

Clearance under Beam 7 in.

Steel shoes, short reach or cross chain coupling; 3 ft. 4 in., 4 ft. 4 in., or 4 ft. 8 in. track.

Massey-Harris Saw Outfits

Stationary or Portable, driven by the reliable Massey-Harris Gasoline Engine, for sawing Cordwood, Pulpwood, Poles, etc.

Massey-Harris Engines

Graton & Knight

Standardized Series Leather Belting

Tanned by us for belting use

Triple Insurance

A Belt is a beast of burden that can spill a large part of its load without your eye perceiving it.

Here is a belt travelling at a speed of more than a mile a minute. It operates completely around the pulleys 70 times every 60 seconds. At more than a revolution per second, think how even little leaks would foot up a big total if this were not the proper belt for the work to be done.

All Graton & Knight Standardized Series Leather Belts give triple insurance against power leaks because, first, they are made of leather, the one belting material that has the right degree of elasticity to give and take up its tension, and the best of pulley-gripping qualities. Second, this leather is tanned in our own

tannery, specifically for belting purposes. Third, our belts are graded into a Standardized Series which includes belts specifically for every power transmission need. Each is standardized in its manufacture and standardized for its work.

Selecting the proper belt and judging of its efficiency is not a job for guesswork or for the naked eye. It is a true engineering problem. Many of the best belted plants ask us to specify the belting for every pulley drive. Try the plan yourself. Then, when buying, call for "Graton & Knight——Brand or equal." This won't commit you to buying our belts. It will put your buying on the one basic consideration—the work to be done.

Write for Book, "Standardized Leather Belting."

Canadian Graton & Knight, Limited MONTREAL, CANADA

Representatives in Canada:

THE CANADIAN FAIRBANKS-MORSE CO., LIMITED

St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, Vancouver, Victoria.

By means of standardized methods of grading and manufacture, together with extensive investigations in our Engineering Laboratory, our Engineers are able to specify the correct belt for a given drive. Tests show that a 14 to 16 ounce belt should be rated at not more than 90% of the capacity of a 16 to 18 ounce belt. Consult our Engineering Department.

Here is a 34" Graton & Knight 2-ply Belt 82½ feet long. It was installed in December, 1915, in the plant of The Powell Lumber Co., Lake Charles, La. 14 ft. Drive Pulley, 136 R. P. M. 52" Driven Pulley. Belt Speed 5900 F. P. M. 443 horse power. The cost per horse power per week to date is 1-1/3 cents with several more years service to come.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

Write for copy of our catalogue,
"Refractory Efficiency Engineering."

DIXIE DRAG SAW

A 4 H. P. Portable Single Cylinder 2 Cycle, Gasoline Rig, upon skids. Weight, 280 Lbs. Makes 125 strokes per minute. Cuts Logs 7" to 72" Diameter.

Easily started and moved. Runs as smoothly as the Liberty Motor. The Solution of the present and future Fuel, Labor and Car Shortage. Economical of fuel and never grows weary.

Saves Labor. May be taken to the Forest for cutting Logs, Fuel and Short Bolts for Stave, Heading, Shingle Bolts, Handle, Charcoal and Alcohol Wood.

When not required for sawing, Dixie Engine may be used for driving Pumps, Dynamos, Churn, Feed Cutters, Mixer, etc.

Price \$225.00

Extra 5 ft. or 6 ft. Saws, each \$12.00

Extra 6½ ft. or 7 ft. Saws, each \$14.00

**The
Comfortable**

Pad

the easiest
to manipulate

Most comfortable for the horse because it is properly fashioned and stuffed to insure the animal against injurious galls and bruises. Be sure to examine the patent hook attachment; it insures the use of the Pad long after the fabric has been weakened by constant wear.

You will be wanting a warm glove that will stand the wear of hard work. Here it is—ask your jobber.

The answer to all belting problems

→ **GOODHUE BELTING**

With the genuine "Goodhue" on your wheels there will be fewer belting problems.

The power will be transmitted with a smoothness, and there will be a lack of stretching and skidding; a factor in giving you 100% of power efficiency.

"EXTRA" "STANDARD" "ACME WATERPROOF"

The above brands are unequalled—each for its own purpose. "ACME" is ideal where dampness and trying conditions are encountered.

"GOODHUE" BELTS are all made from the best selected PACKER HIDES, well tanned and stretched, with the stretcher ends cut off, and only stretched portion going into the belt.

Write for price and information. If you have any belting troubles let us solve them.

REMEMBER "GOODHUE"—the sure thing in belting.

VANCOUVER

Province of Quebec

TIMBER LANDS

License or permission to cut timber on public lands in this Province is acquired at public auction, after due notice has been given, subject to a yearly ground rent per square mile of \$6.50 for the years 1919-20 to 1923-24 both inclusive and of \$8.00 for the years 1924-25 to 1928-29 both inclusive.

The timber cut in virtue of such license is subject to a tariff of dues fixed by order in council.

Licensees are forbidden to cut on Crown lands trees less than a fixed diameter.

The Regulations also provide that all timber cut on Crown lands must be manufactured in Canada.

In the event of a licensee wishing to transfer his rights, he is at liberty to do so under certain conditions, namely, the paying of a fee of \$4 per square mile.

There are at present time about 75,000 square miles of forest lands under license and over 150,000 miles in the possession of the Crown.

WATER POWERS

To obtain authorization for the utilization of a Water-Power in the Province of Quebec, application should be made to the Honourable Minister of Lands and Forests.

Water-Falls capable of developing over 200 H.P. are granted under emphyteutic leases, the conditions of which are upon the following lines:

1.—Duration of the lease, from 25 to 99 years, according to the importance of the water-power and to the amount of capital required for its development.

2.—Payment of a yearly rental which does not vary during the term of the lease, for the land granted, counting from the date when the contract was signed.

3.—An additional yearly charge of from 10 to 25 cents per H.P. developed, according to the geographical situation of the site of the water-power; such charge being payable from the time the power is produced.

4.—The charge referred to in article 3 is subject to revision every 21 years, counting from the signing of the contract.

5.—Delay of 2 years for beginning works and 2 further years for producing power.

6.—The lessee to make a deposit in money or in securities as a guarantee of good faith for the carrying out of the contract. Such deposit may be forfeited if the conditions are not fulfilled; but, in the contrary case, it may be refunded after a certain time.

7.—Lastly, the grantee must submit plans of his works, mills, etc., to the Department previous to their installation, and, when such installation is completed, he must keep the Department informed as to the quantity of power produced.

Lessening the Worries of Factory Chiefs

Trimming down Factory Overhead and keeping plants running without interruption from Belt trouble—thus lessening the worries of factory chiefs—is the specific purpose for which

DUNLOP **"Gibraltar RedSpecial"** **BELTING**

was specially designed. We believe "Gibraltar RedSpecial" is the one Belt that will unfailingly solve your Belt problems. Its superiority is of no haphazard origin, but the result of twenty-five years' careful workmanship and adequate experimentation.

Its construction embodies none but the highest grade rubber, compounded to indefinitely retain its pliability. The duck used is specially woven, of tremendous tensile strength. The result is observed in the wonderful tenacity, the enduring flexibility and the absolute uniformity throughout for which

"Gibraltar RedSpecial" is deservedly famous. The rich quality of the rubber insures against drying out or rotting, waterproofs the duck, holds the plies securely together and minimizes internal chafing.

The Dunlop Unreserved Guarantee

If you have a difficult drive anywhere in your factory, drop a line to our Head Office, or to our nearest branch, and we shall send a man experienced in belt engineering to consider your requirements. If it is an instance where "Gibraltar RedSpecial" Belting may be suitably employed we shall recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm manufacturing rubber products.

EVANS, COLEMAN & EVANS

FOR mills of medium capacity, we recommend our "Standard" Edgers for edging lumber rapidly and accurately. Note that the machine here shown is self-contained, being mounted on a base cast in one piece. This means that the machine must remain in perfect alignment. Years of use have proven the worth of these machines.

Saw Mill Machinery

Bandmills

IN CANADA, where lumbering is industrially of first importance, timber sawing has been developed to its highest efficiency. As a result, Canadian sawmills are among the fastest cutting in the world. WATEROUS EQUIPMENT is used in nearly all of them.

Sixteen Waterous Circular Mills were in use in England during the war, cutting timber for the War Office. Some of them designed to cut 15,000 feet daily—under high pressure turned out as much as 45,000 feet every ten hours. Such performance is the real test of endurance and sturdiness.

WATEROUS MACHINERY is built with a big margin of speed and strength. It includes every machine for the sawmill, either band or circular type, and is built to handle every variety of timber up to the largest and heaviest being cut.

Carriages

Established

1844

WATEROUS MILLS are operating in India, Japan, New Zealand, Chili, Peru, South Africa, Roumania, Straits Settlements. We know how to build and pack machinery for export. Thirty years' experience has taught us.

Whether it is a portable outfit or a mill cutting 500,000 feet daily, we can supply it. Full information, plans and prices and catalogues sent anywhere on request. Write to nearest agency.

Serviceable Clothing FOR LUMBERMEN

Clarke's Shirts and Mackinaws

Where the Work is Strenuous

is when Clarke's clothing is best appreciated. Our shirts and mackinaws are worn in great numbers throughout the lumber camps of Canada, and there are good reasons for their popularity. They are made to stand the strain of rough wear, are correctly proportioned to give the utmost comfort and are manufactured from materials that give warmth without undue weight.

See that you send your next order for clothing to Clarkes, the lumberman's outfitters.

Get prices and particulars in the meantime.

Doing Our Best

We are doing our best to ship all orders out on time but it keeps us busy.

The demand for lumber is enormous. Our sales for August, 1919, were over 100 per cent larger than in August, 1918.

Why do we keep on growing? Because there is value in every order we fill,—satisfaction in every car we ship.

Early cut 1919 stocks are complete now.

What do you need?
